Executive Summary

Environmental Media	Actual or Probable Exposures On-Site?		Actual or Probable Exposures Off-Site?		Have notifications for actual or probable exposures been completed? (§350.55(e))		
	Yes	No	Yes	No	Yes	No	N/A
Soil		X		X			X
Groundwater		X		X			X
Sediment		X		X			X
Surface Water		X		X			X

Is there, or has there been, an affected or potentially affected water well? ___ Yes _X_ No

If yes, what is the well used for? _____

Actual land use: On-site: ___ Res _X_ C/I Off-site affected property: ___ Res ___ C/I _X_ N/A

Land use for critical PCL determination: On-site: ___ Res _X_ C/I Off-site affected property: ___ Res ___ C/I _X_ N/A

Did the affected property pass the Tier 1 ecological exclusion criteria checklist? _____ Yes _X_ No

Affected groundwater-bearing unit(s) (in order from depth below ground surface), or uppermost groundwater-bearing unit if none affected

Unit No.	Name	Depth below ground surface (ft)	Resource Classification (1, 2, or 3)
1	Zone A	10-20	3
2			
3			

Assessment

Environmental Media		Assessment Levels Exceeded?						Affected property defined to RAL?			Is COC extent stable or expanding?	General classes of COCs (VOCs SVOCs, metals, etc.)
		On-Site?			Off-Site?							
		Yes	No	Not sampled	Yes	No	Not sampled	Yes	No	N/A		
Soil	Surface		X				X	X				Metals, Uranium, Radium 226/228/Combined
	Subsurface			X			X			X		
Groundwater			X				X	X				Metals, Uranium, Radium 226/228/Combined, Fluoride
Sediment			X				X	X				Metals, Uranium, Radium 226/228/Combined
Surface Water			X				X	X				Metals, Uranium, Radium 226/228/Combined

NAPL Occurrence Matrix

		NAPL Occurrence	Description
NAPL in vadose zone	X	No NAPL in vadose zone	There is no direct or indirect evidence of NAPL in the vadose zone
		NAPL in/on soil	NAPL detected in or on unsaturated, unconsolidated clay-, silt-, sand-, and/or gravel-dominated soils
		NAPL in fractured clay	NAPL detected in fractures of unsaturated fine-grained soils
		NAPL in fractured or porous rock	NAPL detected in unsaturated lithologic material
		NAPL in karst	NAPL detected in karst environment
NAPL at capillary fringe	X	No NAPL at capillary fringe	There is no direct or indirect evidence of NAPL at the capillary fringe
		NAPL at capillary fringe	NAPL detected at vadose-saturated zone transition, capillary fringe (in contact with water table)
NAPL in saturated zone	X	No NAPL in saturated zone	There is no direct or indirect evidence of NAPL in the saturated zone
		NAPL in soil	NAPL detected in saturated unconsolidated clay-, silt-, sand-, and/or gravel-dominated soils
		NAPL in fractured clay	NAPL detected in fractures of saturated fine-grained soil or other double-porosity sediments
		NAPL in saturated fractured or porous rock	NAPL detected in saturated lithologic material
		NAPL in saturated karst	NAPL detected in karst environment within the saturated zone
NAPL in surface water or sediment	X	No NAPL in surface water or sediment	There is no direct or indirect evidence of NAPL in surface water or sediments
		NAPL in surface water	NAPL detected in surface water at exceedance concentration levels or visual observation
		NAPL in sediments	NAPL detected in sediments at exceedance concentration levels or visual observation via migration pathway or a direct release

Remedy Decision

Environmental Media		Critical PCL exceeded on-site?			Critical PCL exceeded off-site?			PCLE zones defined?			General class (VOCs, SVOCs, metals, etc.) of COCs requiring remedy
		Yes	No	N/A	Yes	No	N/A	Yes	No	N/A	
Soil	Surface		X				X			X	
	Subsurface			X			X			X	
Groundwater			X				X			X	
Sediment			X				X			X	
Surface Water			X				X			X	

NAPL Triggers

NAPL Response Action Triggers		Description of Triggers
X	No NAPL response action triggers	No NAPL triggers have been observed in any assessment zones (vadose, capillary fringe and saturated), nor in surface water or sediments
	NAPL vapor accumulation is explosive	NAPL vapors accumulate in buildings, utility and other conduits, other existing structures, or within anticipated construction areas at levels that are potentially explosive (≥ 25% LEL)
	NAPL zone expanding	NAPL zone is observed to be expanding using time-series data
	Mobile NAPL in vadose zone	NAPL zone is observably mobile, or is theoretically mobile based on COC concentrations and residual saturation
	NAPL creating an aesthetic impact or causing nuisance condition	NAPL is responsible for objectionable characteristics (e.g., taste, odor, color, etc.) resulting in making a natural resource or soil unfit for intended use
	NAPL in contact with Class 1 groundwater	NAPL has come in actual contact with saturated zone or capillary fringe of a Class 1 GWBU
	NAPL in contact with Class 2 or 3 groundwater	NAPL has come in actual contact with saturated zone or capillary fringe of a Class 2 or Class 3 GWBU
	NAPL in contact with surface water	Liquid containing COC concentrations that exceed the aqueous solubility in contact with surface water via various migration pathways or direct release to surface water
	NAPL in or on sediments	Liquid containing COC concentrations that exceed the aqueous solubility impact surface water sediments via migration pathway or a direct release

Conclusions and Recommendations

Project Background and Scope of Investigation

Copano Enterprises LLC (dba CE Ranch, LLC in Texas) (CE) owns and operates the Site in San Patricio and Aransas Counties, Texas. CE and the Texas Commission on Environmental Quality (TCEQ) entered into a 9019 Settlement Agreement (the Agreement) on May 21, 2018 that outlines various environmental and other requirements, including requirements related to Site groundwater. Following TCEQ's approval of a Preliminary Groundwater Assessment Report and Drinking Water Survey Report for the Site, TCEQ requested the submission of an Affected Property Assessment Report (APAR).

This APAR specifically addresses the bauxite residue disposal areas (RDAs), which includes Beds 1, 2, 3, and 4 at the Site. Investigation activities have been conducted at the perimeter areas of the RDAs and on adjacent areas at the Site by Golder Associates Inc. (Golder) to generate the data necessary to prepare this APAR.

This investigation has been conducted to evaluate concentrations of metals, radium 226/228/combined, uranium, and fluoride in soil, groundwater, surface water, and sediment and to determine the groundwater resource classification.

Affected Property Assessment Results

No assessment levels were exceeded in the samples of soil, groundwater, surface water, and sediment collected at the Site. There is no affected property. No response action is required.

Response Actions, Recommendations, Conclusions

No response action is required.

COPANO ENTERPRISES LLC, dba CE RANCH LLC
AFFECTED PROPERTY ASSESSMENT REPORT
FOR THE
COPANO SITE (BEDS 1-4)

CHRONOLOGY

June 29, 2020	APAR submitted to TCEQ.
April 24, 2020	Class 3 Groundwater Demonstration Report submitted to TCEQ to ensure early TCEQ concurrence with groundwater classification for use in the APAR.
June 2019 – June 2020	Field work in support of the APAR. Four quarters of groundwater monitoring conducted. Surface soil, sediment, and surface water sampling conducted.
June 10, 2019	TCEQ approves the Revised PGAR and Revised DWS. TCEQ requests the submission of an Affected Property Assessment Report (APAR).
May 24, 2019	Revised DWSR submitted to TCEQ.
May 3, 2019	Revised PGAR and Tier I Ecological Exclusion Criteria Checklist submitted to TCEQ.
April 9, 2019	TCEQ submits comments on the DWSR.
April 3, 2019	Drinking Water Survey Report (DWSR) submitted to TCEQ.
March 5, 2019	TCEQ submits comments on the PGAR and requests the performance of a Drinking Water Survey. A completed Tier I Ecological Exclusion Criteria Checklist is also requested.
November 5, 2018	Preliminary Groundwater Assessment Report (PGAR) submitted to TCEQ.
September 2018	Preliminary Groundwater Assessment conducted. Installation of monitoring wells and piezometer wells adjacent to the perimeter containment dikes of Beds 1-4 to assess potential COCs present in the groundwater bearing units underlying the Site. Four piezometer wells were completed in the uppermost groundwater bearing unit (Zone A). Nine monitoring wells and five piezometer wells were completed in the lower groundwater bearing unit below Zone A (Zone B).
May 18, 2018	Copano Enterprises LLC (dba CE Ranch, LLC in Texas) enters into a 9019 Settlement Agreement that outlines various environmental and other requirements, including requirements related to Site groundwater.

Specialized Submittals Checklist

____ **Check here if no specialized submittals in this report**

	If included, specify section or appendix
Ecological Risk Assessment	
Reasoned justification, expedited stream evaluation, Tier 2 or 3 ecological risk assessment, and/or proposal for ecological services analysis	Section 9
Statistics	
Calculated site-specific background concentrations	Section 9
Used alternate statistical methods to determine proxy values for non-detected results (§350.51(n))	
Calculated representative concentrations (§350.79(2)) for remedy decision	
Analytical Issues	
Used SQL for assessment or critical PCL instead of the MQL (§350.51(d)(1)) or PCL (§350.79)	
The MQL of the analytical method exceeds assessment levels/critical PCLs (§350.54(e)(3))	
Human Health/Toxicology	
Variance to exposure factors approved by TCEQ Executive Director[1] (§350.74(j)(2))	
Developed PCLs based on alternate exposure areas	
Evaluated non-standard exposure pathway (e.g., agricultural, contact recreation, etc)	
Combined exposure pathways across media for simultaneously exposed populations (§350.71(j))	
Adjusted PCLs due to residual saturation, cumulative risk, hazard index, aesthetic concerns, or theoretical soil vapor	
Utilized non-default human health RBELs to calculate PCLs (includes use of non-default parameters, toxicity factors not published in rule, etc.) (§350.51(l), §350.73, §350.74)	
Calculated Tier 2 or 3 RBELs/PCLs or TSCA levels for polychlorinated biphenyls, or calculated Tier 2 or 3 RBELS/PCLs for cadmium, lead, dibenzo-p-dioxins, dibenzofurans, and/or polycyclic aromatic hydrocarbons	
Calculated Tier 1, 2, or 3 total petroleum hydrocarbon (TPH) PCLs	
Developed sediment/surface water human health RBELs and PCLs	
Fate and Transport	
Used or developed groundwater to surface water dilution factors	
Calculated Tier 2 PCL	
Calculated Tier 3 PCL	
Groundwater Issues	
Conducted aquifer test, classified Class 3 groundwater, or determined non-groundwater bearing unit (saturated soil)	Appendix 7

[1] Prior approval by Executive Director is required.

Section 1 Property Information

1.1 Physical Location

1.1.1 Property Location and Land Use

CE owns and operates the Copano Property (the Site) located east of the intersection of State Highway 136 and Co. Rd. 93 in San Patricio and Aransas Counties, Texas. The Site extends over approximately 11,000 acres. Land use in the surrounding areas is predominantly industrial and agricultural. There are isolated residential properties located near the Site. The nearest city is the City of Gregory, located approximately eight miles south of the Site (Figure 1A-1).

1.1.2 Topography and Weather

The Site is located on a flat coastal plain. Topographic changes are generally associated with the four separate surface impoundments (called Beds 1, 2, 3 and 4) at the Site. The elevation of the property and surrounding area ranges from approximately 5 to 20 feet above mean sea level (ft. msl). The dike crest elevation of Beds 1-4 ranges from approximately 29.5 to 36 ft. msl. The interior bauxite residue surface at Bed 1 crests at approximately 55 ft. msl.

The Site is bordered to the north and east by Copano Bay and Port Bay, respectively (Figure 1A-1). Elevations are the highest at Beds 1-4 and decrease radially away from the impoundments, gently sloping towards the shorelines of Copano Bay and Port Bay. The Site is not located in the 100-year flood plain.

Bed 1: Bed 1 is approximately 838 acres in size with containment dikes that crest at approximately 29.5 ft. msl. The decant pond is located approximately 300 ft. southeast of Bed 1.

Bed 2: Bed 2 is approximately 1,203 acres in size with containment dikes that crest at approximately 29.5 ft. msl. A fence and TX-188 are located approximately 700 ft. due north of Bed 2.

Bed 3: Bed 3 is approximately 412 acres in size containment dikes that crest at approximately 32 ft. msl. A fence and TX-188 are located approximately 750 ft. due south of Bed 3. A fence and Copano Retreat Rd. are located approximately 750 ft. northwest of Bed 3.

Bed 4: Bed 4 is approximately 697 acres in size with containment dikes that crest at approximately 36 ft. msl. From the base of the dike, the topography around Bed 4 is relatively flat and slopes gently towards the surrounding water bodies - Freshwater Lake, located approximately 650 ft. to the northwest; Swan Lake, located approximately 1,500 ft. to the north/northeast; and Port Bay, located approximately 6,500 ft. to the east. A fence and TX-188 are located approximately 750 ft. due south of Bed 4. A fence and Copano Retreat Rd. are located approximately 750 ft. southeast of Bed 4.

The area typically receives minimal consistent rainfall, but occasional storm systems can bring high intensity rainfall in short periods of time.

1.2 Affected Property and Sources of Release

1.2.1 History and Operations

The entire Copano Property consists of more than 11,000 acres. Beds 1, 2, 3 and 4 cover approximately 3,100 acres (Figure 1B). The dikes of the impoundments were reportedly constructed using native clays taken from shallow excavations on the property, and keyed into the underlying, approximately 20-ft thick clay layer. From the time period of 1969 until 2016, bauxite residue was pumped to the Site via pipelines from an alumina refinery located approximately 10 miles to the south of the Site on Corpus Christi Bay.

Bed 1: Bed 1 began operation in 1969 as a residue disposal area (RDA) for bauxite residue. Residue disposal in Bed 1 was ceased in 2016. Bed 1 is not an active RDA.

Bed 2: Bed 2 began operation in 1972 as an RDA for bauxite residue. Bed 2 is not an active RDA.

Bed 3: Bed 3 began operation in 1978 as an RDA for bauxite residue. Bed 3 is not an active RDA.

Bed 4: Bed 4 began operation in 1981 also intended for use as an RDA for bauxite residue, but was instead primarily only used for water management, i.e. receiving excess surface water from Bed 2. Bed 4 is not an active RDA.

1.2.2 Project Overview

CE owns and operates the Site in San Patricio and Aransas Counties, Texas. CE and the TCEQ entered into a 9019 Settlement Agreement (the Agreement) on May 21, 2018 that outlines various environmental and other requirements, including requirements related to Site groundwater.

A draft Preliminary Groundwater Assessment Report (PGAR) was prepared by Golder and submitted to the TCEQ on November 5, 2018 (Golder, 2018). The report described the procedures/results to address the groundwater assessment requirements of the Agreement. The PGAR was based on TRRP Tier 1 Protective Concentration Limits (PCLs) ($^{GW}GW_{Class\ 1\ 2}$) for the Site COCs (i.e., action levels). This comparison showed that radium 226/228/combined, uranium, and fluoride were measured at concentrations exceeding their respective action levels in groundwater samples collected from several monitoring wells. TCEQ provided comments (dated March 5, 2019) on the report requesting certain revisions and requesting the performance of a Drinking Water Survey in accordance with TCEQ Guidance (RG-428) (TCEQ, 2019a & 2019b). The March 5, 2019 TCEQ comment letter also requested a completed Tier I Ecological Exclusion Criteria Checklist.

A Final PGAR was prepared by Golder and submitted to the TCEQ on May 3, 2019 (Golder, 2019a). The final PGAR provided the Tier I Ecological Exclusion Criteria Checklist as Appendix A and is included in this report as Attachment 2A.

A Drinking Water Survey Report (DWSR) was submitted to TCEQ on April 3, 2019 (Golder,

2019b). After receiving comments on the DWSR (TCEQ, 2019c), a Revised DWSR was submitted to the TCEQ on May 24, 2019 (Golder, 2019c) and documented that no privately-owned drinking water wells were located within a 0.25-mile radius of the Site. The TCEQ approved the Revised DWSR and Final PGAR in a letter dated June 10, 2019 and requested the submission of an Affected Property Assessment Report (APAR) for the Site (TCEQ, 2019d).

A Class 3 Groundwater Demonstration Report was submitted to the TCEQ on April 28, 2020 (Golder, 2020) and approved on May 14, 2020 (TCEQ, 2020).

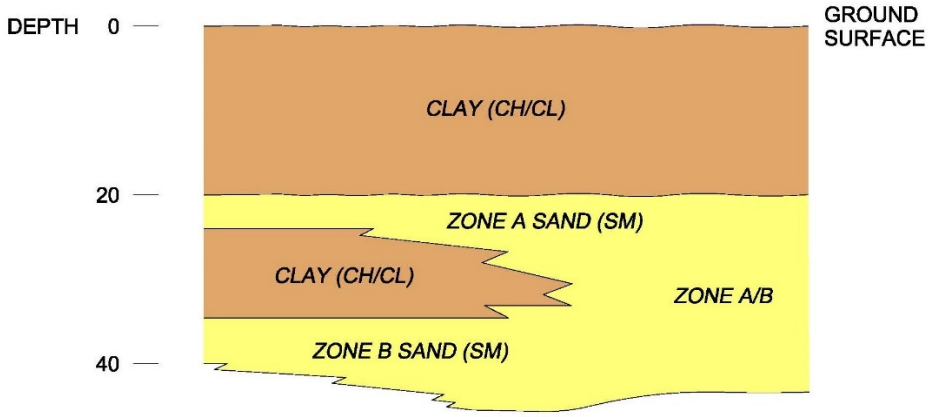
This APAR specifically addresses the RDAs, which includes Beds 1, 2, 3 and 4 at the Site. Samples of groundwater were collected from the groundwater monitoring network at the Site, which currently consists of 34 monitoring wells (Figure 1B) that surround the Beds. Surface soil was sampled from 44 locations surrounding the Beds. Sediment and surface water samples were collected at six locations from two surface water bodies located north/northwest of Bed 4.

This investigation has been conducted to evaluate concentrations of metals, radium 226/228/combined, uranium, and fluoride in soil, groundwater, surface water, and sediment and to determine the groundwater resource classification.

1.3 Geology/Hydrogeology

1.3.1 Regional Geology/Hydrogeology

The Site is located in the Gulf Coast Plain Province of Texas. The stratigraphy of the Gulf Coast Plain consists of a thick sequence of fluvial-deltaic sediments deposited as a wide belt generally trending northeast parallel to and dipping gently toward the present Gulf Coast. The fluvial-deltaic sediments consist of alternating sequences of unconsolidated to partially consolidated silt, clay, and sand. The formations present in the regional vicinity of the property include, from shallowest to deep, Holocene and Pleistocene alluvium, the Beaumont Formation, the Lissie Formation, the Goliad Formation, the Fleming Formation, and the Oakville Formation (Baker, 1979) (Ryder, 1991) (Figure 1C and Figure 1D).



In this region of the Gulf Coast Plain, the stratigraphic units containing fresh to slightly saline water are the recent alluvium, the Beaumont Formation, the Lissie Formation, and the Goliad Formation. However, in the vicinity of the Site, all of these stratigraphic units [including the shallowest water bearing units at the Site (Zone A and Zone B)] are saline and are not used for any purpose. Much of the groundwater in Aransas and San Patricio County has naturally occurring high total dissolved solids content that exceeds drinking water standards and Department of Agriculture irrigation standards. Since 1965, the development of groundwater resources for public water supply has not been pursued, and cities in Aransas and San Patricio County (Rockport, Fulton, Aransas Pass, Ingleside, Gregory, Portland, Odem, and Taft) have relied on surface water from Lake Corpus Christi for public water supply (Shafer, 1968). Lake Corpus Christi is located 40 miles to the west-northwest of the Site.

1.3.2 Site Geology/Hydrogeology

Investigations at the facility have provided information about the Site subsurface geology and hydrogeology. In general, subsurface strata are part of the Quaternary (Pleistocene) Beaumont Formation, which consists of mostly clay, silt, sand and gravel deposited in stream channel,

point bar, natural levee, and backswamp depositional environments. Subsurface complexity arises from the interbedded nature of these deposits, resulting from the various depositional environments of the Beaumont Formation. Multiple sand units are present in the subsurface that are typically separated by a clay layer (i.e., aquitards).

The surface soil observed at the Site is a medium to high plasticity clay that extends to a depth of approximately 20 feet below the ground surface. Beneath this surface clay is the uppermost water-bearing zone (termed Zone A) that varies from a silty to clayey sand, ranging in thickness from just a few feet to over 20 feet, and typically containing interbedded layers of clay and silty clay. A deeper water-bearing zone (Zone B) is present beneath Zone A, being separated by a layer of clay ranging from just a few feet thick to over 10 feet. Zone B typically occurs as a silty sand, but occasionally as a clayey sand and also varies in thickness from a few feet to over 20 feet. Occasionally, the clay layer between Zones A and B is absent, and a thick sequence of sand with interbedded clay and silty clay represents Zone A/B. Both zones have high total dissolved solid (TDS) concentrations. The subsurface stratigraphy is shown on the generalized section below.

The stratigraphic units encountered at the Site, from shallowest to deepest, are summarized below:

- Unit 1 – Represents the clay/silty clay layer overlying the uppermost water-bearing unit. The top of Unit 1 occurs at approximately 10 to 15 ft. msl. The thickness of the clay is approximately 9 to 21 ft. The permeability of Unit 1 is less than 1x10-7 cm/s, based on historic tests conducted (Dames and Moore, 1979) on samples of the Unit 1 materials at Bed 4 and on available literature relating the Beaumont Formation.
- Zone A – Represents the shallowest near-surface water-bearing unit at the site. Zone A, a fine-to medium-grained, silty sand to sand, ranges from approximately 2 to 20 ft. in thickness and the top of Zone A occurs at approximately 2 to -12 ft. msl. Groundwater (Class 3) occurs under confined conditions in Zone A. Based on slug tests conducted by Golder in 2019, the hydraulic conductivity of Zone A ranges from 1.3 x 10-3 cm/s to 7.1 x 10-4 cm/s.
- Unit 2 – A silty clay to high plasticity clay layer between Zone A and Zone B. The thickness is approximately 1 to 15 ft. and the top of Unit 2 occurs at approximately 0 to -20 ft. msl. Laboratory permeability tests of clays indicate a hydraulic conductivity range of 1.31 x 10-7 cm/s to 1.4 x 10-8 cm/s (National Soil Services, Inc., 1968). The thickness and low hydraulic conductivity of the clay would be expected to significantly

impede downward COC migration.

- Zone B – Represents the next deepest water-bearing unit. Zone B, a fine-to medium-grained, silty sand to sand is approximately 2 to 20 ft. in thickness and the top of Zone B occurs at approximately -15 to -27.5 ft. msl. Groundwater (Class 3) occurs under confined conditions in Zone B.
- Unit 3 – This sandy, medium plasticity clay layer is the deepest geologic unit encountered during the well installations. The top of Unit 3 occurs at approximately -21 to -44 ft. msl and its thickness was not determined.

Groundwater in Zones A and B occurs in a confined condition within the sand units, i.e., the water level in a well is at a higher elevation than the top of the sand unit at that well location. Lateral groundwater flow in the upper water-bearing units ranges in direction from northeast to southeast towards Copano and Port Bays (Figures 5A-1 through 5A-2). The magnitude of the hydraulic gradient in Zone A is approximately 4.2E-04 to 1.1E-03 ft/ft. The magnitude of the hydraulic gradient in Zone B is approximately 5.0E-04 to 8.0E-04 ft/ft. Water-levels in the monitoring wells at the Site fluctuate as much as approximately two feet over a quarter of a year. Typically, quarterly water-level fluctuations are less than one foot (Table 5D).

Chemical properties of Zone A and Zone B groundwater were evaluated by analyzing for common chemical constituents (e.g., major cations and anions), metals, and radionuclides, and by measuring several parameters in the field (pH, specific conductance, alkalinity, oxidation-reduction potential, etc.). Review of these data (Tables 5B-1 and 5B-2) indicates that groundwater in Zone A and B is typical of shallow coastal environments. In general, TDS concentrations are high; bicarbonate alkalinity concentrations are low (<500 mg/L); sulfate concentrations are high; calcium, potassium and magnesium concentrations are high; pH is circum-neutral; and oxidation-reduction potential is positive.

Table 1A. Sources of Release (see input values on preceding page)

Affected property name/ number[1]	Name of potential source[2] (supplied by the person)	Type of potential source (select from Column 1 on Inputs list)	NOR unit or SWMU number, if applicable	Substances of potential concern (select from Column 2 on Inputs list)	Size of source (capacity, area, or volume)	Status of source (select from Column 3 on Inputs list)		Was a release from this source confirmed? (if yes, indicate the discovery method from Column 4 on Inputs list, and date release was discovered)			
						Status[3]:	If closed or other, list date closed or explain:	No	Yes	Discovery method	Date
N/A[4]	Bed 1	Surface Impoundments/ ponds, lagoons	NOR #30097, Unit #005	Metals, Uranium, Radium 226/228/combined	838-acre area	Inactive		X

Section 2 Exposure Pathways and Groundwater Resource Classification

Section 2.1 Source(s) of Potable Water for On-Site Property and Affected Off-Site Properties

Potable water is supplied to the Site by the San Patricio Municipal Water District from Lake Corpus Christi (Segment 2103), located 40 miles west-northwest of the Site. There are no potable water wells on or in the immediate vicinity (0.5 mi.) of the Site (See Section 2.3).

Section 2.2 Field Receptor Survey

Walking field surveys at the Site were conducted in the areas within 500 ft of the potentially affected properties. A decant pond is located approximately 300 ft. southeast of Bed 1. Bed 2 is bordered on the north by TX-188, and Bed 3 and Bed 4 are north of TX-188. Copano Retreat Rd. runs between Bed 3 and Bed 4. The results of the receptor survey are discussed in Section 2.4.

Section 2.3 Records Survey

Golder reviewed federal, state, and local environmental records pertaining to the Site. Database records were obtained through a record search performed by Banks Environmental Data (Banks). Banks reviewed available records made public by the state of Texas at the TCEQ, the Texas Water Development Board (TWDB) and the United States Geological Survey (USGS) to identify the approximate location of public and private water wells within the requested Area of Review (AOR) (within a 0.5 mile radius of the Site). Banks researched the located wells and plotted water wells identified on county highway maps or USGS 7.5-minute topographic maps at the TWDB. Banks transferred the approximate water well locations onto a map for review (Banks, 2018).

The wells shown as being within the 0.5-mile radius of the RDAs were further evaluated to verify their existence and location. The verification process included a review of water well searches conducted at the Site and adjacent properties and communications with off-site property owners regarding the presence of wells. In general, the database/map provided by Banks was found to be very inaccurate. Numerous wells identified in the Banks report were found to be plotted in incorrect areas. Through the verification process it was determined that just three water wells are present within the 0.5-mile radius of the RDAs. These water wells are capped inactive stock wells on the Copano Property and are not used for private drinking water. Other wells listed in the Banks report were found to be plugged and abandoned or were oil field supply wells no longer in operation or no longer present. No potable water wells were identified within the 0.5-mile search radius of the affected property. The areas within the search radius are provided water by the San Patricio Municipal Water District which utilizes surface water from Lake Corpus Christi. In addition, no public groundwater supply systems are present in the area.

Please refer to the DWSR (Golder, 2019c) for more information.

Section 2.4 Receptor Survey Results

The area encompassed by a 500 ft. radius around the Beds at the Site consists entirely of industrial or agricultural property owned by CE Ranch LLC. The land surface in the vicinity of the Site is relatively flat. The only significant topographic changes are manmade, i.e. the dikes of Beds 1, 2, 3, and 4. Much of the property is secured by fencing, so access to the Site is limited.

There are two surface water bodies located approximately 500-feet from Bed 3 and Bed 4. The topography east of Bed 3 slopes gently towards Port Bay, which is located approximately 500 ft. east/southeast. The topography northwest of Bed 4 slopes gently towards Freshwater Lake, which is located approximately 500 ft. northwest. Further discussions of the potential human health and ecological exposure pathways are presented in Sections 6, 7, and 9.

As discussed in previous sections, there were no potable water wells identified within 0.5-miles of the Beds. No water tanks, pump houses, windmills, cisterns, or other related permanent structures are within 500 ft of the Beds.

Underground utility surveys were conducted prior to drilling activities in 2018 for the Preliminary Groundwater Assessment at the Site. No underground utilities are present within 0.5-miles of the Beds.

Section 2.5 Groundwater Resource Classification

Zone A and Zone B groundwater at the Site is considered a Class 3 resource based on several lines of evidence (Golder, 2020).

The geographic location of the Site, bordered on two sides by the salt waters of Copano and Port Bay, results in considerable natural salinity of shallow groundwater at the Site. Several processes result in the natural salinity in groundwater, such as tidal influx of salt water, inundation by bay water, residual connate water, infiltration of sea spray, and concentration by evapotranspiration.

Five groundwater sampling events from all 34 monitoring wells have been performed at the Site. Total dissolved solids (TDS) analysis was performed during each event and exceeded 10,000 mg/L for each sample (Table 5B) with one exception (from well MW-1, 8,280 mg/L, sample collected 9/20/2018). Concentrations of total dissolved solids in samples collected from Zones A and B monitoring wells averaged 34,204 and 40,218 mg/L, respectively. In addition, groundwater quality at well locations farthest upgradient in Zones A and B (see Figures 5A-1 and 5A-2, respectively) were further assessed with regard to background conditions. The arithmetic mean of the TDS data reported for MW-9 (Zone A) for the five sampling events is 18,960 mg/L and the arithmetic mean of the TDS data reported for MW-5B (Zone B) for the five sampling events is 23,180 mg/L. These data exceed 10,000 mg/L and meet the naturally occurring criteria for a Class 3 groundwater resource.

The cation and anion data for the monitoring well samples were plotted on a trilinear (piper)

diagram. A review of the diagram indicates that the geochemical signature of Site groundwater is very similar across all samples/wells given the close grouping of the data on the diagram. This indicates that there is no variability of the source of the natural salinity for all the groundwater samples collected from the wells at the Site.

Three water wells were identified within a 0.5-mile radius of the RDA. These wells (State ID 79-63-802, 79-63-801 and 136832) are registered to Copano Enterprises LLC and are located on the Copano Property (i.e., on the 11,000-acre ranch property). These wells are not used for potable purposes.

No water wells were identified within 0.5-mile radius of the Site that supply groundwater for human consumption, agricultural purposes or any purpose which could result in exposure to human or ecological receptors.

In summary, RG-366/TRRP-8 states that a Class 3 groundwater resource designation is applied for groundwater-bearing units (GWBUs) where: i) the natural TDS concentration exceeds 10,000 mg/L, and where: (ii) there is no human or ecological exposure to groundwater from that GWBU within 0.5-miles. Results of the groundwater resource classification evaluation for the Site indicate that the uppermost GWBUs at the Site (Zones A and B) meet the criteria for a Class 3 groundwater resource, as defined by TRRP Rule §350.52(3) and consistent with RG-366/TRRP-8.

Please see the Class 3 Groundwater Demonstration Report (Golder, 2020) for more detailed information.

Section 2.6 Exposure Pathways

Exposure pathways were evaluated based on the geologic and physical characteristics of the affected properties, the extent and concentrations of COCs in various media, and current and anticipated future land use conditions. The potentially complete exposure pathways identified as applicable for this affected property assessment are presented on Table 2C and are detailed below.

Groundwater: Assessment levels and PCLs are based on the $^{GW}GW_{Class\ 3}$ pathway and the objective of this APAR was to delineate the PCL exceedance zones (PCLE zones). There were no exceedances of Class 3 PCLs for groundwater; therefore, the $^{GW}GW_{Class\ 3}$ pathway is considered incomplete.

The surrounding surface water bodies are not hydraulically connected to the uppermost GWBU. As shown on the Figures 4C-1 through 4C-3 and discussed in Sections 6 and 7, there is typically a minimum of four to five feet of clay between the bottom of the surrounding surface water bodies and the top of the uppermost GWBU at the Site. The ^{SW}GW and ^{Sed}GW exposure pathways were considered incomplete. However, surface water and sediment samples were collected at Freshwater Lake and Swan Lake to investigate the effect of atmospheric deposition (i.e. dusting from the Beds) on the surrounding surface water bodies. These pathways are discussed in Section 9.

The $^{Air}GW_{Inh\text{-}V}$ pathway is considered incomplete at the Site.

Surface Soil: The $^{Tot}Soil_{Comb}$ and $^{GW}Soil_{Class\ 3}$ pathways are considered potentially complete for surface soils, defined as soils from ground surface to 15 feet bgs for residential land use (delineation assessment). The $^{GW}Soil_{Class\ 3}$ pathway is the applicable soil-leaching to groundwater pathway since the uppermost GWBU was encountered at the Site and it is considered a Class 3 groundwater resource. The concentrations of COCs in soil samples collected at the Site do not exceed TRRP RALs. Therefore, these pathways are considered incomplete. The $^{Air}Soil_{Inh\text{-}V}$ pathway is considered incomplete at the Site.

Subsurface Soil: Exposure pathways associated with subsurface soil are not considered for this assessment due to the determination of an incomplete surface soil pathway.

Potential ecological receptors were described in the Tier I Exclusion Criteria Checklist (see Attachment 2A) and are evaluated in the Ecological Risk Assessment Review of Soil, Sediment, and Surface Water Data (See Section 9).

Table 2A. Water Well Summary

Well no. / designation	Well owner's name of record	Distance from affected property (ft.)	Screened interval/open interval (ft)	Cemented interval (ft)	Completion type	Total depth	Date drilled	Producing formation	Current water use[1]	Current status[2]	Data source[3]

Attachment 2A	Tier 1 Ecological Exclusion Criteria Checklist
Attachment 2B	Tier 1 Ecological Exclusion Criteria Supporting Docs (refer to Final PGAR (Golder, 2019a))

Figure : 30 TAC '350.77(b)

TIER 1: Exclusion Criteria Checklist

This exclusion criteria checklist is intended to aid the person and the TNRCC in determining whether or not further ecological evaluation is necessary at an affected property where a response action is being pursued under the Texas Risk Reduction Program (TRRP). Exclusion criteria refer to those conditions at an affected property which preclude the need for a formal ecological risk assessment (ERA) because there are **incomplete or insignificant ecological exposure pathways** due to the nature of the affected property setting and/or the condition of the affected property media. This checklist (and/or a Tier 2 or 3 ERA or the equivalent) must be completed by the person for all affected property subject to the TRRP. The person should be familiar with the affected property but need not be a professional scientist in order to respond, although some questions will likely require contacting a wildlife management agency (i.e., Texas Parks and Wildlife Department or U.S. Fish and Wildlife Service). The checklist is designed for general applicability to all affected property; however, there may be unusual circumstances which require professional judgement in order to determine the need for further ecological evaluation (e.g., cave-dwelling receptors). In these cases, the person is strongly encouraged to contact TNRCC before proceeding.

Besides some preliminary information, the checklist consists of three major parts, **each of which must be completed unless otherwise instructed.** PART I requests affected property identification and background information. PART II contains the actual exclusion criteria and supportive information. PART III is a qualitative summary statement and a certification of the information provided by the person. **Answers should reflect existing conditions and should not consider future remedial actions at the affected property.** Completion of the checklist should lead to a logical conclusion as to whether further evaluation is warranted. Definitions of terms used in the checklist have been provided and users are strongly encouraged to familiarize themselves with these definitions before beginning the checklist.

Name of Facility: Copano Enterprises LLC (dba CE Ranch, LLC) (CE), Copano Property

Affected Property Location: San Patricio and Aransas Counties, Texas

Mailing Address: 7037 CR 93, Aransas Pass, Texas, 78336

TNRCC Case Tracking #s: 9019 Settlement Agreement effective May 21, 2018; CN605550557; RN104914312

Solid Waste Registration #s: 30097

Voluntary Cleanup Program #: N/A

EPA I.D. #s: TXD0081289983

Definitions[1]

Affected property - The entire area (i.e., on-site and off-site; including all environmental media) which contains releases of chemicals of concern at concentrations equal to or greater than the assessment level applicable for residential land use and groundwater classification.

Assessment level - A critical protective concentration level for a chemical of concern used for affected property assessments where the human health protective concentration level is established under a Tier 1 evaluation as described in '350.75(b) of this title (relating to Tiered Human Health Protective Concentration Level Evaluation), except for the protective concentration level for the soil-to-groundwater exposure pathway which may be established under Tier 1, 2, or 3 as described in '350.75(i)(7) of this title, and ecological protective concentration levels which are developed, when necessary, under Tier 2 and/or 3 in accordance with '350.77(c) and/or (d), respectively, of this title (relating to Ecological Risk Assessment and Development of Ecological Protective Concentration Levels).

Bedrock - The solid rock (i.e., consolidated, coherent, and relatively hard naturally formed material that cannot normally be excavated by manual methods alone) that underlies gravel, soil or other surficial material.

Chemical of concern - Any chemical that has the potential to adversely affect ecological or human receptors due to its concentration, distribution, and mode of toxicity. Depending on the program area, chemicals of concern may include the following: solid waste, industrial solid waste, municipal solid waste, and hazardous waste as defined in Texas Health and Safety Code, '361.003, as amended; hazardous constituents as listed in 40 Code of Federal Regulations Part 261, Appendix VIII, as amended; constituents on the groundwater monitoring list in 40 Code of Federal Regulations Part 264, Appendix IX, as amended; constituents as listed in 40 CFR Part 258 Appendices I and II, as amended; pollutant as defined in Texas Water Code, '26.001, as amended; hazardous substance as defined in Texas Health and Safety Code, '361.003, as amended, and the Texas Water Code '26.263, as amended; regulated substance as defined in Texas Water Code '26.342, as amended and '334.2 of this title (relating to Definitions), as amended; petroleum product as defined in Texas Water Code '26.342, as amended and '334.122(b)(12) of this title (relating to Definitions for ASTs), as amended; other substances as defined in Texas Water Code '26.039(a), as amended; and daughter products of the aforementioned constituents.

Community - An assemblage of plant and animal populations occupying the same habitat in which the various species interact via spatial and trophic relationships (e.g., a desert community or a pond community).

Complete exposure pathway - An exposure pathway where a human or ecological receptor is exposed to a chemical of concern via an exposure route (e.g., incidental soil ingestion, inhalation of volatiles and particulates, consumption of prey, etc).

De minimus - The description of an area of affected property comprised of one acre or less where the ecological risk is considered to be insignificant because of the small extent of contamination, the absence of protected species, the availability of similar unimpacted habitat nearby, and the lack of adjacent sensitive environmental areas.

Ecological protective concentration level - The concentration of a chemical of concern at the point of exposure within an exposure medium (e.g., soil, sediment, groundwater, or surface water) which is determined in accordance with '350.77(c) or (d) of this title (relating to Ecological Risk Assessment and Development of Ecological Protective Concentration Levels) to be protective for ecological receptors. These concentration levels are primarily intended to be protective for more mobile or wide-ranging ecological receptors and, where appropriate, benthic invertebrate communities within the waters in the state. These concentration levels are not intended to be directly protective of receptors with limited mobility or range (e.g., plants, soil invertebrates, and small rodents), particularly those residing

[1]These definitions were taken from 30 TAC '350.4 and may have both ecological and human health applications. For the purposes of this checklist, it is understood that only the ecological applications are of concern.

within active areas of a facility, unless these receptors are threatened/endangered species or unless impacts to these receptors result in disruption of the ecosystem or other unacceptable consequences for the more mobile or wide-ranging receptors (e.g., impacts to an off-site grassland habitat eliminate rodents which causes a desirable owl population to leave the area).

Ecological risk assessment - The process that evaluates the likelihood that adverse ecological effects may occur or are occurring as a result of exposure to one or more stressors; however, as used in this context, only chemical stressors (i.e., COCs) are evaluated.

Environmental medium - A material found in the natural environment such as soil (including non-waste fill materials), groundwater, air, surface water, and sediments, or a mixture of such materials with liquids, sludges, gases, or solids, including hazardous waste which is inseparable by simple mechanical removal processes, and is made up primarily of natural environmental material.

Exclusion criteria - Those conditions at an affected property which preclude the need to establish a protective concentration level for an ecological exposure pathway because the exposure pathway between the chemical of concern and the ecological receptors is not complete or is insignificant.

Exposure medium - The environmental medium or biologic tissue in which or by which exposure to chemicals of concern by ecological or human receptors occurs.

Facility - The installation associated with the affected property where the release of chemicals of concern occurred.

Functioning cap - A low permeability layer or other approved cover meeting its design specifications to minimize water infiltration and chemical of concern migration, and prevent ecological or human receptor exposure to chemicals of concern, and whose design requirements are routinely maintained.

Landscaped area - An area of ornamental, or introduced, or commercially installed, or manicured vegetation which is routinely maintained.

Off-site property (off-site) - All environmental media which is outside of the legal boundaries of the on-site property.

On-site property (on-site) - All environmental media within the legal boundaries of a property owned or leased by a person who has filed a self-implementation notice or a response action plan for that property or who has become subject to such action through one of the agency=s program areas for that property.

Physical barrier - Any structure or system, natural or manmade, that prevents exposure or prevents migration of chemicals of concern to the points of exposure.

Point of exposure - The location within an environmental medium where a receptor will be assumed to have a reasonable potential to come into contact with chemicals of concern. The point of exposure may be a discrete point, plane, or an area within or beyond some location.

Protective concentration level - The concentration of a chemical of concern which can remain within the source medium and not result in levels which exceed the applicable human health risk-based exposure limit or ecological protective concentration level at the point of exposure for that exposure pathway.

Release - Any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment, with the exception of:

(A) A release that results in an exposure to a person solely within a workplace, concerning a

claim that the person may assert against the person's employer;

(B) An emission from the engine exhaust of a motor vehicle, rolling stock, aircraft, vessel, or pipeline pumping station engine;

(C) A release of source, by-product, or special nuclear material from a nuclear incident, as those terms are defined by the Atomic Energy Act of 1954, as amended (42 U.S.C. '2011 et seq.), if the release is subject to requirements concerning financial protection established by the Nuclear Regulatory Commission under '170 of that Act;

(D) For the purposes of the environmental response law '104, as amended, or other response action, a release of source, by-product, or special nuclear material from a processing site designated under '102(a)(1) or '302(a) of the Uranium Mill Tailings Radiation Control Act of 1978 (42 U.S.C. '7912 and '7942), as amended; and

(E) The normal application of fertilizer.

Sediment - Non-suspended particulate material lying below surface waters such as bays, the ocean, rivers, streams, lakes, ponds, or other similar surface water body (including intermittent streams). Dredged sediments which have been removed from below surface water bodies and placed on land shall be considered soils.

Sensitive environmental areas - Areas that provide unique and often protected habitat for wildlife species. These areas are typically used during critical life stages such as breeding, hatching, rearing of young, and overwintering. Examples include critical habitat for threatened and endangered species, wilderness areas, parks, and wildlife refuges.

Source medium - An environmental medium containing chemicals of concern which must be removed, decontaminated and/or controlled in order to protect human health and the environment. The source medium may be the exposure medium for some exposure pathways.

Stressor - Any physical, chemical, or biological entity that can induce an adverse response; however, as used in this context, only chemical entities apply.

Subsurface soil - For human health exposure pathways, the portion of the soil zone between the base of surface soil and the top of the groundwater-bearing unit(s). For ecological exposure pathways, the portion of the soil zone between 0.5 feet and 5 feet in depth.

Surface cover - A layer of artificially placed utility material (e.g., shell, gravel).

Surface soil - For human health exposure pathways, the soil zone extending from ground surface to 15 feet in depth for residential land use and from ground surface to 5 feet in depth for commercial/industrial land use; or to the top of the uppermost groundwater-bearing unit or bedrock, whichever is less in depth. For ecological exposure pathways, the soil zone extending from ground surface to 0.5 feet in depth.

Surface water - Any water meeting the definition of surface water in the state as defined in '307.3 of this title (relating to Abbreviations and Definitions), as amended.

Figure: 30 TAC '350.77(b) continued

PART I. Affected Property Identification and Background Information

1) Provide a description of the specific area of the response action and the nature of the release. Include estimated acreage of the affected property and the facility property, and a description of the type of facility and/or operation associated with the affected property. Also describe the location of the affected property with respect to the facility property boundaries and public roadways.

The specific area of investigation is the Residue Disposal Area (RDA) at the Copano Property. The Copano Property is bordered to the north and east by Copano Bay and Port Bay, respectively (see Figure 1-1 in the Preliminary Groundwater Assessment Report). State Highway 136 runs in a north-south direction through the center of the property. From the time period of 1972 until 2016, bauxite residue was pumped to the Site via pipelines from an alumina refinery located approximately 10 miles to the south of the property on Corpus Christi Bay.

There are four separate surface impoundments (called Beds 1, 2, 3 and 4) at the property, covering approximately 3,100 acres. The entire Copano Property consists of more than 11,000 acres. The dikes of the impoundments were reportedly constructed using native clays taken from shallow excavations on the property, and keyed into the underlying, approximate 20-ft thick clay layer.

A Preliminary Groundwater Assessment was conducted in 2018. Samples of groundwater were collected from the groundwater monitoring network at the Site, which currently consists of 34 permanent monitoring wells (Figure 1-2 of the report), and were analyzed for chemicals of concern (COCs). Concentrations of the following COCs exceeded the action levels established for the assessment: (1) uranium; (2) Radium 226/228 (combined); and (3) fluoride.

No response actions have been conducted.

Attach available USGS topographic maps and/or aerial or other affected property photographs to this form to depict the affected property and surrounding area. Indicate attachments:

□ Topo map **Ξ Aerial photo** □ Other

2) Identify environmental media known or suspected to contain chemicals of concern (COCs) at the present time. Check all that apply:

Known/Suspected COC Location	Based on sampling data?	
□ Soil # 5 ft below ground surface	□ Yes	Ξ No
□ Soil >5 ft below ground surface	□ Yes	Ξ No
Ξ Groundwater	**Ξ Yes**	□ No
□ Surface Water/Sediments	□ Yes	Ξ No

Explain (previously submitted information may be referenced):

A Preliminary Groundwater Assessment was conducted in 2018. Samples of groundwater were collected from the groundwater monitoring network at the Site, which currently consists of 34 permanent monitoring wells (Figure 1-2) which surround the impoundments. Samples were analyzed for chemicals of concern (COCs). Concentrations of the following COCs exceeded the action levels established for the assessment: (1) uranium; (2) Radium 226/228 (combined); and (3) fluoride.

3) Provide the information below for the nearest surface water body which has become or has the potential to become impacted from migrating COCs via surface water runoff, air deposition, groundwater seepage, etc.

Exclude wastewater treatment facilities and stormwater conveyances/impoundments authorized by permit. Also exclude conveyances, decorative ponds, and those portions of process facilities which are:

a. Not in contact with surface waters in the State or other surface waters which are ultimately in contact with surface waters in the State; and

b. Not consistently or routinely utilized as valuable habitat for natural communities including birds, mammals, reptiles, etc.

The nearest surface water body is approximately 440 feet from the affected property and is named Port Bay. The water body is best described as a:

- ☐ freshwater stream: _____ perennial (has water all year)
  _____ intermittent (dries up completely for at least 1 week a year)
  _____ intermittent with perennial pools
- ☐ freshwater swamp/marsh/wetland
- ☐ saltwater or brackish marsh/swamp/wetland
- ☐ reservoir, lake, or pond; approximate surface acres:
- ☐ drainage ditch
- ☐ tidal stream ☐ bay **☒ estuary**
- ☐ other; specify

Is the water body listed as a State classified segment in Appendix C of the current Texas Surface Water Quality Standards; ''307.1 - 307.10?

☒ Yes Segment # 2472 Use Classification: PCR1, E/O

☐ No

If the water body is not a State classified segment, identify the first downstream classified segment.

Name:

Segment #:

Use Classification:

As necessary, provide further description of surface waters in the vicinity of the affected property:

PART II. Exclusion Criteria and Supportive Information

Subpart A. Surface Water/Sediment Exposure

1) Regarding the affected property where a response action is being pursued under the TRRP, have COCs migrated and resulted in a release or imminent threat of release to either surface waters or to their associated sediments via surface water runoff, air deposition, groundwater seepage, etc.? Exclude wastewater treatment facilities and stormwater conveyances/impoundments authorized by permit. Also exclude conveyances, decorative ponds, and those portions of process facilities which are:

a. Not in contact with surface waters in the State or other surface waters which are ultimately in contact with surface waters in the State; and

b. Not consistently or routinely utilized as valuable habitat for natural communities including birds, mammals, reptiles, etc.

Ξ Yes □ No

Explain:

Concentrations of COCs exceed TRRP Tier 1 PCLs in samples from some monitoring wells at the Site. Although no data have been collected to indicate that a release has occurred to surface waters or their associated sediments via surface runoff, air deposition, or groundwater seepage, due to the proximity of Port Bay to the monitoring wells where COC concentrations exceed the PCLs, the potential for a release cannot be ruled out. Data with which to determine the potential for a release will be collected during the Affected Property Assessment.

If the answer is Yes to Subpart A above, the affected property does not meet the exclusion criteria. However, complete the remainder of Part II to determine if there is a complete and/or significant soil exposure pathway, then complete PART III - Qualitative Summary and Certification . If the answer is No, go to Subpart B.

Subpart B. Affected Property Setting

In answering AYes@ to the following question, it is understood that the affected property is not attractive to wildlife or livestock, including threatened or endangered species (i.e., the affected property does not serve as valuable habitat, foraging area, or refuge for ecological communities). (May require consultation with wildlife management agencies.)

1) Is the affected property wholly contained within contiguous land characterized by: pavement, buildings, landscaped area, functioning cap, roadways, equipment storage area, manufacturing or process area, other surface cover or structure, or otherwise disturbed ground? To

□ Yes **Ξ No**

Explain:

The four surface impoundments where COCs exceed PCL in groundwater are part of an approximately 11,000 acre property. Parts of the 11,000 acre property outside of the impoundments may be attractive to wildlife.

If the answer to Subpart B above is Yes, the affected property meets the exclusion criteria, assuming the answer to Subpart A was No. Skip Subparts C and D and complete PART III - Qualitative Summary and Certification. If the answer to Subpart B above is No, go to Subpart C.

Subpart C. Soil Exposure

1) Are COCs which are in the soil of the affected property solely below the first 5 feet beneath ground surface **or** does the affected property have a physical barrier present to prevent exposure of receptors to COCs in surface soil?

☐ Yes ☐ No

Explain:

No soil samples have been collected at the affected property.

If the answer to Subpart C above is Yes, the affected property meets the exclusion criteria, assuming the answer to Subpart A was No. Skip Subpart D and complete PART III - Qualitative Summary and Certification. If the answer to Subpart C above is No, proceed to Subpart D.

Subpart D. *De Minimus* Land Area

In answering AYes@ to the question below, it is understood that all of the following conditions apply:

☐ The affected property is not known to serve as habitat, foraging area, or refuge to threatened/endangered or otherwise protected species. (Will likely require consultation with wildlife management agencies.)
☐ Similar but unimpacted habitat exists within a half-mile radius.
☐ The affected property is not known to be located within one-quarter mile of sensitive environmental areas (e.g., rookeries, wildlife management areas, preserves). (Will likely require consultation with wildlife management agencies.)
☐ There is no reason to suspect that the COCs associated with the affected property will migrate such that the affected property will become larger than one acre.

1) Using human health protective concentration levels as a basis to determine the extent of the COCs, does the affected property consist of one acre or less and does it meet all of the conditions above?

☐ Yes Ξ No

Explain how conditions are met/not met:

The areal extent of the solid waste management units where concentrations exceed PCLs is greater than 1 acre.

If the answer to Subpart D above is Yes, then no further ecological evaluation is needed at this affected property, assuming the answer to Subpart A was No. Complete PART III - Qualitative Summary and Certification. If the answer to Subpart D above is No, proceed to Tier 2 or 3 or comparable ERA.

Figure: 30 TAC '350.77(b) continued

PART III. Qualitative Summary and Certification (Complete in all cases.)

Attach a brief statement (not to exceed 1 page) summarizing the information you have provided in this form. This summary should include sufficient information to verify that the affected property meets or does not meet the exclusion criteria. The person should make the initial decision regarding the need for further ecological evaluation (i.e., Tier 2 or 3) based upon the results of this checklist. After review, TNRCC will make a final determination on the need for further assessment. **Note that the person has the continuing obligation to re-enter the ERA process if changing circumstances result in the affected property not meeting the Tier 1 exclusion criteria.**

The specific area of investigation is the Residue Disposal Area (RDA) at the Copano Property. There are four separate surface impoundments (called Beds 1, 2, 3 and 4) at the property, covering approximately 3,100 acres (Figure 1-1). The entire Copano Property consists of more than 11,000 acres. A Preliminary Groundwater Assessment was conducted in 2018. Samples of groundwater were collected from the groundwater monitoring network at the Site, which currently consists of 34 permanent monitoring wells (Figure 1-2) that surround the surface impoundments. Samples were analyzed for chemicals of concern (COCs). Concentrations of the following COCs exceeded the action levels established for the assessment: (1) uranium; (2) Radium 226/228 (combined); and (3) fluoride.

No response actions have been conducted at the Site.

The nearest surface water body is Port Bay and is approximately 440 feet from the nearest monitoring well where concentrations of COCs exceed the action levels. Port Bay is an estuary listed as Segment # 2472 with a use classification of PCR1, E/O.

Concentrations of COCs exceed TRRP Tier 1 PCLs in samples from some monitoring wells at the Site. Although no data have been collected to indicate that a release has occurred to surface waters or their associated sediments via surface runoff, air deposition, or groundwater seepage, due to the proximity of Port Bay to the monitoring wells where COC concentrations exceed the PCLs, the potential for a release cannot be ruled out. Data with which to determine the potential for a release will be collected during the Affected Property Assessment.

Section 3 Assessment Strategy

Section 3.1 General Assessment Issues

3.1.1 Environmental Media Assessed

Groundwater, surface water, surface soil, and sediment were the environmental media evaluated for this assessment. Groundwater was chosen due to previous monitoring and investigation activities described in Section 1.2.

General assessment methods for groundwater included collection of groundwater samples using low-flow techniques, analysis of groundwater samples for COCs, and collection of water-level measurements to evaluate groundwater flow directions. General assessment methods for surface soil, surface water, and sediment included collection of samples for each environmental medium and analysis of samples for COCs.

The $^{Air}GW_{Inh\text{-}V}$ and $^{Air}Soil_{Inh\text{-}V}$ pathway is considered incomplete at the Site. Exposure pathways associated with subsurface soil are not considered for this assessment due to the determination of an incomplete surface soil pathway.

3.1.2 Target COCs

Target COCs for the investigation were chosen using an “information-based approach” as described in “Selecting Target Chemicals of Concern” (RG-366, TRRP-10). Target COCs for this assessment were based primarily on previous investigations and monitoring conducted at the Site. The review of previous investigation data and monitoring indicated that metals, uranium, radium 226/228/combined, and fluoride were the target COCs in groundwater. Fluoride was not analyzed in surface water, surface soil, or sediment samples. The concentrations of these compounds were compared to RALs for the purpose of determining COCs for this APAR.

Arsenic and other metals were identified as COCs at the Copano Property. Concentrations of arsenic in groundwater were evaluated due to the potential interaction of the highly alkaline fluids generated during the production of alumina and the naturally occurring arsenic in native soils. Arsenic is more mobile at elevated pH and is concentrated in groundwater when the groundwater interacts with the alkaline fluids.

Uranium and radium are common constituents in the by-products of the aluminum smelting process. During the conversion of alumina to aluminum metal, waste “muds” are generated that contain technologically enhanced naturally occurring radioactive material (TENORM).

Although metals, uranium, radium 226/228/combined, and fluoride were identified as the target COCs, other constituents (cations/anions, etc.) were also analyzed and the results are included in this APAR.

3.1.3 Background

Site-specific background concentrations for metals and radionuclides in soil were evaluated as part of the soil assessment. Ten soil samples were collected from a background area located more than 1.5 miles west of Bed 1 (Figure 4A). The background area is on historically undeveloped land that is currently owned by CE. The surrounding area consists of undeveloped or agricultural land and a few residential properties located approximately 0.5 miles west/southwest of the background area. Given the historic use of the property, samples are not believed to have been impacted by any current or previous industrial activities. Background soil data are shown on Table 4D-1.

Section 3.2 Assessment Strategy

Previous investigations at the Site (preliminary groundwater assessment) delineated COCs in groundwater to TRRP RALs. The assessment strategy employed for completion of this APAR was based on a review of all historical data to determine potentially affected areas and applicable exposure pathways, and to determine the appropriate COCs.

As presented in Section 2.0 of this APAR, the applicable TRRP exposure pathways are the $^{GW}GW_{Class\ 3}$ and $^{Tot}Soil_{Comb}$/$^{GW}Soil_{Class3}$, ^{SW}GW, ^{Sed}GW, ^{SW}SW and ^{Sed}Sed pathways. Atmospheric deposition to surrounding surface water bodies was also investigated.

As discussed in Section 2.0, the $^{Air}Soil_{Inh\text{-}V}$ pathway is incomplete at the Site and was not assessed because the site COCs are not volatile.

3.2.1 General Assessment Approach

Groundwater conditions were investigated using samples collected at 34 monitoring wells, many of which were installed during previous investigations by the prior Site owner.

Samples were collected from soil borings at the Site to assess soil COC concentrations.

Surface water and sediment samples were collected from the surface water bodies located on the north/northwest side of Bed 4 (Freshwater Lake and Swan Lake).

3.2.1.1 Sampling Approach

Groundwater monitoring points are located at the perimeter of the Beds, some in paired configurations to monitor both Zone A and Zone B water-bearing units. Sampling methods were chosen with the intent of delineating any PCLE zones in groundwater at the Site.

Soil samples were collected from 0-1 feet below ground level (bgl) at 44 locations surrounding the Beds. The COCs and geologic setting allowed for the use of traditional investigation methods such as groundwater sampling using low-flow methods and the use of hand augers to collect soil samples.

3.2.1.2 Surface Water and Sediment Assessment

The Copano Site is bounded on the east by Port Bay and on the north by Copano Bay. The northern portion of the Site is occupied by a large "Y" shaped inlet which empties into Copano Bay, called Swan Lake. Swan Lake, a brackish wetland area, ranges in depth from less than one to three feet. This low-lying area can flood and drain with the tidal movement of Copano Bay. A separate water body, called Freshwater Lake, is located northwest of Bed 4. Freshwater Lake is not hydraulically connected to Copano Bay. It typically ranges in depth from less than one to three feet.

The potential for groundwater discharge to adjacent surface water bodies was considered using the stratigraphic and hydrogeologic data. Where data were available, the relationships between the uppermost GWBU (Zone A) and adjacent surface water bodies (Port Bay, Swan Lake, Freshwater Lake) were added to the Site cross sections (Figures 4C-1, 4C-2, and 4C-3). As shown on the cross sections, the uppermost GWBU does not intersect the surface water bodies. Rather, there is typically a minimum of approximately 4 to 5 feet of clay between the bottom of the surface water body and the top of the GWBU, and often as much as 7 to 8 feet of clay. Therefore, the surface water bodies are not hydraulically connected to the uppermost GWBU and the ^{SW}GW and ^{Sed}GW pathways are considered incomplete.

Surface water and sediment samples were collected at the water bodies nearest to Bed 4 (Swan Lake and Freshwater Lake) to investigate the potential ^{SW}GW, ^{Sed}GW, ^{SW}SW and ^{Sed}Sed pathways Three co-located surface water and sediment samples were collected from each water body. The data generated from the samples were evaluated for ecological exposures and potential ecological risk using benchmarks and PCLs for both fresh water and salt water.

3.2.1.3 Utilities

No known underground utility is threatened, affected, or is a potential migration pathway at the Site.

3.2.2 Assessment Methods

Groundwater samples were collected using a low-flow technique and analyzed using standard EPA methods. All groundwater samples were collected using a peristaltic pump with dedicated tubing. All sampling equipment that was not dedicated to the well was decontaminated prior to and after sampling using a Liquinox wash and distilled water rinse.

Groundwater collected for dissolved metals analyses was filtered during sample collection using a disposable 0.45-micron filter prior to chemical preservation. Groundwater samples collected for other analyses were only filtered if turbidity exceeded 10 NTUs following purging. A disposable 10-micron filter was used during sample collection prior to chemical preservation. When filtration was used, it is noted on the field forms in Appendix 3.

Soil samples were collected with a hand auger from 0 to 0.5 feet bgs. All sampling equipment was decontaminated prior to and after sampling using a Liquinox wash and distilled water rinse. A Golder geologist logged the lithology of the soil in the field and assessed the soils for any observable impact that would suggest contamination was present.

Sediment samples were collected at the shoreline of Freshwater and Swan Lake using a stainless-steel shovel. Samples were collected within the top 4-6 inches of sediment (the biologically active zone). The sampling technique minimized the loss of fine-grained sediment and avoidance of debris, such as sticks and rocks, during collection. There was heavy vegetation surrounding the shoreline at Freshwater and Swan Lake, and insects and worms were observed in the sediment. No unusual odors were observed at the sampling locations.

Surface water samples were collected at Freshwater and Swan Lake at one foot below the water surface and were co-located with the sediment samples noted above. There was heavy underwater vegetation and fish activity at Freshwater Lake during the sampling event. There was also fish activity at Swan Lake, and the tide was rising during the sampling event. At all sampling locations, the water was approximately 1.5 feet deep. No unusual odors were observed at the sampling locations. Water quality measurements, including pH, electrical conductivity, and salinity, were collected in the field. Surface water collected for dissolved metals analyses were filtered in the lab before analysis.

All methods were completed in accordance with Golder's Standard Operating Procedures (Appendix 14). Air monitoring was not performed. New monitoring wells were not drilled for this assessment.

3.2.2.1 Data Quality

Analytical methods utilized for the analysis of the COCs outlined in Section 3.3 above were appropriate and commonly utilized USEPA SW-846 methodologies for the type of COCs in each analysis group. Method quantitation limits (MQLs) for the laboratory methods used were in accordance with the TRRP PCL requirements. Appropriate quality assurance samples were collected during sampling events including field duplicates, matrix spike and matrix spike duplicates, and trip blanks and documentation of field instrument calibration. Laboratory data packages include TRRP quality QA/QC and associated documentation to meet TRRP requirements. Analytical data were validated in accordance with the usability requirements provided in TCEQ guidance document TRRP-13, Review and Reporting of COC Concentration Data (TCEQ, 2002). Data usability summaries are included with the laboratory data packages provided in Appendix 10.

Field analysis equipment included: a multiparameter meter (pH, temperature, specific conductance and oxidation-reduction potential), turbidimeter, and water level meter. All meters requiring calibration were calibrated either on a daily basis and/or at the frequency stated by the manufacturer.

Section 4 Soil Assessment

Section 4.1 Derivation of Assessment Levels

Soil assessment levels were based on the following exposure pathways determined to be potentially complete at the Site, as discussed in Section 2.0 of this APAR:

Surface Soil: The $^{Tot}Soil_{Comb}$ and $^{GW}Soil_{Class\ 3}$ pathways are considered potentially complete for surface soils, defined as soils from ground surface to 15 feet bgs or to the top of the uppermost GWBU for residential land use. The $^{GW}Soil_{Class\ 3}$ pathway is the applicable soil-leaching to groundwater pathway since the uppermost water-bearing unit is considered to be a Class 3 groundwater resource.

Although the Site is considered commercial/industrial, delineation of COCs in Site soils was completed using PCLs established for residential land use (Residential Assessment Levels (RALs)) per TRRP rules. As presented on Table 4A for surface soil, the applicable RAL is the lowest Tier 1 residential PCL.

Subsurface Soil: Exposure pathways associated with subsurface soil are not considered for this assessment due to the determination of an incomplete surface soil pathway.

Section 4.2 Nature and Extent of COCs and NAPL in Soil

Soil sampling results are summarized on Table 4D-1 and 4D-2.

Surface Soil: All concentrations of COCs in soil were below the RALs. Based on the analytical results, there is no affected property at the Site related to surface soils.

Subsurface Soil: All soil samples were collected above 15 feet bgl. Exposure pathways associated with subsurface soil were not considered for this assessment due to the determination of an incomplete surface soil pathway.

NAPL: NAPL was not observed in surface soil at the Site.

Notes:
1) ft BGS - feet below ground surface
2) mg/kg - milligrams per kilogram
3) Q - lab qualifiers, as follows:
J - estimated value – the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)
N - laboratory does not offer NELAC certification for this analyte
< - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column
4) pCi/g - picocuries per gram
5) pH reported in Standard pH units
6) TRRP Tier 1 Residential PCL, the lowest of $^{Tot}Soil_{Comb}$ or $^{GW}Soil_{Class\ 3}$ for a 30-acre source area, November 8, 2019

Notes:
1) ft BGS - feet below ground surface
2) mg/kg - milligrams per kilogram
3) Q - lab qualifiers, as follows:
   J - estimated value – the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)
   < - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column
4) TRRP Tier 1 Residential PCL, the lowest of $^{Tot}Soil_{Comb}$ or $^{GW}Soil_{Class\ 3}$ for a 30-acre source area, November 8, 2019

IF THIS MEASUREMENT DOES NOT MATCH WHAT IS SHOWN, THE SHEET SIZE HAS BEEN MODIFIED FROM: ANSI B

Section 5 Groundwater Assessment

Section 5.1 Derivation of Assessment Levels

The $^{GW}GW_{Class\ 3}$ exposure pathway was determined to be potentially complete at the Site, as discussed in Section 2.0 of this APAR.

As presented on Table 5A, the applicable residential assessment levels for groundwater correspond to the lowest residential Tier 1 PCL for the $^{GW}GW_{Class\ 3}$ pathway.

The ^{SW}GW and ^{Sed}GW exposure pathways were considered incomplete because the surrounding surface water bodies are not hydraulically connected to the uppermost GWBU at the Site. Cross sections illustrating this are provided as Figures 4C-1 through 4C-3.

The $^{Air}GW_{Inh\text{-}V}$ pathway is considered incomplete at the Site.

Section 5.2 Nature and Extent of COCs and NAPL in Groundwater

Groundwater sampling results are summarized on Table 5B.

All concentrations of COCs in groundwater were below the PCLs. Based on the analytical results, there is no affected property at the Site related to groundwater.

NAPL has not been observed to be present during investigation activities conducted at the Site.

Table 5A. Groundwater Residential Assessment Levels

Notes:

1) mg/L - milligrams per liter

2) Q - lab qualifiers, as follows:

J - estimated value – the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)

< - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column

N - laboratory does not offer NELAC certification for this analyte

3) Unless otherwise noted, the groundwater assessment level is the TRRP Tier 1 Tier 1 Residential PCL for Class 3 Groundwater ($^{GW}GW_{Class\ 3}$)

Notes:
1) mg/L - milligrams per liter
2) Q - lab qualifiers, as follows:
J - estimated value -- the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)
< - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column
C- Sample result or QC discussed in Case Narative of Lab Report
3) pCi/L - picocuries per liter
4) pH reported in Standard pH units
5) µS/cm - microSiemens per centimeter
6) NTU - Nephelometric Turbidity Units
7) mV - millivolts
8) Unless otherwise noted, the assessment level is the TRRP Tier 1 Industrial PCL for Class 3 Groundwater ($^{GW}GW_{Class\ 3}$)
9) Per TRRP, compounds for which calculation of a Human Health PCL is not required (https://www.tceq.gov/remediation/trrp/trrppcls.html)

Section 6 Surface Water Assessment and Critical PCL Development

Section 6.1 Type of Surface Water and Applicable Water Quality Criteria

The northern portion of the Copano Site is occupied by a large "Y" shaped inlet which empties into Copano Bay, called Swan Lake. Swan Lake is an unclassified brackish wetland area, and ranges in depth from less than one to three feet. This low-lying area can flood and drain with the tidal movement of Copano Bay. Swan Lake is surrounded on the east, west, and south by CE Ranch's property. The only entry to this surface water body is from the north in Copano Bay. The shallow nature of this wetland would prevent entry by boat and the aquatic life that has been observed consists of smaller baitfish. For the purposes of this investigation, the area has been considered a contact recreational area. Swan Lake is surrounded by native vegetation and intermediate aquatic life was observed during sample collection from this surface water body. No unusual odors were observed during sample collection.

A separate water body, called Freshwater Lake, is located northwest of Bed 4. Freshwater Lake is an unclassified brackish lake that is not hydraulically connected to Copano Bay. It typically ranges in depth from less than one to three feet. Freshwater Lake is located on CE Ranch's property, which is surrounded by a barbed wire fence with locked entry gates. Although direct human exposure due to wading or swimming or ingestion of shellfish or fish from this surface water body would not occur, Freshwater Lake was considered a contact recreational area for the development of surface water PCLs. The lake is surrounded by native vegetation, and limited aquatic life was observed during sample collection. No unusual odors were observed during sample collection.

The Copano Site is bounded on the east by Port Bay and on the north by Copano Bay. Appendix D of the Texas Surface Water Quality Standards designates Port Bay and Copano Bay (Segment No. 2472) as contact recreational areas and indicates these bays have exceptional aquatic life and produce edible species of clams, oysters, and/or mussels.

The potential for groundwater discharge to adjacent surface water bodies was considered using the stratigraphic and hydrogeologic data. Where data were available, the relationships between the uppermost GWBU (Zone A) and adjacent surface water bodies (Port Bay, Swan Lake, Freshwater Lake) were added to the Site cross sections (Figures 4C-1, 4C-2, and 4C-3). As discussed in earlier Sections, the uppermost GWBU does not intersect the surface water bodies. There is typically a minimum of approximately 4 to 5 feet of clay between the bottom of the surface water body and the top of the GWBU, and often as much as 7 to 8 feet of clay. It was concluded that Port Bay, Swan Lake, and Freshwater Lake are not hydraulically connected to the GWBU at the Site and the ^{SW}GW and ^{Sed}GW pathways are incomplete.

Surface water samples were collected at the water bodies nearest to Bed 4 (Swan Lake and Freshwater Lake) to investigate the possible atmospheric deposition due to dusting from the Beds. Three surface water samples were collected from each water body at one foot below the water surface.

As presented on Table 6A, the applicable residential assessment levels for surface water correspond to the combined Tier 1 human health exposure pathways for contact recreation water ($^{Tot}RW_{Comb}$). The data generated from the samples were also evaluated for ecological exposures and potential ecological risk using chronic benchmarks for both fresh water and salt water. Further discussion of the ecological risk assessment is detailed in Section 9.

Section 6.2 Surface Water Risk-Based Exposure Levels (RBELs) for Human Health and Aquatic Life Protection

Surface water samples collected at Freshwater Lake and Swan Lake utilized the combined Tier 1 human health exposure pathway PCLs for contact recreation water ($^{Tot}RW_{Comb}$).

Section 6.3 Nature and Extent of COCs in Surface Water

The surface water sampling results are summarized on Tables 6B-1 and 6B-2.

Concentrations of COCs in surface water samples collected at Freshwater Lake and Swan Lake did not exceed the combined Tier 1 human health exposure pathway PCLs for contact recreation water ($^{Tot}RW_{Comb}$).

NAPL has not been observed to be present during investigation activities conducted at the Site.

Section 6.4 Critical PCL for Surface Water

Concentrations of COCs in surface water samples collected at Freshwater Lake and Swan Lake did not exceed the combined Tier 1 human health exposure pathways for contact recreation water ($^{Tot}RW_{Comb}$).

Section 7 Sediment Assessment and Critical PCL Development

Section 7.1 Type of Sediment and Applicable Criteria

As stated in Section 6, the ^{SW}GW and ^{Sed}GW pathways are incomplete.

Sediment samples were collected at the water bodies nearest to Bed 4 (Swan Lake and Freshwater Lake) to further investigate the potential atmospheric deposition due to dusting at the Beds. Three sediment water samples were collected from the banks of each water body at four to six inches below the ground surface. As presented on Table 7A, the applicable residential assessment levels for sediment correspond to the combined Tier 1 human health exposure pathways for sediment ($^{Tot}Sed_{Comb}$). The data generated from the samples were also evaluated for ecological exposures and potential ecological risk using chronic benchmarks for both fresh water and salt water. Further discussion of the ecological risk assessment is detailed in Section 9.

Sediment that was collected from the banks of Swan Lake consisted of very fine to fine-grained sands with little clay. The sands were light grey to light brown, rounded, and well sorted. Worms were observed in the aerobic zone, which was observed to be approximately four inches below ground surface. No unusual odors were observed during sample collection. As discussed in Section 6.1, Swan Lake is surrounded on the east, west, and south by CE Ranch's property. The only entry to this surface water body would be from the north in Copano Bay. The shallow nature of this wetland prevents entry by boat and the aquatic life that has been observed consists of smaller baitfish. For the purposes of this investigation, the area has been considered a contact recreational area although the potential for direct human exposure due to wading or swimming is considered low. Evidence of past or current shellfish reefs were not present at Swan Lake; the potential for indirect human exposure from ingestion of shellfish and fish are low.

Sediment that was collected from the banks of Freshwater Lake consisted of very fine-grained sands that were brown to light grey, rounded, and well sorted. Worms were observed in the aerobic zone (approximately four inches below ground surface) and there was heavy vegetation on the bottom of the lake. No unusual odors were observed during sample collection. As discussed in Section 6.1, Freshwater Lake is located on CE Ranch's property. Although direct human exposure due to wading or swimming or ingestion of shellfish or fish from this surface water body would not occur, Freshwater Lake was considered a contact recreational area for the development of sediment PCLs.

Section 7.2 Sediment Risk-based Exposure Levels (RBELs) for Human Health

Sediment samples collected at Freshwater Lake and Swan Lake utilized the combined Tier 1 human health exposure pathway PCLs for sediment ($^{Tot}Sed_{Comb}$).

Section 7.3 Nature and Extent of COCs in Sediment

Sediment sampling results are summarized on Table 7B.

Concentrations of COCs in sediment samples collected at Freshwater Lake and Swan Lake did not the combined Tier 1 human health exposure pathway PCLs for sediment ($^{Tot}Sed_{Comb}$). Also, concentrations of COCs in sediment samples were below all ecological benchmarks.

NAPL has not been observed to be present during investigation activities conducted at the Site.

Ecological Risk Assessment Review of Soil, Sediment and Surface Water Data CE Ranch LLC, Copano Property

Golder Associates Inc. (Golder) is pleased to submit this ecological evaluation of the surface soil, surface water and sediment data recently generated form the Copano Property (the Site). This assessment has been completed using the Texas ecological risk process as described in the documents published by the TCEQ:

- TCEQ's Texas Risk Reduction Program (TRRP) [TAC 350];
- TCEQ's *Conducting Ecological Risk Assessments at Remediation Sites in Texas* (ERAG) (Publication RG-263) (August 2018);
- TCEQ's Supporting Documentation for the TCEQ's Ecological Benchmark Tables and the Tables themselves (August 2019);
- TCEQ's *Determining Representative Concentrations of Chemicals of Concern*. Publication RG-366/TRRP-15eco (2013); and
- TCEQ's Ecological Protective Concentration Level (PCL) Database which provides soil PCLs for wildlife (found online: pcl.wtamu.edu/pcl/login.jsp).

1.0 ECOLOGICAL RISK ASSESSMENT UNDER THE TEXAS RISK REDUCTION PROGRAM (TRRP)

1.1 Tiered Process

The ecological risk assessment process in Texas is split into three tiers:

Tier 1 is the Exclusion Criteria Checklist [Figure: 30 TAC 350.77(b)] which was designed to be an "off-ramp" for the ecological assessment process for those sites with no ecological attributes. For example, if an area is totally paved and chemicals of concern (COCs) could not be discharged to a surface water body, then the site would meet the requirements of the checklist and no ecological assessment would be necessary. The Copano Site did not meet the requirements of the checklist and, therefore, is required to move to Step 2 below.

Tier 2 is the Screening Level Ecological Risk Assessment (SLERA) and is the most common type of ecological assessment. An abbreviated SLERA for the Site based on the available soil data is presented Section 1.2 below. The SLERA can be the terminal ecological risk for a site, or it can be used to develop/identify PCLs or it can be used as the basis for further evaluation.

Tier 3 is the Site-Specific Ecological Risk Assessment (SSERA) and uses site-specific inputs such as tissue data collected from the site. Generally, a SLERA is completed prior to the development of an SSERA. The SLERA is used to define those uncertainties that can be addressed with site-specific data. For example, the SLERA would

Golder Associates Inc.
2201 Double Creek Dr, Suite 4004, Round Rock, Texas, USA 78664 T: +1 512 671-3434 F: +1 512 671-3446

Golder and the G logo are trademarks of Golder Associates Corporation.

model the concentration of COCs in mammal tissue, but the SSERA could sample the mammals. The SSERA is not applicable to this Site.

1.2 Tier 2 SLERA

The Tier 2 SLERA (aka SLERA) uses site media data (e.g., metals concentrations in soil) to estimate exposure to ecological receptors (e.g., small mammals or birds) using data and exposure assumptions taken from the open literature. The ecological risk process in Texas is comprised of 10 required elements which are described in TRRP [30 TAC 350] and in RG-263 *Conducting Ecological Risk Assessments at Remediation Sites in Texas* (ERAG) (TCEQ, 2018a). The required elements as they pertain to the Site are described below.

1.2.1 Benchmark Screening (Required Element 1)

The first step in the process is to screen the maximum detected concentrations against the screening level benchmarks and for soil, background concentrations for metals. The higher of the Texas Median background values and the site-specific background values is applied in the SLERA. Table 1 shows the site-specific background data for the site COCs (aluminum, antimony, arsenic, chromium, lead, mercury, nickel, thallium, vanadium and uranium, radium-226 and radium-228[1]). Table 1 also shows the 95% Upper Prediction Limits (UPLs) calculated for the COCs using the ProUCL program. All of the UPLs are based on a normal data distribution.

1.2.1.1 Soil Benchmark Screening

Table 2 shows the comparison of the site surface soil sample data to background concentrations and the soil ecological benchmarks. Figure 1 shows the locations of the samples in relation to the beds. The benchmarks are concentrations protective of soil invertebrate and plant communities. If the maximum detected concentration is less than the benchmark for a nonbioaccumulative COC, then no further investigation of that COC is required. However, chromium, lead, mercury, and nickel are considered bioaccumulative in soil by the TCEQ (see Table 5.1 in TCEQ, 2018a), and if any of these COCs are detected in soil at a concentration greater than background, then they must be evaluated for exposure to wildlife. The results of the benchmark screening for each COC is listed below:

- **Aluminum** –Aluminum is only considered an ecological COC if the soils are at a pH less than 5.5 (EPA, 2003). The pH of the site soils ranges from 6.16 to 8.51 with a simple average of 7.38. Because of the neutral pH of the site soils, aluminum is not considered an ecological COC and no further ecological evaluation is necessary.
- **Antimony** – Antimony was not detected in the background soil samples or the site soil samples above the sample detection limits. Antimony is removed as an ecological COC.
- **Arsenic** – Arsenic was not detected above the ecological benchmark or the Texas median background value in the site soil samples. Arsenic is removed as an ecological COC.
- **Chromium** – Chromium exceeds the Texas median background of 30 mg/kg in one sample (SB-40 at 64.4 mg/kg). Chromium is considered a bioaccumulative metal in soil and is retained as an ecological COC and is discussed further in this SLERA.
- **Lead** – Lead exceeds the Texas median background concentration of 15 mg/kg in one sample (SB-30 at 18.5 mg/kg), but the concentration is below the screening benchmark of 120 mg/kg. The soil invertebrate

[1] Calcium, sodium, total alkalinity, sulfate and soluble ammonia data are also available, but they parameters are generally not evaluated in ecological risk assessments.

community and plant community are not at risk from lead, but because lead is considered a bioaccumulative metal in soil, further analysis is required in this SLERA.

- **Mercury** – Mercury was not detected in the site soil samples above the sample detection limits. Mercury is removed as an ecological COC.
- **Nickel** – Nickel concentrations exceed the site-specific background concentration of 12 mg/kg for two samples (SB-01 at 19.0 mg/kg and SB-40 at 29.4 mg/kg); however, these concentrations are less than the ecological soil benchmark of 38 mg/kg. Nickel is considered a bioaccumulative metal in soil and is retained as an ecological COC and discussed further in this SLERA.
- **Thallium** – Thallium was not detected in the background soil samples or the site soil samples above the sample detection limits. Thallium is removed as an ecological COC.
- **Vanadium** – Vanadium exceeds the Texas median background concentration of 50 mg/kg in one sample (SB-40 at 51.7 mg/kg). All concentrations of vanadium exceed the ecological soil benchmark. Therefore, vanadium is retained for further analysis in the SLERA.
- **Uranium –** Uranium was not detected above the ecological benchmark or background concentration. Uranium is removed as an ecological COC.
- **Radium-226, Radium-228 and Combined 226 + 228** – All of the detected concentrations are below the TCEQ's radionuclide biota concentration guides (BCGs) protective of terrestrial receptors. There is not a BCG for combined radium-226 and -228 so the lowest BCG between radium-226 and radium-228 is presented. Radium is removed as an ecological COC.

Chromium, lead, nickel, and vanadium in soil are discussed further in the following sections.

1.2.1.2 Surface Water Benchmark Screening

Tables 3A and 3B shows the comparison of the surface water data collected from the freshwater area and saltwater area of the nearby wetlands to the benchmarks. Figure 2 shows the sample locations. Surface water samples were filtered, and both the total and dissolved fractions were analyzed for this evaluation. Benchmarks are noted as based on total or dissolved fractions and therefore total surface water sample data were compared to total benchmarks and dissolved surface water sample data were compared to dissolved benchmarks. As shown on Tables 3A (total analyses) and 3B (dissolved analyses), there were no exceedances of any of the available benchmarks, except for one detection of radium-228 from saltwater location SW-06 at 3.79 pCi/L with a benchmark of 3 pCi/L. The other five detections are below the benchmark and there are no exceedances of the radium-226 benchmark.

1.2.1.3 Sediment Benchmark Screening

Table 4 shows the comparison of the sediment samples collected in the freshwater area and saltwater area of the nearby wetlands to the benchmarks. Figure 2 shows the sample locations. There were no exceedances of detected metals or non-detect values when compared to the benchmarks.

1.2.2 Exposure Pathway Analysis, Conceptual Site Model, Fate and Transport (Required Elements 2 - 4)

The exposure pathway analysis and conceptual site model (CSM) present how the ecological receptors are exposed to the metals potentially originating from the residue disposal area (RDA). The primary COC transport pathway is historic windblown dust from the RDA. Wetlands and surface water bodies are present to the north and east of the RDA and there is the possibility that windblown dust from the RDA has been deposited in the wetlands.

1.2.3 Receptor effects levels and exposure assessment (Required Element 5)

Ecological receptors to be assessed in this SLERA are based on the Minor Habitat-Terrestrial for soil exposures and include the American robin, American woodcock, bobwhite quail, deer mouse, eastern cottontail, least shrew, mourning dove, nine-banded armadillo, northern cardinal, raccoon, red fox, red-tailed hawk, southern short tailed shrew, Texas rat snake, Virginia opossum and white footed mouse. Additionally, domestic cattle are present in the study area. Domestic cattle are also included in the database. For the aquatic portion of the assessment, the sediment PCLs developed for the spotted sandpiper are used for comparison for bioaccumulative metals in sediment (i.e., nickel).

1.2.4 Hazard Quotient Analysis (Required Elements 6 and 7)

A hazard quotient (HQ) is simply the ratio of the exposure point concentration to the PCL and provides a way to identify when concentrations exceed the “safe” value. An HQ greater than 1 indicates a potential risk; an HQ below 1 indicates acceptable risk. The PCL database was used to determine the lowest soil PCL for those receptors listed in the Minor Habitat plus domestic cattle. All of the calculated HQs are below 1 as described below:

Chromium – The lowest soil average PCL is 289.3 mg/kg for American robin. The domestic cattle conservative PCL is over 6,000 mg/kg in soil. The ratio of the maximum concentration of 64.4 mg/kg to the PCLs is below 1.

Lead – The lowest conservative soil PCL is based on the American robin at 22.9 mg/kg. The domestic cattle conservative PCL is over 10,000 mg/kg in soil. The ratio of the maximum concentration of 18.5 mg/kg to the soil PCLs is well below 1.

Nickel - The lowest conservative soil PCL is based on the American robin at 72.8 mg/kg. The domestic cattle conservative PCL is over 3,000 mg/kg. The ratio of the maximum concentration of 29.4 mg/kg to the soil PCLs is well below 1. Nickel is considered bioaccumulative in sediment and there were detections of nickel in the sediment (Table 4). The lowest conservative sediment PCL is 150.8 mg/kg for the spotted sandpiper. The maximum detected concentration of nickel in sediment is 14.8 mg/kg. The ratio of the maximum concentration of 14.8 mg/kg to the PCL is well below 1.

Vanadium - The lowest conservative PCL is based on the American woodcock at 52.2 mg/kg. The domestic cattle conservative PCL is 1,446 mg/kg. The ratio of the maximum concentration of 51.7 mg/kg to the PCLs is below 1.

Based on the HQ Analysis, there are no final COCs and therefore ecological-based PCLs are not necessary.

1.2.5 Uncertainty Analysis (Required Element 8)

This section of the SLERA describes significant uncertainties included in the assessment and hypothesizes on the impact of these uncertainties on the PCLs and SLERA conclusions.

One uncertainty identified in this SLERA evaluation is the possibility of a small soil hot spot around SB-40. This location has the highest concentrations for chromium, nickel, and vanadium (see Table 2). The closest sample which was analyzed for all of the metals is SB-41 located to the west of SB-40. It is possible that a hot spot exists in the corner of the property by Bed 1, but the concentrations are not significantly greater than background and based on comparisons to ecological soil benchmarks, are not causing risk to birds, mammals or reptiles.

There is one concentration of chromium and one concentration of vanadium in soil that are greater than both their background value and the soil benchmark, indicating that the soil invertebrate and plant community may be at risk. However, the determination of risk is generally made on representative concentrations and not single concentrations. The 95% Upper Confidence Limit (UCL) is considered the standard representative statistic for exposure point concentrations. The 95% UCL for chromium (using all the detected site concentrations) is 39.44 mg/kg (Appendix A) which is above the background value of 30 mg/kg. The 95% UCL for vanadium is 31.69 mg/kg which is well below the background value of 50 mg/kg. Based on the distribution of the concentrations, most of the chromium and vanadium concentrations are below background values.

The primary uncertainty associated with the surface water and sediment evaluation is the lack of benchmarks for vanadium and uranium. Vanadium was detected in all six sediment samples with a maximum detection of 43.6 mg/kg. There was only 1 detection above the detection limit for uranium in sediment (2.05 mg/kg). As a point of reference, the median Texas soil background value if 50 mg/kg for both uranium and vanadium. There are no salt water benchmarks for vanadium or uranium, however, all detections were well below the freshwater benchmarks. Based on the median Texas soil background value and freshwater values, vanadium and uranium in sediment and surface water are not present at concentrations that could cause unacceptable risk to ecological receptors.

Table 5 shows the field parameters for the surface water samples. The salinity between the freshwater samples and saltwater samples is significant (approximately double), however the freshwater samples have salinity greater than the 2 parts per thousand (ppt) as defined by the ERAG benchmark guidance (TCEQ, 2018b) for salt water. The freshwater surface water body is likely a transitional area and receives freshwater inflows. Salinity in the freshwater area likely fluctuates with freshwater inflows and tidal actions. The freshwater surface water and sediment samples were compared to freshwater benchmarks in Tables 3A, 3B, and 4, respectively. However, if the sample data from the freshwater samples are compared to the salt water benchmarks, there are no exceedances.

1.2.6 Ecological PCL Development (Required Element 9)

This SLERA did not result in any final COCs for wildlife or benthic invertebrates and therefore ecological PCLs are not applicable. Final ecological PCLs are not necessary for immobile terrestrial receptors (e.g., plants and soil invertebrates).

1.2.7 Ecological Risk Management (Required Element 10) and Project Recommendations

Required Element 10 is risk management, i.e., what actions are recommended to reduce or remove the risk to ecological receptors. For this SLERA it was determined that there is no ecological risk to the wildlife receptors listed in the TCEQ's Minor Habitat (terrestrial and aquatic) plus domestic cattle. Further ecological assessment is not warranted.

Notes:

1) mg/kg - milligrams per killogram, UPL - upper prediction limit

2) Q - lab qualifiers, as follows:

J - estimated value – the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)

< - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column

3) pCi/g - picocuries per gram

4) 95% UPLs (Upper Prediction Limits) are based on normal data distribution. The UPL for mercury is the maximum detection and not a statistical calculation.

5) All samples collected from 0-6 inches below ground surface.

Notes:

1) mg/kg - milligrams per killogram, UPL - upper prediction limit

2) Q - lab qualifiers, as follows:

   J - estimated value – the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)

   N - laboratory does not offer NELAC certification for this analyte

   < - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column

3) pCi/g - picocuries per gram

4) Ecological Soil Benchmarks dated August 2019.

5) Texas-Specific Median Background concentrations for metals from TRRP rule §350.51(m).

6) Site-Specific Background 95% UPLs (Upper Prediction Limits) from Table 1.

7) All samples collected from 0-6 inches below ground surface.

8) * indicates that the analyte is bioaccumulative in soil

9) Highlighted cells indicate an exceedance of the highest of the Texas-Specific Median Background concentrations or the Site-Specific Background concentrations if the Background is higher than the Ecological Soil Benchmark.

10) Aluminum is not considered an Ecological COC due to the neutral pH of the site soils. Therefore, no ecological evaluation is necessary.

Notes:

1) mg/kg - milligrams per kilogram

2) Q - lab qualifiers, as follows:

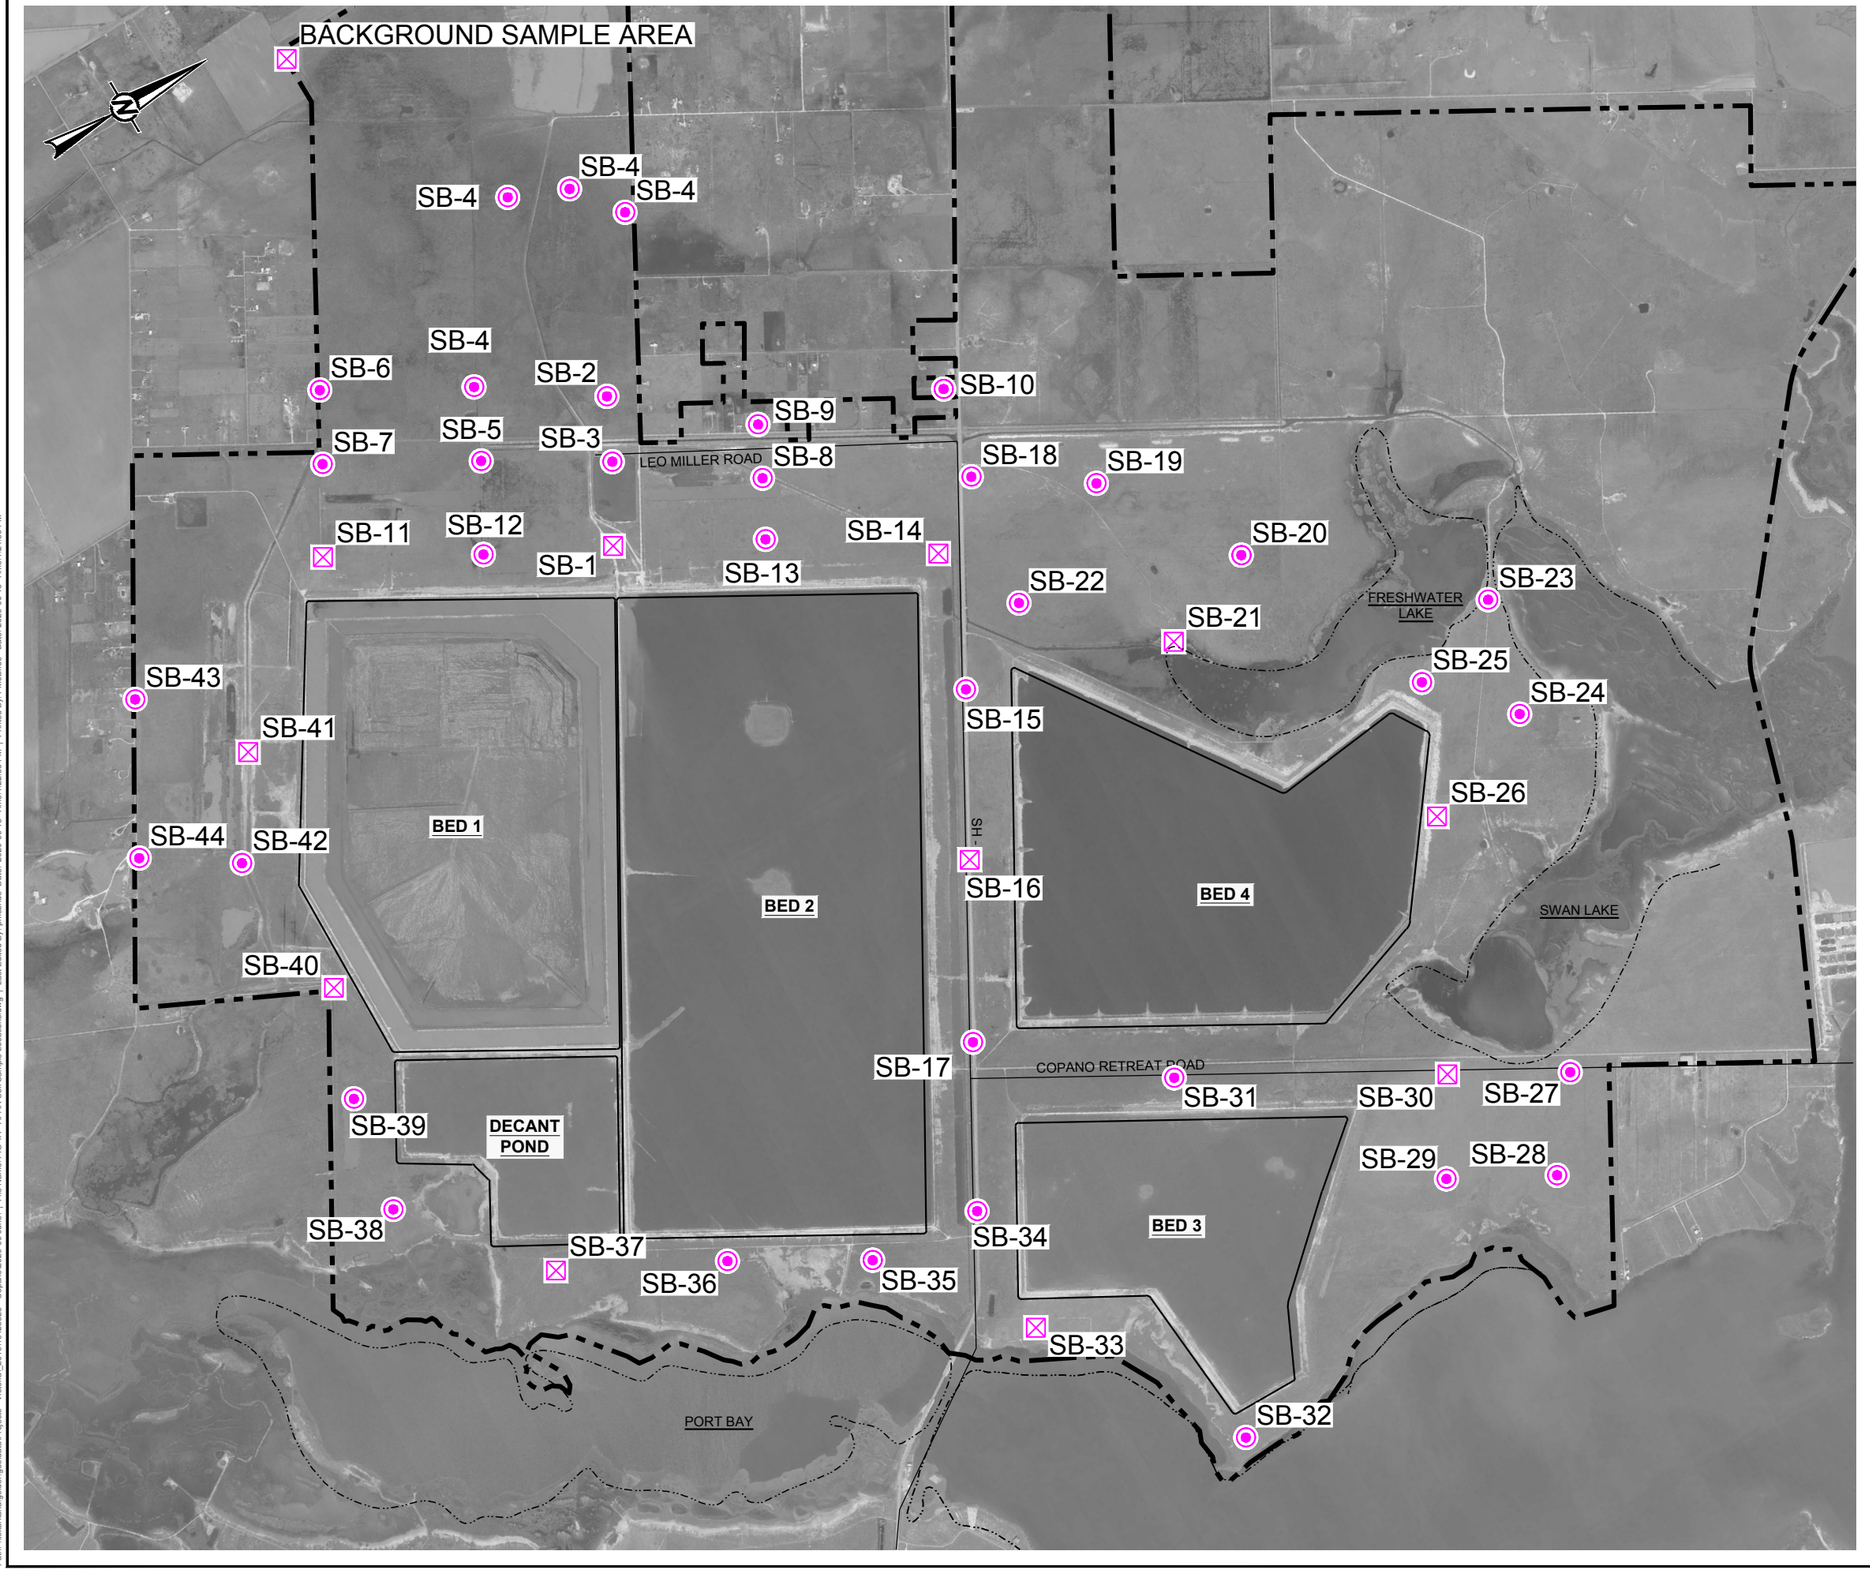
J - estimated value – the result falls between the Sample Detection Limit (SDL) and the Reporting Limit (RL)

< - indicates the analyte was not detected at the Sample Detection Limit (SDL); SDL listed in the concentration column

N - laboratory does not offer NELAC certification for this analyte

3) Bioaccumulative in sediment

4) pCi/g - picocuries per gram



5) Freshwater and Saltwater Sediment Chronic Benchmarks for sediment samples (TCEQ August 2019 Benchmark Tables Accompanying the Ecological Risk Assessment Guidance).

TABLE 5
FIELD READINGS
CE RANCH LLC
COPANO PROPERTY

SAMPLE ID	DATE	pH[1]	SPECIFIC CONDUCTIVITY (mS/cm)[2]	SALINITY (ppt)[3]	TURBIDITY (NTU)[4]	DISSOLVED OXYGEN (mg/L)[5]	TOTAL DISSOLVED SOLIDS (mg/L)
SW-1 (Freshwater)	5/15/2020	9.05	22300	10.3	22.9	11.20	10.9
SW-2 (Freshwater)	5/15/2020	8.82	24200	10.9	12.1	10.10	11.8
SW-3 (Freshwater)	5/15/2020	8.77	26900	11.3	9.60	7.81	11.7
SW-4 (Salt Water)	5/15/2020	8.58	47400	21.0	19.7	7.93	24.1
SW-5 (Salt Water)	5/15/2020	8.54	42600	19.8	18.2	12.40	20.6
SW-6 (Salt Water)	5/15/2020	8.58	51400	20.2	18.8	13.30	20.2

Notes:
1) pH reported in standard units
2) mS/cm - milliSiemens per centimeter
3) ppt - parts per thousand
4) NTU - Nephelometric Turbidity Unit
5) mg/L - milligrams per liter

Section 10 COC Screening

Section 10.1 Frequency of Detection

No COCs at the Site were screened during the assessment.

Section 10.2 Lab Contaminant or Blank Contaminant

No COCs at the Site were screened during the assessment.

Section 10.3 COC Not Sourced On-Site

No COCs at the Site were screened during the assessment.

Section 10.4 Appropriate Sample Quantitation Limits

No COCs at the Site were screened during the assessment.

Section 10.5 Screened COCs Expected to be Present Dropped from Future Sampling

No COCs at the Site were screened during the assessment.

Table 10A. COC Screening Summary Table

1	2	3	4	5	6	7	8	SQL Justifications	
								9	10
COC	All detected concentrations and SQLs < residential assessment level in all sampled media §350.71(k)(1)	COC not detected in any sample in the medium §350.71(k)(3)	Frequency of detects <5% of the ≥20 samples in this medium[1] §350.71(k)(2)(A)(i) through (iii)	Common lab contaminant[2] §350.71(k)(2)(B)	Blank contaminant[2] §350.71(k)(2)(C)	Max conc < background §350.71(k)(2)(D)	COC not sourced on-site[3] §350.71(k)(2)(E)	All SQLs < RAL §350.71(k)(3)(A)	SQL > RAL but justified[4] §350.71(k)(3)(B)
N/A									

[1] Provide in the text justification that a critical PCL is not warranted based on the criteria specified in §350.71(k)(2)(A)(iii).
[2] Provide in the text justification that the COC is not anticipated to be present at the site (see §350.71(k)(2)(B) or (C)).
[3] Provide in the text justification that the COC is not from an on-site source (see §350.71(k)(2)(E)).
[4] Provide in the text justification that all requirements of §350.71(k)(3)(B) are met.

Section 11 Soil Critical PCL Development

Section 11.1 Tier 2 or 3 PCL Development and Non-Default Parameters

No Tier 2 or 3 PCLs were developed for this assessment.

Section 11.2 Soil PCL Adjustments

No PCL adjustments were made to PCLs for the target COCs (metals, uranium, radium 226/228/combined).

Section 11.3 Soil Critical PCLs

Critical PCL development was not necessary due to the concentrations of all COCs in soil samples being below the RALs.

Table 11A. Surface Soil Critical PCLs
Date of the Tier 1 PCL tables used in the determination of PCLs: _____

On-Site Surface Soil Critical PCLs
Land use for purpose of critical PCL development: ___ Residential ___ Commercial/industrial

COC	$^{Tot}Soil_{Comb}$ PCL			$^{GW}Soil^{1}$ PCL			Ecological PCL		MQL (mg/kg)	Back-ground (mg/kg)	$^{SW}Soil^{2}$ (mg/kg)	$^{Sed}Soil^{2}$ (mg/kg)	Conc (mg/kg)		Remedy or NFA
	(mg/kg)	Tier	Source area size (acres)	(mg/kg)	Tier	Source area size (acres)	0-0.5 ft. (mg/kg)	0.5-5 ft. (mg/kg)					Max	Rep[3]	
N/A															

Off-Site Surface Soil Critical PCLs
Land use for purpose of critical PCL development:[4] ___ Residential ___ Commercial/industrial

COC	$^{Tot}Soil_{Comb}$ PCL			$^{GW}Soil^{1}$ PCL			Ecological PCL		MQL (mg/kg)	Back-ground (mg/kg)	$^{SW}Soil^{2}$ (mg/kg)	$^{Sed}Soil^{2}$ (mg/kg)	Conc (mg/kg)		Remedy or NFA
	(mg/kg)	Tier	Source area size (acres)	(mg/kg)	Tier	Source area size (acres)	0-0.5 ft. (mg/kg)	0.5-5 ft. (mg/kg)					Max	Rep[3]	
N/A															

[1] $^{GW}Soil$ includes $^{GW}Soil_{Ing}$, $^{GW}Soil_{Class3}$, $^{Air}GW\text{-}Soil_{Inh\text{-}V}$, and $^{GW}Soil$ for secondary MCLs, as applicable.
[2] Refer to *Determining PCLs for Surface Water and Sediment* (RG-366/TRRP-24) to determine if a PCL is required to be developed for this pathway.
[3] Provide justifications and calculations for use of representative concentrations in Appendix 8.
[4] Repeat the table if needed for different off-site land uses.

Table 11B. Subsurface Soil Critical PCLs
Date of the Tier 1 PCL tables used in the determination of PCLs: _____

On-Site Subsurface Soil Critical PCLs
Land use for purpose of critical PCL development: _____ Residential ____ Commercial/industrial

COC	$^{Air}Soil_{Inh-V}$ PCL			$^{GW}Soil^{1}$ PCL			MQL (mg/kg)	Background (mg/kg)	Max conc (mg/kg)	Remedy or NFA
	(mg/kg)	Tier	Source area size (acres)	(mg/kg)	Tier	Source area size (acres)				
N/A										

Off-Site Subsurface Soil Critical PCLs
Land use for purpose of PCL development[2]: ____ Residential ____ Commercial/industrial

COC	$^{Air}Soil_{Inh-V}$ PCL			$^{GW}Soil^{1}$ PCL			MQL (mg/kg)	Background (mg/kg)	Max conc (mg/kg)	Remedy or NFA
	(mg/kg)	Tier	Source area size (acres)	(mg/kg)	Tier	Source area size (acres)				
N/A										

[1] $^{GW}Soil$ includes $^{GW}Soil_{Ing}$, $^{GW}Soil_{Class3}$, $^{Air}GW\text{-}Soil_{Inh-V}$, and $^{GW}Soil$ for secondary MCLs, as applicable.
[2] Repeat the table if needed for differing off-site land uses.

Figure 11B Subsurface Soil PCLE Zone Maps (Not applicable)

Figure 11C Cross Sections of the PCLE Zone (Not applicable)

Section 12 Groundwater Critical PCL Development

Section 12.1 Tier 2 or 3 PCL Development and Non-Default Parameters

No Tier 2 or 3 PCLs were developed for this assessment.

Section 12.2 Groundwater PCL Adjustments

No PCL adjustments were made to PCLs for the target COCs (metals, uranium, radium 226/228/combined, fluoride).

Section 12.3 Groundwater Critical PCLs

Tier 1 residential PCLs were utilized as the Critical PCL for COCs retained for Critical PCL development. The applicable Critical PCLs for metals, uranium, radium 226/228/combined, and fluoride are equivalent to the Tier 1 residential PCLs (RALs).

Table 12A. Groundwater Critical PCLs – Full Plume POE

Groundwater-bearing unit: _____
Repeat table for each applicable groundwater-bearing unit.
Date of the Tier 1 PCL tables used in the determination of PCLs: _____

On-Site Groundwater Critical PCLs
Land use for purpose of PCL development: X Residential ____ Commercial/industrial

COC	$^{GW}GW_{Class\ 3}$ PCL		$^{Air}GW_{Inh\text{-}V}$ PCL		Ecological PCL for groundwater[1]		MQL (mg/L)	Background (mg/L)	Maximum Concentration (mg/L)	Remedy or NFA
	(mg/L)	Tier	(mg/L)	Tier	(mg/L)	Tier				
N/A										

Off-Site Groundwater Critical PCLs
Land use for purpose of PCL development[2]: ____ Residential ____ Commercial/industrial

COC	$^{GW}GW_{Ing}$ PCL		$^{Air}GW_{Inh\text{-}V}$ PCL		Ecological PCL for groundwater[1]		MQL (mg/L)	Background (mg/L)	Conc (mg/L)		Remedy or NFA
	(mg/L)	Tier	(mg/L)	Tier	(mg/L)	Tier			Max	Rep[2]	
N/A											

[1] This pathway is applicable for direct contact with groundwater, such as cave invertebrates or salamanders.
[2] Repeat the table if needed for different off-site land uses.

Table 12B. Groundwater-to-Surface Water PCLs
Groundwater-bearing unit: _____

COC	SW critical PCL (mg/L)[1]	Groundwater-to-surface water dilution factor	^{SW}GW critical PCL[2] (mg/L)
N/A			

Table 12C. Groundwater-to-Sediment PCLs
Groundwater-bearing unit: _____

COC	Sed critical PCL (mg/kg)[3]	Surface water mixing factor[4]	K_{sed-w} (mg/L-gw/ mg/kg-sed)	^{Sed}GW critical PCL[5] (mg/L)
N/A				

[1] From Table 6A.
[2] Equals results of Table 12B second column divided by the value in the third column.
[3] From Table 7A.
[4] Default is 1.
[5] Equals product of Table 12C columns 2, 3, and 4.

Table 12D. Groundwater Critical PCL Evaluation - Surface Water/Sediment Discharge POE
Groundwater-bearing unit: _____

COC	GW Critical PCL[1] (mg/L)	[SW]GW critical PCL[2] (mg/L)	[Sed]GW critical PCL[3] (mg/L)	Critical PCL for GW-SW POE[4] (mg/L)	Conc at GW-SW POE (mg/L)		At GW-SW POE, remedy or NFA?

GROUNDWATER SAMPLING RECORD

PAGE 1 of 1

Project Number: 18111304-2003 **Project Name:** Copano 6th 2019	**Date:** 6-22-19
Sample Number: MW4-4	**Starting Water Level (ft. BMP):** 7.35
Sampling Location (well ID, etc.): MW4-4	**Casing Stickup (ft.):** -
Sampled by: GML	**Starting Water Level (ft. BGL):** -
Measuring Point (MP) of Well: TOC/PVC	**Total Depth (ft. BMP):** 17.19
Screened Interval (ft. BGL): -	**Casing Diameter (in ID):** 4
Filter Pack Interval (ft. BGL): -	**Casing Volume (gal.):** 6.43

QUALITY ASSURANCE

METHODS (describe):

Cleaning Equipment: Dedicated Equipment

Purging: Peri Pump with dedicated tubing **Sampling:** Same

Disposal of Discharged Water: Beck 4

INSTRUMENTS (Indicate make, model, I.D.)

Water Level: Keck Geotech

pH Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Conductivity Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Thermometer: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Turbidimeter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
ORP Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
DO Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Other:	**Filter / Filter Size:** 10 micron + .45 for dissolved metals

SAMPLING MEASUREMENTS

Time	Cum. Vol. (L)	Purge Rate (L/m)	Temp. (oC)	pH	Spec. Cond. (µS/cm)	Color	Turbidity & Sediment (NTU)	ORP (mV)	DO (mg/L)	Water Level (ft BMP)	Remarks
1043	-	.2	-	-	-	-	-	-	-	7.35	Pump is on
10:53	2	↓	28.89	6.92	42,400	clear	0.0	130	0.65	8.05

GROUNDWATER SAMPLING RECORD

PAGE 1 of 1

Project Number: 19125525 Project Name: Capano GW Sampling 3Q19 Date: 9/23/19	
Sample Number: MW-8	Starting Water Level (ft. BMP): 5.26
Sampling Location (well ID, etc.): MW-8	Casing Stickup (ft.): 1.2
Sampled by: CC	Starting Water Level (ft. BGL): 4.06
Measuring Point (MP) of Well: TOC/PVC	Total Depth (ft. BMP): 18.49
Screened Interval (ft. BGL): 13-18	Casing Diameter (in ID): 4
Filter Pack Interval (ft. BGL): 8-13	Casing Volume (gal.): 8.64

QUALITY ASSURANCE

METHODS (describe):

Cleaning Equipment: Dedicated Equipment

Purging: Peristaltic or bladder pump with dedicated tubing **Sampling:** Same

Disposal of Discharged Water: Bed 7

INSTRUMENTS (Indicate make, model, I.D.)

Water Level: ~~Keck~~ Solinst

pH Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Conductivity Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Thermometer: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Turbidimeter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
ORP Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
DO Meter: Horiba U-52	**Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Other:	**Filter / Filter Size:** 10 micron + 0.45 µ

Incorrect field pH readings were recorded the first day due to bad pH calibration solution from rental company (Farwest). Recalibrated and double check pH the next day. This is the correct field pH reading.

GROUNDWATER SAMPLING RECORD

Project Number: 18131309 **Project Name:** Copano Sludge Permit **Date:** 2/10/20

Sample Number: MW4-7A
Sampling Location (well ID, etc.): MW4-7A
Sampled by: VG
Measuring Point (MP) of Well: TOC/PVC
Screened Interval (ft. BGL): 9.5 - 14.5*
Filter Pack Interval (ft. BGL): -

Starting Water Level (ft. BMP): 5.06
Casing Stickup (ft.): 3.2*
Starting Water Level (ft. BGL):
Total Depth (ft. BMP): 16.06*
Casing Diameter (in ID): 3*
Casing Volume : gal = L

QUALITY ASSURANCE

METHODS (describe):

Cleaning Equipment: Triple wash and rinse (DI Water and Liquidnox), dedicated equipment.

Purging: Peristaltic or Bladder pump with dedicated tubing or disposable bailer **Sampling:** Same

Disposal of Discharged Water: Bed 2

INSTRUMENTS (Indicate make, model, I.D.)

Water Level: Keck
pH Meter: Horiba U-52 **Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Conductivity Meter: Horiba U-52 **Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Thermometer: Horiba U-52
Turbidimeter: Horiba U-52 **Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
ORP Meter: Horiba U-52 **Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
DO Meter: Horiba U-52 **Field Calibration:** Auto Calibration - 100-4 Horiba Calibration Solution
Other: **Filter / Filter Size:** 10 micron

Notes:
1) See map in Banks Report, Attachment 3
2) Distance to nearest waste disposal unit (Bed 1, 2, 3, or 4).
3) Location Method:
GPS-PP$_4$ - GPS coordinates, Pathfinder Office P.P.
AddMat - Address Matching
Map - Map Interpolation, Digital
NA - Coordinates were not able to be obtained
4) Horizontal Datum:
NA - Coordinates were not able to be obtained
84 - World Geodetic System 1984 (WGS 84)
5) Horizontal Accuracy:
P - Less than 2 meters
Q - Within 2 to 5 meters
U - Unknown
NA - Coordinates were not able to be obtained
6) Horizontal Reference:
WH - Wellhead
DR - Private driveway at the road
SC - Site center
NE-CL - Northeast corner of land parcel
E-CL - East corner of land parcel
S-CL - South corner of land parcel
NA - Coordinates were not able to be obtained
Notes - See additional comments regarding why the location was taken at a particular spot
7) Well Type:
Prv - Private. Well meets definition of private drinking water well in Texas Water Code, Section 26.408, and guidance document RG-428.
S - Stock
U - Unknown
Prv- - No appropriate well type available. Well is on private property and is not used for drinking water.
Prv* - No appropriate well type available. Well is on private property owned by Copano Enterprises LLC and is not in use.
8) Well Status:
O - Well is operational
C - Well is capped according to TDLR Rules
U - Well status is unknown
9) Well Use:
Non-Drinking Water
Drinking Water
Note: Copano Enterprises LLC has confirmed the wells on their property are not used for drinking water.
10) ft BGS - feet below ground surface
11) Aquifer Method:
X - Aquifer Code assumed from geographic location
D - Interpretation of Driller's Log
12) Address/contact information of well owner(s) and/or user(s) has been updated to reflect current property owner(s) information, as possible. Shaded cells indicate address/contact information of well owner(s) and/or user(s) was provided by the Banks well reports and is unable to be verified.
13) The Aransas County Groundwater Conservation District (ACGCD) was created by the 84th Texas Legislature and was running as a temporary organization in 2015. In 2016, county voters rejected the creation of a permanent Groundwater Conservation District. Therefore, ACGCD is non-existent.
14) Coordinates represent the intersection of 2nd St. and S. Verne St. in Rockport, TX.
15) Hwy 181 does not exist. Copano Retreat Rd. is off of Hwy 188 and is 2.65-miles long.
16) No state well record available. Owner not able to provide information.
17) Owners of the well were not able to be contacted. Could not confirm whether well was used for drinking water.
18) Shaded cells indicate the information was provided by the associated well report and is unable to be verified.

Disclaimer

The Banks Environmental Data Water Well Report was prepared from existing state water well databases and/or additional file data/records research conducted at the state agency and the U.S. Geological Survey. Banks Environmental Data has performed a thorough and diligent search of all groundwater well information provided and recorded. All mapped locations are based on information obtained from the source. Although Banks performs quality assurance and quality control on all research projects, we recognize that any inaccuracies of the records and mapped well locations could possibly be traced to the appropriate regulatory authority or the actual driller. It may be possible that some water well schedules and logs have never been submitted to the regulatory authority by the water driller and, thus, may explain the possible unaccountability of privately drilled wells. It is uncertain if the above listing provides 100% of the existing wells within the area of review. Therefore, Banks Environmental Data cannot fully guarantee the accuracy of the data or well location(s) of those maps and records maintained by the regulatory authorities.

Texas Water Well Drillers Board P. O. Box 13087 Austin, Texas 78711

1) OWNER Stephen Bodnar (Name) Address RFD#2 Box 334 (Street or RFD) TAFT (City) TX. (State) 78390 (Zip)

2) LOCATION OF WELL: County Aransas 14 miles in N.W. (N.E., S.W., etc.) direction from Rockport (Town)

Driller must complete the legal description to the right with distance and direction from two intersecting section or survey lines, or he must locate and identify the well on an official Quarter- or Half-Scale Texas County General Highway Map and attach the map to this form.

☐ Legal description:
Section No. _____ Block No. _____ Township _____
Abstract No. _____ Survey Name _____
Distance and direction from two intersecting section or survey lines _____
☑ See attached map.

3) TYPE OF WORK (Check): ☑ New Well ☐ Deepening ☐ Reconditioning ☐ Plugging

4) PROPOSED USE (Check): ☑ Domestic ☐ Industrial ☐ Public Supply ☐ Irrigation ☐ Test Well ☐ Other _____

5) DRILLING METHOD (Check): ☑ Mud Rotary ☐ Air Hammer ☐ Driven ☐ Bored ☐ Air Rotary ☐ Cable Tool ☐ Jetted ☐ Other _____

6) WELL LOG:

Date drilled 4-18-84

DIAMETER OF HOLE

Dia. (in.)	From (ft.)	To (ft.)
6 3/4	Surface	278

7) BOREHOLE COMPLETION:
☐ Open Hole ☐ Straight Wall ☐ Underreamed
☑ Gravel Packed ☐ Other _____
If Gravel Packed give interval . . . from 258 ft. to 278 ft.

From (ft.)	To (ft.)	Description and color of formation material
0	5	Black dirt
5	20	Clay
20	30	Sand
30	55	Clay
55	65	Sand
65	100	Clay
100	120	Sand
120	150	Clay
150	170	Sand
170	200	Clay
200	220	Sand
220	235	Clay
235	245	Sand
245	260	Clay
260	278	Sand

8) CASING, BLANK PIPE, AND WELL SCREEN DATA:

Dia. (in.)	New or Used	Steel, Plastic, etc. Perf., Slotted, etc. Screen Mgf., if commercial	Setting (ft.) From	Setting (ft.) To	Gage Casing Screen
4	N	PVC	0	258	
4	N	PVC -Perf	258	278	

CEMENTING DATA
Cemented from _____ ft. to _____ ft.
Method used _____
Cemented by _____ (Company or Individual)

9) WATER LEVEL:
Static level 1 ft. below land surface Date 4-18-84
Artesian flow _____ gpm. Date _____

10) PACKERS: Type Depth

RECEIVED
JUN 20 1984
DEPT. OF WATER RESOURCES

11) TYPE PUMP:
☐ Turbine ☐ Jet ☐ Submersible ☐ Cylinder
☐ Other _____
Depth to pump bowls, cylinder, jet, etc., _____ ft.

12) WELL TESTS:
☐ Type Test: ☐ Pump ☐ Bailer ☑ Jetted ☐ Estimated
Yield: 60 gpm with 0 ft. drawdown after 1 hrs.

13) WATER QUALITY:
Did you knowingly penetrate any strata which contained undesirable water? ☐ Yes ☑ No
If yes, submit "REPORT OF UNDESIRABLE WATER"
Type of water? _____ Depth of strata _____
Was a chemical analysis made? ☐ Yes ☑ No

(Use reverse side if necessary)

I hereby certify that this well was drilled by me (or under my supervision) and that each and all of the statements herein are true to the best of my knowledge and belief.

WATER WELL REPORT

ATTENTION OWNER: *Confidentiality Privilege Notice on Reverse Side*

Texas Water Well Drillers Board P. O. Box 13087 Austin, Texas 78711

1) OWNER J. J. Parker (Name) Address (Street or RFD) Taft (City) TX. (State) 78390 (Zip)

2) LOCATION OF WELL: County Aransas 14 miles in N. W. (N.E., S.W., etc.) direction from Rockport (Town)

Driller must complete the legal description to the right with distance and direction from two intersecting section or survey lines, or he must locate and identify the well on an official Quarter- or Half-Scale Texas County General Highway Map and attach the map to this form.

☐ Legal description:
Section No. _____ Block No. _____ Township _____
Abstract No. _____ Survey Name _____
Distance and direction from two intersecting section or survey lines _____
☑ See attached map.

3) TYPE OF WORK (Check):
☑ New Well ☐ Deepening ☐ Reconditioning ☐ Plugging

4) PROPOSED USE (Check):
☑ Domestic ☐ Industrial ☐ Public Supply ☐ Irrigation ☐ Test Well ☐ Other _____

5) DRILLING METHOD (Check):
☑ Mud Rotary ☐ Air Hammer ☐ Driven ☐ Bored ☐ Air Rotary ☐ Cable Tool ☐ Jetted ☐ Other _____

6) WELL LOG:
Date drilled 4-19-84

DIAMETER OF HOLE

Dia. (in.)	From (ft.)	To (ft.)
6 3/4	Surface	275

7) BOREHOLE COMPLETION:
☐ Open Hole ☐ Straight Wall ☐ Underreamed
☑ Gravel Packed ☐ Other _____
If Gravel Packed give interval . . . from 255 ft. to 275 ft.

From (ft.)	To (ft.)	Description and color of formation material
0	5	Black dirt
5	20	Clay
20	30	Sand
30	55	Clay
55	65	Sand
65	100	Clay
100	120	Sand
120	150	Clay
150	170	Sand
170	200	Clay
200	220	Sand
220	235	Clay
235	245	Sand
245	260	Clay
260	275	Sand

8) CASING, BLANK PIPE, AND WELL SCREEN DATA:

Dia. (in.)	New or Used	Steel, Plastic, etc. Perf., Slotted, etc. Screen Mgf., if commercial	Setting (ft.) From	Setting (ft.) To	Gage Casing Screen
4	N	PVC	0	255	
4	N	PVC - Perf	255	275	

CEMENTING DATA
Cemented from _____ ft. to _____ ft.
Method used _____
Cemented by _____ (Company or Individual)

9) WATER LEVEL:
Static level 1 ft. below land surface Date 4-14-84
Artesian flow _____ gpm. Date _____

10) PACKERS: Type Depth

RECEIVED
JUN 20 1984
DEPT. OF
WATER RESOURCES
(Use Reverse Side If Necessary)

11) TYPE PUMP:
☐ Turbine ☐ Jet ☐ Submersible ☐ Cylinder
☐ Other _____
Depth to pump bowls, cylinder, jet, etc., _____ ft.

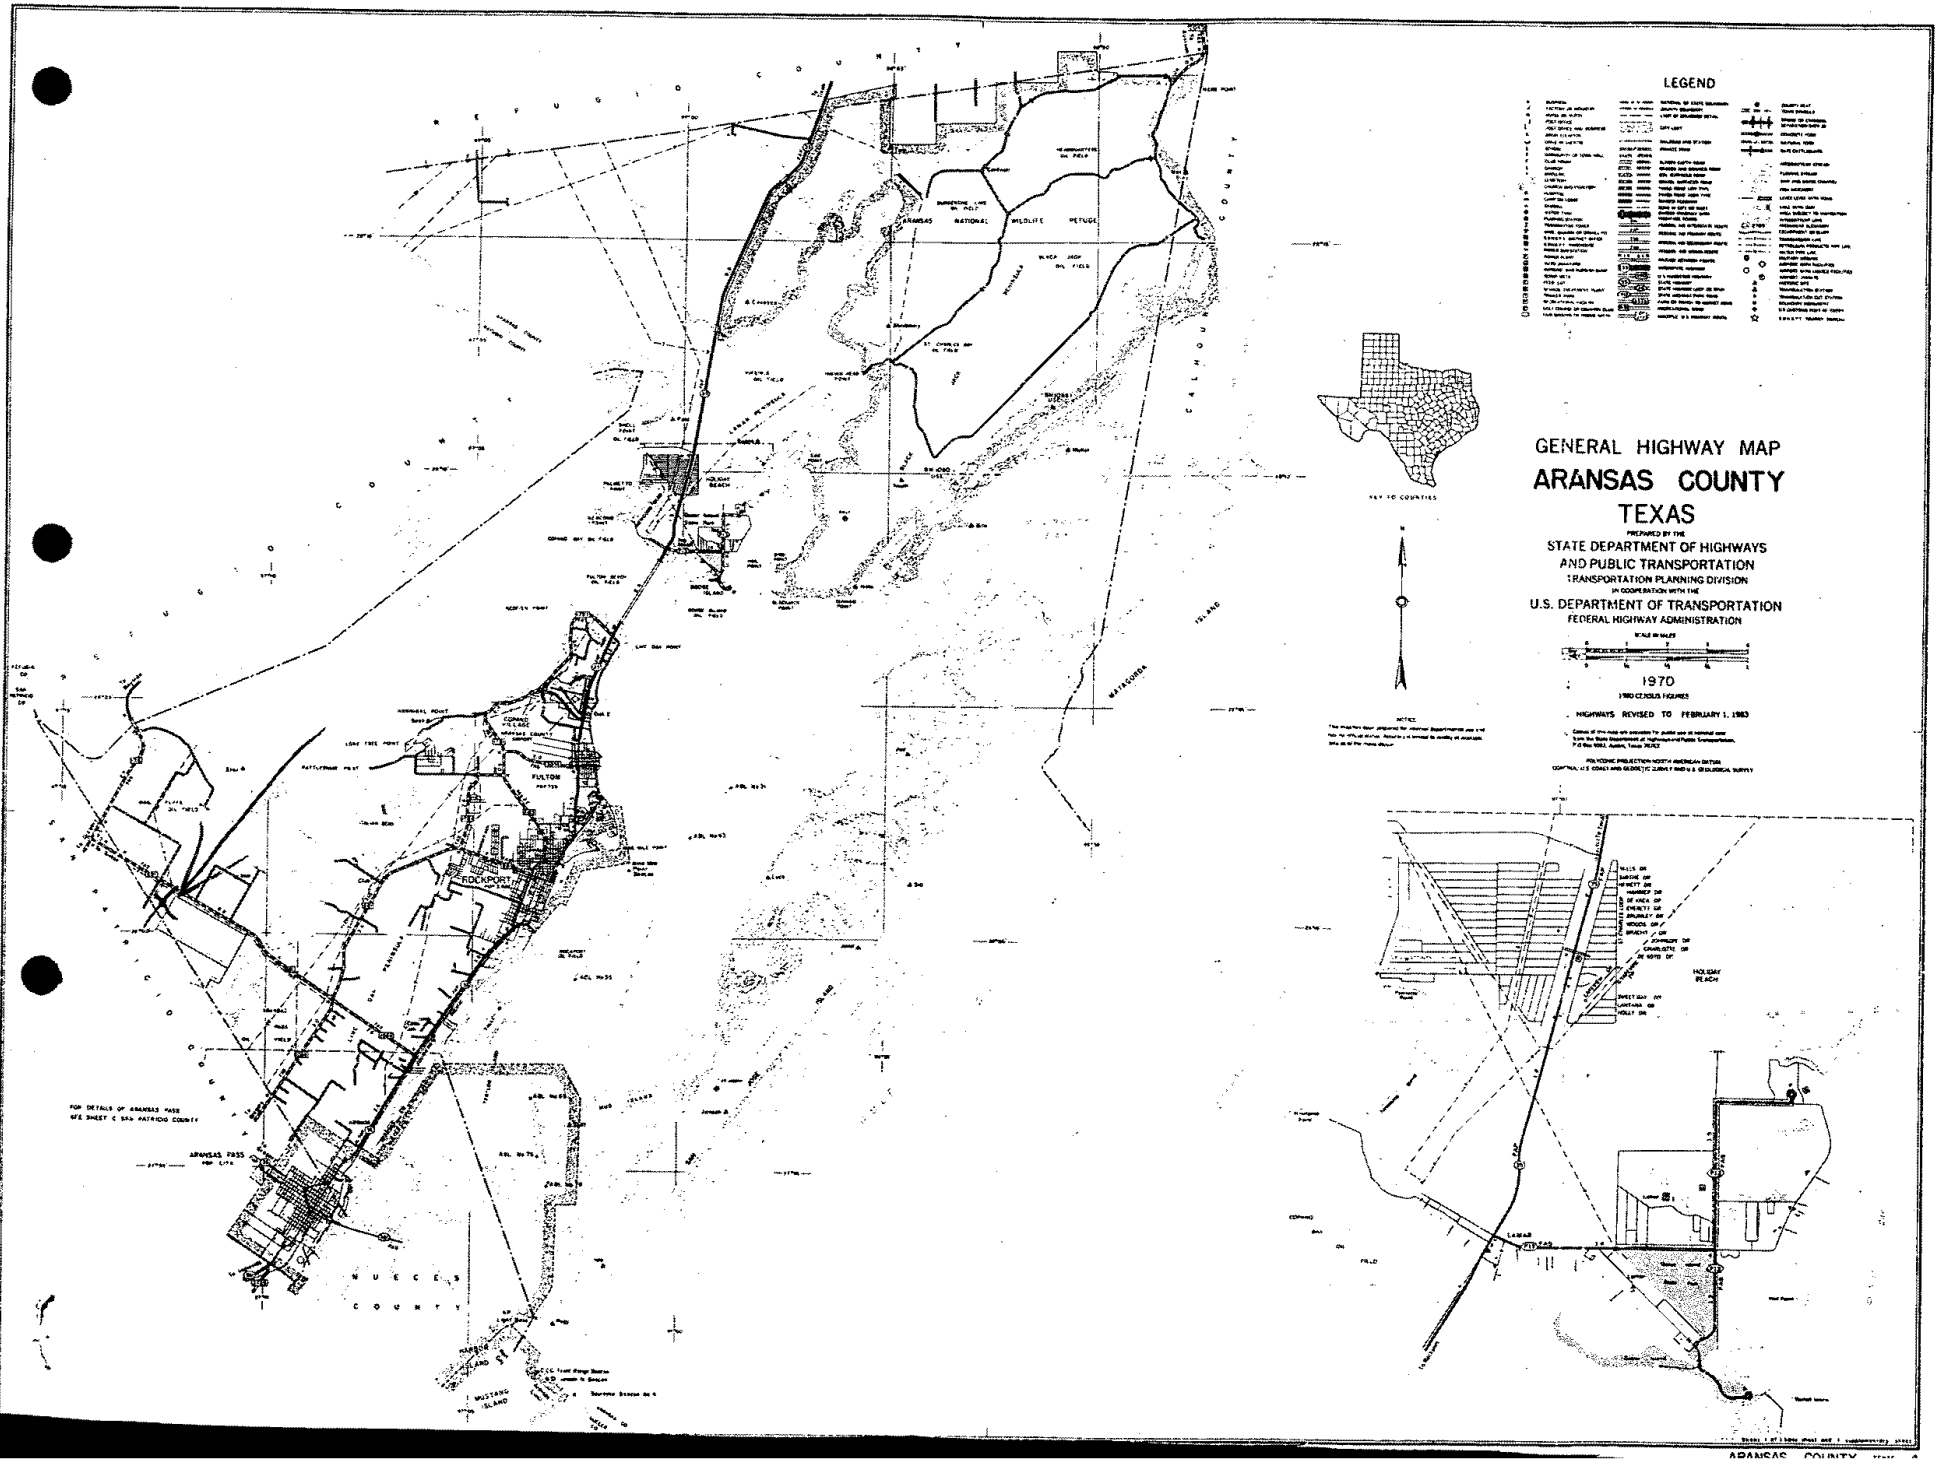
12) WELL TESTS:
☐ Type Test: ☐ Pump ☐ Bailer ☑ Jetted ☐ Estimated
Yield: 60 gpm with 0 ft. drawdown after 1 hrs.

13) WATER QUALITY:
Did you knowingly penetrate any strata which contained undesirable water? ☐ Yes ☑ No
If yes, submit "REPORT OF UNDESIRABLE WATER"
Type of water? _____ Depth of strata _____
Was a chemical analysis made? ☐ Yes ☑ No

I hereby certify that this well was drilled by me (or under my supervision) and that each and all of the statements herein are true to the best of my knowledge and belief.

COMPANY NAME H+C Water Well Drlg. (Type or Print) Water Well Driller's License No. 2290

ADDRESS P.O. Box 223 (Street or RFD) Petty (City) TX. (State) 78146 (Zip)



(Signed) Steve P. Carroll (Licensed Water Well Driller) (Signed) _____ (Registered Driller Trainee)

Please attach electric log, chemical analysis, and other pertinent information, if available.

1) OWNER Resource Management (Name) Address P.O. Box 72954, Corpus Christi, Tx 78472 (Street or RFD) (City) (State) (Zip)

2) LOCATION OF WELL:
County Aransas 3 miles in S (N.E., S.W., etc.) direction from Rockport (Town)

Driller must complete the legal description to the right with distance and direction from two intersecting section or survey lines, or he must locate and identify the well on an official Quarter- or Half-Scale Texas County General Highway Map and attach the map to this form.

☐ Legal description:
Section No. _____ Block No. _____ Township _____
Abstract No. _____ Survey Name _____
Distance and direction from two intersecting section or survey lines _____
☒ See attached map.

3) TYPE OF WORK (Check):
☒ New Well ☐ Deepening ☐ Reconditioning ☐ Plugging

4) PROPOSED USE (Check):
☐ Domestic ☒ Industrial ☐ Public Supply ☐ Irrigation ☐ Test Well ☐ Other _____

5) DRILLING METHOD (Check):
☒ Mud Rotary ☐ Air Hammer ☐ Driven ☐ Bored ☐ Air Rotary ☐ Cable Tool ☐ Jetted ☐ Other _____

6) WELL LOG:
Date drilled 11-29-84

DIAMETER OF HOLE Dia. (in.)	From (ft.)	To (ft.)
6 3/4	Surface	200

From (ft.)	To (ft.)	Description and color of formation material
0-	28	Top soil and shell
28-	50	Sandy shell
50-	120	Shale
120-	140	Sand
140-	157	Shale
157-	200	Sand

7) BOREHOLE COMPLETION:
☐ Open Hole ☒ Straight Wall ☐ Underreamed
☐ Gravel Packed ☐ Other _____
If Gravel Packed give interval . . . from _____ ft. to _____ ft.

8) CASING, BLANK PIPE, AND WELL SCREEN DATA:

Dia. (in.)	New or Used	Steel, Plastic, etc. Perf., Slotted, etc. Screen Mgf., if commercial	Setting (ft.) From	Setting (ft.) To	Gage Casing Screen
4	N	PVC Casing	0-	160	
4	N	PVC Screen	160-	200	

9) CEMENTING DATA (Rule 319.44(b))
Cemented from 15 ft. to surface ft.
_____ ft. to _____ ft.
Method used _____
Cemented by Martin Water Wells

10) SURFACE COMPLETION
☐ Specified Surface Slab Installed (Rule 319.44(c))
☐ Pitless Adapter Used (Rule 319.44(d))
☒ Approved Alternative Procedure Used (Rule 319.71)

11) WATER LEVEL:
Static level 9 ft. below land surface Date 11-29-84
Artesian flow _____ gpm. Date _____

1) OWNER:
Person having well drilled Jacques Valley (Name) Address 547 Crayton (Street or RFD) (City) (State)

Landowner (Name) Same Address Corpus Christi, Tx. 78418 (Street or RFD) (City) (State)

2) LOCATION OF WELL:
County San Patricio, 7 miles in N.E. (N.E., S.W., etc.) direction from Gregory, Tex (Town)

Locate by sketch map showing landmarks, roads, creeks, hiway number, etc.* Copano Bay Retreat, COPANO BAY, WELL, CARANCHO, North, PASS, CREEK, HIGHSIDE, 77, (Use reverse side if necessary)

or Give legal location with distances and directions from adjacent sections or survey lines.

Labor _____ League _____

Block _____ Survey _____

Abstract No. _____

(NW¼ NE¼ SW¼ SE¼) of Section _____

3) TYPE OF WORK (Check):
✓ New Well | Deepening | Reconditioning | Plugging

4) PROPOSED USE (Check):
✓ Domestic | Industrial | Municipal | Irrigation | Test Well | Other

5) TYPE OF WELL (Check):
✓ Rotary | Driven | Dug | Cable | Jetted | Bored

6) WELL LOG:
Diameter of hole 6 1/8 in. Depth drilled 215 ft. Depth of completed well 215 ft. Date drilled 5-5-76

All measurements made from 0 ft. above ground level.

From (ft.)	To (ft.)	Description and color of formation material
	80	shale
80	95	sand
95	195	shale
195	215	sand

9) Casing:
Type: Old | ✓ New | Steel | ✓ Plastic | Other

Cemented from _____ ft. to _____ ft.

Diameter (inches)	Setting From (ft.)	Setting To (ft.)	Gage
4 1/2 od	0	215	Sched 40

10) SCREEN:
Type _____

Perforated | ✓ Slotted

Diameter (inches)	Setting From (ft.)	Setting To (ft.)	Slot Size
4 1/2 od	195	215	.016

(Use reverse side if necessary)

7) COMPLETION (Check):
✓ Straight wall | Gravel packed | Other | Under reamed | Open Hole

8) WATER LEVEL:
Static level 2 ft. below land surface Date 5-6-76

Artesian pressure _____ lbs. per square inch Date _____

Depth to pump bowls, cylinder, jet, etc., _____ ft. below land surface.

11) WELL TESTS:
Was a pump test made? Yes No If yes, by whom? _____

Yield: _____ gpm with _____ ft. drawdown after _____ hrs.

Bailer test _____ gpm with _____ ft. drawdown after _____ hrs.

Artesian flow _____ gpm

Temperature of water _____

12) WATER QUALITY:
Was a chemical analysis made? Yes ✓ No

Did any strata contain undesirable water? Yes ✓ No

Type of water? salty depth of strata 20 ft

I hereby certify that this well was drilled by me (or under my supervision) and that each and all of the statements herein are true to the best of my knowledge and belief.

NAME Ben H. Welty (Type or Print) Water Well Drillers Registration No. 543

COMMENT ____

I hereby certify that this well was drilled by me (or under my supervision) and that each and all of the statements herein are true to the best of my knowledge and belief. I understand that failure to complete items 1 thru 15 will result in the log(s) being returned for completion and resubmittal.

COMPANY NAME B.T. Sikes Water Wells Inc. (Type or print) **WELL DRILLER'S LICENSE NO.** 2244

ADDRESS RR 2 Box 52 (Street or RFD) Mathis (City) TX (State) 78368 (Zip)

(Signed) B. T. Sikes (Licensed Well Driller) **(Signed)** B. T. Sikes (Registered Driller)

Please attach electric log, chemical analysis, and other pertinent information, if available.

TNRCC-0199 (Rev. 05-21-96) *White - TNRCC Yellow - DRILLER Pink - WELL OWNER*

STATE OF TEXAS WELL REPORT for Tracking #485920

Owner:	**JOHNNY GALVAN**	Owner Well #:	**No Data**
Address:	**601 KING FISHER CREEK AUSTIN , TX 78748**	Grid #:	**79-63-7**
Well Location:	**261 LEO MILLER ROAD TAFT, TX**	Latitude:	**28° 00' 42.57" N**

Appendix 7

Aquifer Testing Data

Hydraulic slug tests were conducted on four wells to estimate the hydraulic conductivity of the GWBUs. For Zone A, hydraulic slug tests were conducted on one upgradient well (MW-6R) and one downgradient well (MW3-4). For Zone B, hydraulic slug tests were conducted on one upgradient well (WM-6RB) and one downgradient well (MW3-4B). Refer to Figure 5A-1 and 5A-2 for an illustration of the well locations.

For Zone A, the estimated hydraulic conductivity ranged from 7.0 x 10-4 centimeters per second (cm/s) to 1.6 x 10-3 cm/s. For Zone B, the estimated hydraulic conductivity ranged from 1.2 x 10-4 cm/s to 3.9 x 10-4 cm/s.

Field records, slug test calculations, and plots are provided on the following pages. Transducers (level loggers) were utilized during slug tests to provide water level data.

SLUG TEST FORM

SLUG TEST FORM

Project Number: 19134560-0000 **Project Name:** Logan Slug Test **Date:** 12-19-19

WELL INFORMATION

Well ID: MW3-4B	Measuring Point (MP) of Well: TOC
Well Diameter (Inner, in.): 2	MP Height (ft. above ground level):
Well Depth (ft. BGL): 44.50	Slug IN or OUT: OUT
Screened Interval (ft. BGL): -	Static Water Level Prior to Testing (ft. BMP): 6.31
Starting Water Level (ft. BMP): 6.02	Date Static Water Level Taken: 12-19-19

SLUG TEST INFORMATION

Slug Type (stainless, PVC, Teflon): PVC	Expected Well Response (+/- ft.):
Slug Length (ft.): 5'	Transducer Depth (ft. BMP): 25'
Slug Diameter (Inner, in.): 1.5"	Test Performed by: Greg Logan Jr.
Slug Volume (cu. ft.): 0.06 CF / 0.5 gallons	

QUALITY ASSURANCE

Decontamination Procedures:	Li-NOX & rinse
Disposal of Discharged Water:	Roof 2

SLUG TEST MEASUREMENTS

START TIME: 12:25 **END TIME:** 12:58 **Water Level at Completion (ft. BMP):** 6.02

Minutes Since Start	Water Level (ft. BMP)	Minutes Since Start	Water Level (ft. BMP)	Minutes Since Start	Water Level (ft. BMP)	Minutes Since Start	Water Level (ft. BMP)

APPENDIX 7
SLUG TEST RESULTS
CE RANCH LLC
COPANO PROPERTY

Well ID	Test Date	Test Type	Location	Hydrogeologic Unit	Aquifer Type	Analysis Method	Saturated Thickness (feet)	Results	
								K^1 (cm/sec)	T^2 (cm^2/sec)
MW-6R	12/19/2019	Slug-In	Upgradient	Zone A	Confined	Bouwer-Rice	5	1.6E-03	2.49E-01
MW-6R	12/19/2019	Slug-Out	Upgradient	Zone A	Confined	Bouwer-Rice	5	1.3E-03	1.92E-01
							MW-6R Average Results:	**1.4E-03**	**2.21E-01**
MW-6RB	12/18/2019	Slug In	Upgradient	Zone B	Confined	Bouwer-Rice	7.6	3.6E-04	8.24E-02
MW-6RB	12/18/2019	Slug Out	Upgradient	Zone B	Confined	Bouwer-Rice	7.6	3.9E-04	8.92E-02
							MW-6RB Average Results:	**3.7E-04**	**8.58E-02**
MW3-4	12/19/2019	Slug Out	Downgradient	Zone A	Confined	Bouwer-Rice	2.5	7.1E-04	5.41E-02
MW3-4	12/19/2019	Slug In	Downgradient	Zone A	Confined	Bouwer-Rice	2.5	7.0E-04	5.30E-02
							MW3-4 Average Results:	**7.0E-04**	**5.36E-02**
MW3-4B	12/19/2019	Slug Out	Downgradient	Zone B	Confined	Bouwer-Rice	12.2	2.0E-04	7.47E-02
MW3-4B	12/19/2019	Slug In	Downgradient	Zone B	Confined	Bouwer-Rice	12.2	1.2E-04	4.37E-02
							MW3-4B Average Results:	**1.6E-04**	**5.92E-02**

Notes:

1) K- Hydraulic Conductivity measured in centimeters per second

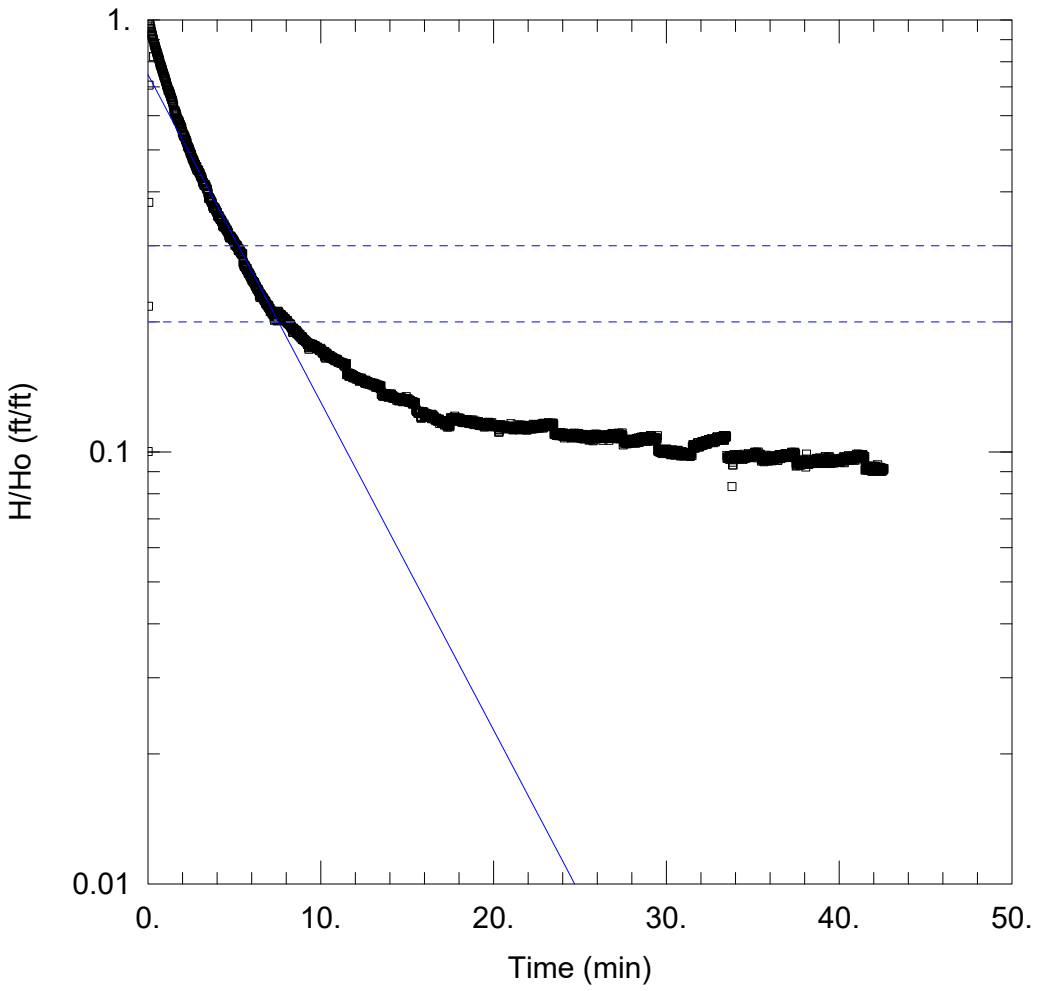
2) T - Transmissivity measured in centimeters squared per second

MW-6R SLUG-IN

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 1
Test Well: MW3-4
Test Date: 12/19/2019

AQUIFER DATA



Saturated Thickness: 3. ft
Anisotropy Ratio (Kz/Kr): 0.1

WELL DATA (MW-6R)

Initial Displacement: 0.92 ft
Total Well Penetration Depth: 17. ft
Casing Radius: 0.167 ft
Static Water Column Height: 9.94 ft
Screen Length: 5. ft
Well Radius: 0.167 ft
Gravel Pack Porosity: 0.3

SOLUTION

Aquifer Model: Confined
Solution Method: Bouwer-Rice
K = 0.001633 cm/sec
y0 = 0.5677 ft

MW-6R SLUG-OUT

PROJECT INFORMATION

SOLUTION

Slug Test
Aquifer Model: Confined
Solution Method: Bouwer-Rice
ln(Re/rw): 3.293

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.001633	cm/sec
y0	0.5677	ft

T = K*b = 0.1493 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 1
Test Date: 12/19/2019
Test Well: MW-6R

AQUIFER DATA

Saturated Thickness: 3. ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW-6R

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 0.8 ft
Static Water Column Height: 9.94 ft
Casing Radius: 0.167 ft
Well Radius: 0.167 ft
Well Skin Radius: 0.6875 ft
Screen Length: 5. ft
Total Well Penetration Depth: 17. ft
Corrected Casing Radius (Bouwer-Rice Method): 0.167 ft
Gravel Pack Porosity: 0.3

No. of Observations: 2557

SOLUTION

Slug Test
Aquifer Model: Confined

Solution Method: Bouwer-Rice
ln(Re/rw): 3.293

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.001262	cm/sec
y0	0.5981	ft

T = K*b = 0.1154 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 1
Test Date: 12/18/2019
Test Well: MW-6RB

AQUIFER DATA

Saturated Thickness: 7.6 ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW-6RB

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 3.34 ft
Static Water Column Height: 40.67 ft
Casing Radius: 0.083 ft
Well Radius: 0.083 ft
Well Skin Radius: 0.667 ft
Screen Length: 10. ft
Total Well Penetration Depth: 46.3 ft
Corrected Casing Radius (Bouwer-Rice Method): 0.083 ft
Gravel Pack Porosity: 0.3

No. of Observations: 3501

SOLUTION

Slug Test
Aquifer Model: Confined
Solution Method: Bouwer-Rice
ln(Re/rw): 4.651

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.0003557	cm/sec
y0	2.328	ft

T = K*b = 0.0824 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 1
Test Date: 12/18/2019
Test Well: MW-6RB

AQUIFER DATA

Saturated Thickness: 7.6 ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW-6RB

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 2.65 ft
Static Water Column Height: 40.67 ft
Casing Radius: 0.083 ft
Well Radius: 0.083 ft
Well Skin Radius: 0.667 ft
Screen Length: 10. ft
Total Well Penetration Depth: 46.3 ft
Corrected Casing Radius (Bouwer-Rice Method): 0.083 ft
Gravel Pack Porosity: 0.3

No. of Observations: 2993

SOLUTION

Slug Test
Aquifer Model: Confined
Solution Method: Bouwer-Rice
ln(Re/rw): 4.651

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.0003852	cm/sec
y0	2.332	ft

T = K*b = 0.08923 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 3
Test Date: 12/19/2019
Test Well: MW3-4

AQUIFER DATA

Saturated Thickness: 2.5 ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW3-4

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 0.83 ft
Static Water Column Height: 8.78 ft
Casing Radius: 0.167 ft
Well Radius: 0.167 ft
Well Skin Radius: 0.6875 ft
Screen Length: 2.5 ft
Total Well Penetration Depth: 11. ft
Corrected Casing Radius (Bouwer-Rice Method): 0.167 ft
Gravel Pack Porosity: 0.3

No. of Observations: 3490

SOLUTION

Slug Test
Aquifer Model: Confined
Solution Method: Bouwer-Rice
ln(Re/rw): 2.757

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.0007099	cm/sec
y0	0.5882	ft

T = K*b = 0.05409 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 3
Test Date: 12/19/2019
Test Well: MW3-4

AQUIFER DATA

Saturated Thickness: 2.5 ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW3-4

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 0.8 ft
Static Water Column Height: 8.78 ft
Casing Radius: 0.167 ft
Well Radius: 0.167 ft
Well Skin Radius: 0.6875 ft
Screen Length: 2.5 ft
Total Well Penetration Depth: 11. ft
Corrected Casing Radius (Bouwer-Rice Method): 0.167 ft
Gravel Pack Porosity: 0.3

No. of Observations: 2998

SOLUTION

Slug Test
Aquifer Model: Confined
Solution Method: Bouwer-Rice
ln(Re/rw): 2.757

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.0006957	cm/sec
y0	0.61	ft

T = K*b = 0.05301 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 3
Test Date: 12/19/2019
Test Well: MW3-4B

AQUIFER DATA

Saturated Thickness: 12.2 ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW3-4B

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 3.48 ft
Static Water Column Height: 38.98 ft
Casing Radius: 0.083 ft
Well Radius: 0.083 ft
Well Skin Radius: 0.667 ft
Screen Length: 15. ft
Total Well Penetration Depth: 42.5 ft
Corrected Casing Radius (Bouwer-Rice Method): 0.083 ft
Gravel Pack Porosity: 0.3

No. of Observations: 3491

SOLUTION

Slug Test
Aquifer Model: Confined
Solution Method: Bouwer-Rice
ln(Re/rw): 4.712

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.000201	cm/sec
y0	2.109	ft

T = K*b = 0.07473 cm²/sec

Data Set: C:\Users\ccarter\Golder Associates\19134560,Alcoa Copano APAR and SLERA - Project Files\5 Technic

PROJECT INFORMATION

Company: Golder
Client: Copano
Project: 19134560
Location: Copano Bed 3
Test Date: 12/19/2019
Test Well: MW3-4B

AQUIFER DATA

Saturated Thickness: 12.2 ft
Anisotropy Ratio (Kz/Kr): 0.1

SLUG TEST WELL DATA

Test Well: MW3-4B

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 3.11 ft
Static Water Column Height: 38.98 ft
Casing Radius: 0.083 ft
Well Radius: 0.083 ft
Well Skin Radius: 0.667 ft
Screen Length: 15. ft
Total Well Penetration Depth: 42.5 ft
Corrected Casing Radius (Bouwer-Rice Method): 0.083 ft
Gravel Pack Porosity: 0.3

No. of Observations: 1870

Laboratory Data Packages and Data Usability Summary

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Detailed validation results for each data package are included with this DUS. Non-detected results (ND) are reported as less than the value of the sample detection limit (SDL) as defined by the TRRP rule. Analytes detected between the SDL and the method quantitation limit (MQL) were qualified with a “J-flag” to denote that the reported values were considered to be estimated.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 1906231

Samples: 11 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW4-3 (MW-303) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30% except for Aluminum and Ammonium-N. This is flagged appropriately in Table 2.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 1906277

Samples: 5 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

No field duplicate samples were collected during this sampling event.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 1906206

Samples: 16 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B), except for Nitrate - N. This is flagged accordingly in Table 2.

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW3-2 (MW-202) analysis. Table 3 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30% except for Aluminum and Flouride. This is flagged appropriately in Table 3.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 1907312

Samples: 1 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

No field duplicate samples were collected during this sampling event.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

Samples: 16 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW-5 (MW-303) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30%.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 1909161

Samples: 13 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW3-4 (MW-202) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30%.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

Laboratory Work Order 1909142

Samples: 8 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW3-1 (MW-101) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30% except for Fluoride. This is flagged appropriately in Table 2.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

Samples: 5 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed but sample receipt temperatures were not within the acceptance criteria of 4±2°C. This is appropriately flagged in Table 2. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW3-7 (MW-103) analysis. Table 3 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30%, except for Dissolved Aluminum.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

Laboratory Work Order 1912030

Samples: 13 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW4-4 (MW-102) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30%, except for Lead.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

Laboratory Work Order 2002114

Samples: 5 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW3-7B (MW-205) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30%, except for Dissolved Nickel, Dissolved Vanadium, and Aluminum. This is appropriately flagged in Table 2.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 2002060

Samples: 11 Groundwater

Preservation and Holding Times

Samples were evaluated for agreement with the chain-of-custody (COC). Samples were received in appropriate containers in good condition. The COC was properly completed and sample receipt temperatures were within the acceptance criteria of 4±2°C. Samples were preserved in the field as specified in SW-846 Table 2-40(A) and 2-40(B). Samples were prepared and analyzed within holding times as specified in SW-846 Table 2-40(A) and 2-40(B).

Calibrations

According to the LRCs, initial calibration data met all standards for all analysis.

Blanks

The laboratory method blank was non-detect for the analyses requested.

Laboratory Control Samples

The LCS recovery met the project measurement quality objectives for the analyses requested.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs met project objectives for the analyses requested.

Field Precision

One field duplicate sample was collected during this sampling event from MW-3R (MW-202) analysis. Table 2 summarizes groundwater duplicate precision for detected results.

Field duplicate precision met the project measurement quality objective for RPDs of <30%, except for Aluminum, Mercury, and Nitrate-N. This is appropriately flagged in Table 2.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in the groundwater at the affected property.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 2005136

Samples: 8 Surface Water, 8 Sediment

Preservation and Holding Times

Samples were evaluated for agreement with the C-O-C. Samples were received in appropriate containers in good condition. The C-O-C was properly completed. Sample receipt temperatures were within the acceptance criteria of ≤ 6° C. Samples were preserved properly. All holding times were met.

Calibrations

According to the LRCs, all initial and continuing calibration results were acceptable.

Blanks

Method blanks were reviewed. Sample results within five times of the blank concentrations were qualified with ”U” as similar to the blank. Analytes detected in the method blanks are presented in Table 3. Data are qualified as shown in Table 2.

Laboratory Control Samples (LCS)

All LCS or LCS/LCS duplicate recoveries and relative percent differences (RPDs) were acceptable.

Matrix Spike/Matrix Spike Duplicates (MS/MSD)

All MS/MSD samples were on batch (non-project) samples and were not evaluated.

Serial Dilutions/Post Digestion Spikes

All serial dilution and post digestion spikes samples were on batch (non-project) samples and were not evaluated.

Field Precision

Two field duplicate sample pairs were collected on the surface water samples and two field duplicate pairs were collected on the sediment samples. Field duplicate precision is evaluated using 30 RPD or two times the MQL as the criteria for surface water samples. Field duplicate precision is evaluated using 50 RPD or three times the MQL as the criteria for sediment samples. Data for field duplicate analyses are evaluated only if both samples in the duplicate pair have a concentration greater than the MQL. Field duplicate precision outside the TRRP-13 criteria are listed in Table 4. Data are qualified as shown in Tables 2 and 4.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in surface water and sediment at the affected property.

APPENDIX 10
LABORATORY DATA PACKAGES AND DATA USABILITY SUMMARY

Affected Property Assessment Report

Copano Site
Aransas and San Patricio County, Texas

Laboratory Work Order 1911260

Samples: 56 Soil

Preservation and Holding Times

Samples were evaluated for agreement with the C-O-C. Samples were received in appropriate containers in good condition. The C-o-C was properly completed. Sample receipt temperatures were within the acceptance criteria of ≤ 6° C. Samples were preserved properly. All holding times were met.

Calibrations

According to the LRCs, all initial and continuing calibration results were acceptable.

Blanks

Method blanks were reviewed. Sample results within five times of the blank concentrations were qualified with ”U” as similar to the blank. Analytes detected in the method blanks are presented in Table 3. No results were qualified.

Laboratory Control Samples (LCS)

All LCS or LCS/LCS duplicate recoveries and relative percent differences (RPDs) were acceptable.

Matrix Spike/Matrix Spike Duplicates (MS/MSD)

Most MS/MSD recoveries and RPDs were acceptable. Results that were outside of the acceptance criteria are listed in Table 4. Batch (non-project) data were not evaluated. If the spiking amount was less than four times the concentration in the unspiked parent sample, the MS/MSD data may not represent the matrix effect and were not evaluated. Data are qualified as shown in Tables 2 and 4.

Serial Dilutions/Post Digestion Spikes

Most serial dilution RPDs were acceptable. Results that were outside of the acceptance criteria of ≤ 10% are listed in Table 5. Data are qualified as shown in Tables 2 and 5. All post digestion spike recoveries were acceptable.

Analytical Duplicates

Most analytical RPDs were within laboratory acceptance criteria. Results that were outside of the acceptance criteria are listed in Table 6. Data are qualified as shown in Tables 2 and 6.

Field Precision

Two field duplicate sample pairs were collected - SB39 and its field duplicate SB102 and SB42 and its field duplicate SB101. Field duplicate precision is evaluated using 50 RPD or three times the MQL as the criteria for soil samples. Data for field duplicate analyses are evaluated only if both samples in the

duplicate pair have a concentration greater than the MQL. Field duplicate precision outside the QAPP criteria are listed in Table 7. Data are qualified as shown in Tables 2 and 7.

SUMMARY

The analytical data are usable for the purpose of determining current COC concentrations in soil at the affected property.

RE: Copano GW 2Q19

Dear Kevin Dworsky:

DHL Analytical, Inc. received 10 sample(s) on 6/19/2019 for the analyses presented in the following report.

REVISION#1: This revision consists of adding Dissolved Uranium to the list of test parameters for all samples as per the client. Please replace the original report with this revised report.

There were no problems with the analyses and all data met requirements of NELAP except where noted in the Case Narrative. All non-NELAP methods will be identified accordingly in the case narrative and all estimated uncertainties of test results are within method or EPA specifications.

If you have any questions regarding these tests results, please feel free to call. Thank you for using DHL Analytical.

Sincerely,

John DuPont
General Manager

This report was performed under the accreditation of the State of Texas Laboratory Certification Number: T104704211-19-24

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

#[1]	A[2]	Description	Yes	No	NA[3]	NR[4]	ER#[5]
		Chain-of-Custody (C-O-C)					
R1	OI	**1)** Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				**R1-01**
		2) Were all departures from standard conditions described in an exception report?			X		
R2	OI	**Sample and Quality Control (QC) Identification**					
		1) Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		2) Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	**Test Reports**					
		1) Were all samples prepared and analyzed within holding times?	X				
		2) Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		3) Were calculations checked by a peer or supervisor?	X				
		4) Were all analyte identifications checked by a peer or supervisor?	X				
		5) Were sample detection limits reported for all analytes not detected?	X				
		6) Were all results for soil and sediment samples reported on a dry weight basis?			X		
		7) Were % moisture (or solids) reported for all soil and sediment samples?			X		
		8) Were bulk soils/solids samples for volatile analysis extracted with methanol per EPA Method 5035?			X		
		9) If required for the project, TICs reported?			X		
R4	O	**Surrogate Recovery Data**					
		1) Were surrogates added prior to extraction?			X		
		2) Were surrogate percent recoveries in all samples within the laboratory QC limits?			X		
R5	OI	**Test Reports/Summary Forms for Blank Samples**					
		1) Were appropriate type(s) of blanks analyzed?	X				
		2) Were blanks analyzed at the appropriate frequency?	X				
		3) Where method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		4) Were blank concentrations < MDL?	X				
		5) For analyte(s) detected in a blank sample, was the concentration, unadjusted for sample specific factors, in all associated field samples, **greater** than 10 times the concentration in the blank sample?			X		
R6	OI	**Laboratory Control Samples (LCS):**					
		1) Were all COCs included in the LCS?	X				
		2) Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		3) Were LCSs analyzed at the required frequency?	X				
		4) Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		5) Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		6) Was the LCSD RPD within QC limits (if applicable)?	X				
R7	OI	**Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Data**					
		1) Were the project/method specified analytes included in the MS and MSD?	X				
		2) Were MS/MSD analyzed at the appropriate frequency?	X				
		3) Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			**R7-03**
		4) Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	**Analytical Duplicate Data**					
		1) Were appropriate analytical duplicates analyzed for each matrix?	X				
		2) Were analytical duplicates analyzed at the appropriate frequency?	X				
		3) Were RPDs or relative standard deviations within the laboratory QC limits?	X				
R9	OI	**Method Quantitation Limits (MQLs):**					
		1) Are the MQLs for each method analyte included in the laboratory data package?	X				
		2) Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		3) Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	**Other Problems/Anomalies**					
		1) Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				**R10-01**
		2) Was applicable and available technology used to lower the SDL to minimize the matrix interference affects on the sample results?	X				
		3) Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X

Reviewer Name: Carlos Castro	**Laboratory Work Order:** 1906186
Prep Batch Number(s): See Prep Dates Report	**Run Batch:** See Analytical Dates Report

#[1]	A[2]	Description	Yes	No	NA[3]	NR[4]	ER#[5]
S1	OI	**Initial Calibration (ICAL)**					
		1) Were response factors and/or relative response factors for each analyte within QC limits?	X				
		2) Were percent RSDs or correlation coefficient criteria met?	X				
		3) Was the number of standards recommended in the method used for all analytes?	X				
		4) Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		5) Are ICAL data available for all instruments used?	X				
		6) Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	**Initial and Continuing calibration Verification (ICCV and CCV) and Continuing Calibration blank (CCB):**					
		1) Was the CCV analyzed at the method-required frequency?	X				
		2) Were percent differences for each analyte within the method-required QC limits?		X			**S2-02**
		3) Was the ICAL curve verified for each analyte?	X				
		4) Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	X				
S3	O	**Mass Spectral Tuning:**					
		1) Was the appropriate compound for the method used for tuning?	X				
		2) Were ion abundance data within the method-required QC limits?	X				
S4	O	**Internal Standards (IS):**					
		1) Were IS area counts and retention times within the method-required QC limits?		X			**S4-01**
S5	OI	**Raw Data (NELAC Section 5.5.10)**					
		1) Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		2) Were data associated with manual integrations flagged on the raw data?	X				
S6	O	**Dual Column Confirmation**					
		1) Did dual column confirmation results meet the method-required QC?			X		
S7	O	**Tentatively Identified Compounds (TICs):**					
		1) If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	**Interference Check Sample (ICS) Results:**					
		1) Were percent recoveries within method QC limits?	X				
S9	I	**Serial Dilutions, Post Digestion Spikes, and Method of Standard Additions**					
		1) Were percent differences, recoveries, and the linearity within the QC limits specified in the method?		X			**S9-01**
S10	OI	**Method Detection Limit (MDL) Studies**					
		1) Was a MDL study performed for each reported analyte?	X				
		2) Is the MDL either adjusted or supported by the analysis of DCSs?		X			**S10-02**
S11	OI	**Proficiency Test Reports:**					
		1) Was the lab's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	**Standards Documentation**					
		1) Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	**Compound/Analyte Identification Procedures**					
		1) Are the procedures for compound/analyte identification documented?	X				
S14	OI	**Demonstration of Analyst Competency (DOC)**					
		1) Was DOC conducted consistent with NELAC Chapter 5 – Appendix C?	X				
		2) Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	**Verification/Validation Documentation for Methods** (NELAC Chapter 5)					
		1) Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	**Laboratory Standard Operating Procedures (SOPs):**					
		1) Are laboratory SOPs current and on file for each method performed?	X				

1 Items identified by the letter "R" should be included in the laboratory data package submitted to the TCEQ in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
2 O = organic analyses; I = inorganic analyses (and general chemistry, when applicable).
3 NA = Not applicable.
4 NR = Not Reviewed.
5 ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Data Package Signature Page – RG-366/TRRP-13

This data package consists of:

This signature page, the laboratory review checklist, and the following reportable data:

R1 Field chain-of-custody documentation;
R2 Sample identification cross-reference;
R3 Test reports (analytical data sheets) for each environmental sample that includes:
  a) Items consistent with NELAC Chapter 5,
  b) dilution factors,
  c) preparation methods,
  d) cleanup methods, and
  e) if required for the project, tentatively identified compounds (TICs).
R4 Surrogate recovery data including:
  a) Calculated recovery (%R), and
  b) The laboratory's surrogate QC limits.
R5 Test reports/summary forms for blank samples;
R6 Test reports/summary forms for laboratory control samples (LCSs) including:
  a) LCS spiking amounts,
  b) Calculated %R for each analyte, and
  c) The laboratory's LCS QC limits.
R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
  a) Samples associated with the MS/MSD clearly identified,
  b) MS/MSD spiking amounts,
  c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
  d) Calculated %Rs and relative percent differences (RPDs), and
  e) The laboratory's MS/MSD QC limits
R8 Laboratory analytical duplicate (if applicable) recovery and precision:
  a) The amount of analyte measured in the duplicate,
  b) The calculated RPD, and
  c) The laboratory's QC limits for analytical duplicates.
R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix;
R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in the Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory is not accredited under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge that all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information or data affecting the quality of the data has been knowingly withheld.

This laboratory was last inspected by TCEQ on February 25-28 2019. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Method SW6020A - Metals Analysis (total & dissolved)
Method SW6020A - Uranium in Water Analysis (this parameter is not NELACP certified)
Method SW7470A - Mercury Analysis (total & dissolved)
Method E300 - Anions Analysis
Method M2320 B - Alkalinity Analysis
Method M4500-NH3-D - Ammonia Analysis
Method M2540C - TDS Analysis

Exception Report R1-01

The samples were received and log-in performed on 6/19/19. A total of 10 samples were received. For further login notes please refer to the Sample Receipt Checklist. The samples arrived in good condition and were properly packaged.

Exception Report R7-03

For Ammonia analysis performed on 6/20/19 the matrix spike duplicate recovery was slightly below control limits. This was due to matrix effect. This is flagged accordingly in the QC summary report. The sample selected for the matrix spike and matrix spike duplicate was from this work order. The LCS was within control limits. No further corrective actions were taken.

For Total and Dissolved Metals analyses performed on 6/21/19 and 6/20/19 (batches 91398 & 91399) the matrix spikes and/or matrix spike duplicate recoveries were out of control limits for Calcium or Dissolved Chromium. These are flagged accordingly. The sample selected for the matrix spike and matrix spike duplicate (batch 91398) was not from this work order. The sample selected for the matrix spike and matrix spike duplicate (batch 91399) was from this work order. The LCSs were within control limits for these analytes. No further corrective actions were taken.

Exception Report R10-01

For Anions analysis all samples were diluted prior to analysis due to the nature of the samples (concentration of Chloride).

For Uranium analysis the Dissolved Uranium results were slightly higher than the Total Uranium results for all samples (except for samples MW-3RB, MW-3R and MW-1). These are within the acceptable variation limits. No further corrective actions were taken.

Exception Report S2-02

For Total Metals analysis performed on 6/21/19 LCVL2-190621 and LCVL3-190621 were above control limits for Vanadium. These are flagged accordingly in the QC summary report. The associated CCVs were within control limits for this analyte. No further corrective actions were taken.

Exception Report S4-01

For Dissolved Metals analysis samples MW-7B, MW-7, MW-3RB and MW-3R had low responses for the internal standards Bismuth and Indium. This was due to matrix interference. The associated analytes (Antimony & Lead) may be biased high. No further corrective actions were taken.

For Dissolved Metals analysis samples MW-11B, MW-11, MW-101, MW-8 and MW-1 had low responses for the internal standard Bismuth. This was due to matrix interference. The associated analyte (Lead) may be biased high. No further corrective actions were taken.

Exception Report S9-01

For Total and Dissolved Metals analyses performed on 6/21/19 and 6/20/19 (batches 91398 & 91399) the PDS recoveries were out of control limits for a total of four analytes. These are flagged accordingly in the QC summary report. The serial dilutions were within control limits for these analytes. No further corrective actions were taken.

For Total Metals analysis performed on 6/21/19 (batch 91398) the RPD for the serial dilution was slightly above control limits for Potassium. This is flagged accordingly. The PDS was within control limits for this analyte. No further corrective actions were taken.

For Dissolved Mercury analysis performed on 6/20/19 (batch 91411) the PDS recovery was below control limits. This is flagged accordingly. The serial dilution was within control limits. No further corrective actions were taken.

Exception Report S10-02

For Anions analysis, the recovery of Fluoride for the Detectability Check Standard (DCS3-90659) was below the DHL Analytical internal control limits; the recovery meets TRRP specifications. This is flagged accordingly in the QC summary report. No further corrective actions were taken.

ANALYTICAL REPORT

July 18, 2019

DHL Analytical, Inc.

Sample Delivery Group: L1111620

Samples Received: 06/21/2019

Project Number:

Description:

Report To: John DuPont
2300 Double Creek Drive
Round Rock, TX 78664

Entire Report Reviewed By:

Donna Eidson
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace National is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDA	Minimum Detectable Activity.
Rec.	Recovery.
RER.	Replicate Error Ratio.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(T)	Tracer - A radioisotope of known concentration added to a solution of chemically equivalent radioisotopes at a known concentration to assist in monitoring the yield of the chemical separation.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description

The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

RE: Copano 2Q19

Dear Kevin Dworsky:

DHL Analytical, Inc. received 16 sample(s) on 6/20/2019 for the analyses presented in the following report.

REVISION#1: This revision consists of adding Dissolved Uranium to the list of test parameters for all samples as per the client. Please replace the original report with this revised report.

There were no problems with the analyses and all data met requirements of NELAP except where noted in the Case Narrative. All non-NELAP methods will be identified accordingly in the case narrative and all estimated uncertainties of test results are within method or EPA specifications.

If you have any questions regarding these tests results, please feel free to call. Thank you for using DHL Analytical.

Sincerely,

John DuPont
General Manager

This report was performed under the accreditation of the State of Texas Laboratory Certification Number: T104704211-19-24

ANALYTICAL METHODS AND SAMPLE REQUIREMENTS
CE RANCH LLC
COPANO PROPERTY

ANALYTE	METHOD	MINIMUM VOLUME	CONTAINER	PRESERVATION	HOLDING TIME[2]
Metals[1]	SW6020A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	6 months
Dissolved Metals[1]	SW6020A	250 mL	Plastic	Cool to ≤ 6°C	Filter at lab as soon as feasible with 0.45µ filter, then acidify with HNO3 to pH<2. Holdtime same as Metals.
Mercury	SW7470A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	28 days
Dissolved Mercury	SW7470A	250 mL	Plastic	Cool to ≤ 6°C	Filter at lab as soon as feasible with 0.45µ filter, then acidify with HNO3 to pH<2. Holdtime same as Mercury.
TDS	M2540C	500 mL	Plastic	Cool to ≤ 6°C	7 days
Ammonia Nitrogen	MH4500-NH3-D	250 mL	Plastic	H_2SO_4, Cool to ≤ 6°C	28 days
Radionuclides:					
Uranium	SW6020A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	6 months
Radium 226	SM7500Ra B M	500 mL	Plastic	HNO_3, Cool to ≤ 6°C	6 months
Radium 228	904	500 mL	Plastic	HNO_3, Cool to ≤ 6°C	6 months
Cations:					
Calcium	SW6020A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	28 days
Magnesium	SW6020A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	28 days
Sodium	SW6020A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	28 days
Potassium	SW6020A	250 mL	Plastic	HNO_3, Cool to ≤ 6°C	28 days
Anions:					
Chloride	E300	250 mL	Plastic	Cool to ≤ 6°C	28 days
Bicarbonate (alkalinity)	SM2320B	250 mL	Plastic	Cool to ≤ 6°C	14 days
Carbonate (alkalinity)	SM2320B	250 mL	Plastic	Cool to ≤ 6°C	14 days
Fluoride	E300	250 mL	Plastic	Cool to ≤ 6°C	28 days
Sulfate	E300	250 mL	Plastic	Cool to ≤ 6°C	28 days
Nitrate	E300	100 mL	Plastic	Cool to ≤ 6°C	48 hours

Notes:

1) Metals: Aluminum, Antimony, Arsenic, Chromium, Lead, Mercury, Nickel, Thallium, Vanadium

2) From time of sample collection

Laboratory Review Checklist: Reportable Data

Project Name: Copano 2Q19	**LRC Date:** 7/19/19
Reviewer Name: Carlos Castro	**Laboratory Work Order:** 1906206
Prep Batch Number(s): See Prep Dates Report	**Run Batch:** See Analytical Dates Report

#[1]	A[2]	Description	Yes	No	NA[3]	NR[4]	ER#[5]
		Chain-of-Custody (C-O-C)					
R1	OI	**1)** Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	**X**				**R1-01**
		2) Were all departures from standard conditions described in an exception report?			**X**		
R2	OI	**Sample and Quality Control (QC) Identification**					
		1) Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	**X**				
		2) Are all laboratory ID numbers cross-referenced to the corresponding QC data?	**X**				
R3	OI	**Test Reports**					
		1) Were all samples prepared and analyzed within holding times?	**X**				
		2) Other than those results < MQL, were all other raw values bracketed by calibration standards?	**X**				
		3) Were calculations checked by a peer or supervisor?	**X**				
		4) Were all analyte identifications checked by a peer or supervisor?	**X**				
		5) Were sample detection limits reported for all analytes not detected?	**X**				
		6) Were all results for soil and sediment samples reported on a dry weight basis?			**X**		
		7) Were % moisture (or solids) reported for all soil and sediment samples?			**X**		
		8) Were bulk soils/solids samples for volatile analysis extracted with methanol per EPA Method 5035?			**X**		
		9) If required for the project, TICs reported?			**X**		
R4	O	**Surrogate Recovery Data**					
		1) Were surrogates added prior to extraction?			**X**		
		2) Were surrogate percent recoveries in all samples within the laboratory QC limits?			**X**		
R5	OI	**Test Reports/Summary Forms for Blank Samples**					
		1) Were appropriate type(s) of blanks analyzed?	**X**				
		2) Were blanks analyzed at the appropriate frequency?	**X**				
		3) Where method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	**X**				
		4) Were blank concentrations < MDL?	**X**				
		5) For analyte(s) detected in a blank sample, was the concentration, unadjusted for sample specific factors, in all associated field samples, **greater** than 10 times the concentration in the blank sample?			**X**		
R6	OI	**Laboratory Control Samples (LCS):**					
		1) Were all COCs included in the LCS?	**X**				
		2) Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	**X**				
		3) Were LCSs analyzed at the required frequency?	**X**				
		4) Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	**X**				
		5) Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	**X**				
		6) Was the LCSD RPD within QC limits (if applicable)?	**X**				
R7	OI	**Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Data**					
		1) Were the project/method specified analytes included in the MS and MSD?	**X**				
		2) Were MS/MSD analyzed at the appropriate frequency?	**X**				
		3) Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		**X**			**R7-03**
		4) Were MS/MSD RPDs within laboratory QC limits?	**X**				
R8	OI	**Analytical Duplicate Data**					
		1) Were appropriate analytical duplicates analyzed for each matrix?	**X**				
		2) Were analytical duplicates analyzed at the appropriate frequency?	**X**				
		3) Were RPDs or relative standard deviations within the laboratory QC limits?	**X**				
R9	OI	**Method Quantitation Limits (MQLs):**					
		1) Are the MQLs for each method analyte included in the laboratory data package?	**X**				
		2) Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	**X**				
		3) Are unadjusted MQLs and DCSs included in the laboratory data package?	**X**				
R10	OI	**Other Problems/Anomalies**					
		1) Are all known problems/anomalies/special conditions noted in this LRC and ER?	**X**				**R10-01**
		2) Was applicable and available technology used to lower the SDL to minimize the matrix interference affects on the sample results?	**X**				
		3) Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	**X**				

Laboratory Name: DHL Analytical, Inc.

Laboratory Review Checklist (continued): Supporting Data

Project Name: Copano 2Q19	**LRC Date:** 7/19/19
Reviewer Name: Carlos Castro	**Laboratory Work Order:** 1906206
Prep Batch Number(s): See Prep Dates Report	**Run Batch:** See Analytical Dates Report

#[1]	A[2]	Description	Yes	No	NA[3]	NR[4]	ER#[5]
S1	OI	**Initial Calibration (ICAL)**					
		1) Were response factors and/or relative response factors for each analyte within QC limits?	X				
		2) Were percent RSDs or correlation coefficient criteria met?	X				
		3) Was the number of standards recommended in the method used for all analytes?	X				
		4) Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		5) Are ICAL data available for all instruments used?	X				
		6) Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	**Initial and Continuing calibration Verification (ICCV and CCV) and Continuing Calibration blank (CCB):**					
		1) Was the CCV analyzed at the method-required frequency?	X				
		2) Were percent differences for each analyte within the method-required QC limits?		X			**S2-02**
		3) Was the ICAL curve verified for each analyte?	X				
		4) Was the absolute value of the analyte concentration in the inorganic CCB < MDL?		X			**S2-04**
S3	O	**Mass Spectral Tuning:**					
		1) Was the appropriate compound for the method used for tuning?	X				
		2) Were ion abundance data within the method-required QC limits?	X				
S4	O	**Internal Standards (IS):**					
		1) Were IS area counts and retention times within the method-required QC limits?		X			**S4-01**
S5	OI	**Raw Data (NELAC Section 5.5.10)**					
		1) Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		2) Were data associated with manual integrations flagged on the raw data?	X				
S6	O	**Dual Column Confirmation**					
		1) Did dual column confirmation results meet the method-required QC?			X		
S7	O	**Tentatively Identified Compounds (TICs):**					
		1) If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	**Interference Check Sample (ICS) Results:**					
		1) Were percent recoveries within method QC limits?	X				
S9	I	**Serial Dilutions, Post Digestion Spikes, and Method of Standard Additions**					
		1) Were percent differences, recoveries, and the linearity within the QC limits specified in the method?		X			**S9-01**
S10	OI	**Method Detection Limit (MDL) Studies**					
		1) Was a MDL study performed for each reported analyte?	X				
		2) Is the MDL either adjusted or supported by the analysis of DCSs?		X			**S10-02**
S11	OI	**Proficiency Test Reports:**					
		1) Was the lab's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	**Standards Documentation**					
		1) Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	**Compound/Analyte Identification Procedures**					
		1) Are the procedures for compound/analyte identification documented?	X				
S14	OI	**Demonstration of Analyst Competency (DOC)**					
		1) Was DOC conducted consistent with NELAC Chapter 5 – Appendix C?	X				
		2) Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	**Verification/Validation Documentation for Methods** (NELAC Chapter 5)					
		1) Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	**Laboratory Standard Operating Procedures (SOPs):**					
		1) Are laboratory SOPs current and on file for each method performed?	X				

1 Items identified by the letter "R" should be included in the laboratory data package submitted to the TCEQ in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
2 O = organic analyses; I = inorganic analyses (and general chemistry, when applicable).
3 NA = Not applicable.
4 NR = Not Reviewed.
5 ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Data Package Signature Page – RG-366/TRRP-13

This data package consists of:

This signature page, the laboratory review checklist, and the following reportable data:

R1 Field chain-of-custody documentation;
R2 Sample identification cross-reference;
R3 Test reports (analytical data sheets) for each environmental sample that includes:
  a) Items consistent with NELAC Chapter 5,
  b) dilution factors,
  c) preparation methods,
  d) cleanup methods, and
  e) if required for the project, tentatively identified compounds (TICs).
R4 Surrogate recovery data including:
  a) Calculated recovery (%R), and
  b) The laboratory's surrogate QC limits.
R5 Test reports/summary forms for blank samples;
R6 Test reports/summary forms for laboratory control samples (LCSs) including:
  a) LCS spiking amounts,
  b) Calculated %R for each analyte, and
  c) The laboratory's LCS QC limits.
R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
  a) Samples associated with the MS/MSD clearly identified,
  b) MS/MSD spiking amounts,
  c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
  d) Calculated %Rs and relative percent differences (RPDs), and
  e) The laboratory's MS/MSD QC limits
R8 Laboratory analytical duplicate (if applicable) recovery and precision:
  a) The amount of analyte measured in the duplicate,
  b) The calculated RPD, and
  c) The laboratory's QC limits for analytical duplicates.
R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix;
R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in the Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory is not accredited under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge that all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information or data affecting the quality of the data has been knowingly withheld.

This laboratory was last inspected by TCEQ on February 25-28 2019. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Method SW6020A - Metals Analysis (total & dissolved)
Method SW6020A - Uranium in Water Analysis (this parameter is not NELACP certified)
Method SW7470A - Mercury Analysis (total & dissolved)
Method E300 - Anions Analysis
Method M2320 B - Alkalinity Analysis
Method M4500-NH3-D - Ammonia Analysis
Method M2540C - TDS Analysis
Sub-contract - Radium-228 and Radium-226 Analyses by Methods E904 and SM 7500 Ra B M. Analyzed at Pace Analytical.

Exception Report R1-01

The samples were received and log-in performed on 6/20/19. A total of 16 samples were received. One of the four coolers did not arrive at DHL Analytical due to FedEx error. The samples arrived in good condition and were properly packaged.

Exception Report R7-03

For Ammonia analysis performed on 6/21/19 the matrix spike and matrix spike duplicate recoveries were above control limits. This was due to matrix effect. These are flagged accordingly in the QC summary report. The sample selected for the matrix spike and matrix spike duplicate was from this work order. The LCS was within control limits. No further corrective actions were taken.

For Total Metals analysis performed on 6/25/19 (batch 91453) the matrix spike and matrix spike duplicate recoveries were out of control limits for four analytes. These are flagged accordingly. The sample selected for the matrix spike and matrix spike duplicate was not from this work order. The LCS was within control limits for these analytes. No further corrective actions were taken.

Exception Report R10-01

For Anions analysis all samples were diluted prior to analysis due to the nature of the samples (concentration of Chloride).

For Anions analysis samples MW-10, MW-5, MW-5B, MW3-1, MW3-2 and MW3-3 were analyzed outside of HoldTime for Nitrate-N. The Nitrate-N results for these samples are flagged with a "C" to designate this.

For Uranium analysis the Dissolved Uranium results were slightly higher than the Total Uranium results for 9 samples. These are within the acceptable variation limits. No further corrective actions were taken.

Exception Report S2-02

For Total Metals analysis performed on 6/25/19 LCVL1-190625 and LCVL2-190625 were above control limits for Vanadium. These are flagged accordingly in the QC summary report. The associated CCVs were within control limits for this analyte. No further corrective actions were taken.

Exception Report S2-04

For Total Metals analysis performed on 6/25/19 Vanadium was detected above the reporting limit in CCB1-190625. The associated samples may be biased high for this analyte. No further corrective actions were taken.

Exception Report S4-01

For Dissolved Metals analysis sample MW3-4B had the low response for the internal standard Bismuth. This was due to matrix interference. The associated analyte (Lead) may be biased high. No further corrective actions were taken.

Exception Report S9-01

For Dissolved Metals analysis performed on 6/26/19 (batch 91506) the PDS recovery was slightly below control limits for Nickel. This is flagged accordingly in the QC summary report. The serial dilution was within control limits for this analyte. No further corrective actions were taken.

For Dissolved Mercury analysis performed on 6/24/19 (batch 91459) the PDS recovery was below control limits. This was due to matrix effect. This is flagged accordingly. The serial dilution was within control limits. No further corrective actions were taken.

Exception Report S10-02

For Anions analysis, the recovery of Fluoride for the Detectability Check Standard (DCS3-90659) was below the DHL Analytical internal control limits; the recovery meets TRRP specifications. This is flagged accordingly in the QC summary report. No further corrective actions were taken.

Qualifiers:

ND - Not Detected at the SDL
J - Analyte detected between SDL and RL
B - Analyte detected in the associated Method Blank
DF- Dilution Factor
N - Parameter not NELAP certified
See Final Page of Report for MQLs and MDLs
S - Spike Recovery outside control limits
C - Sample Result or QC discussed in Case Narrative
RL - Reporting Limit (MQL adjusted for moisture and sample size)
SDL - Sample Detection Limit
E - TPH pattern not Gas or Diesel Range Pattern

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDA	Minimum Detectable Activity.
Rec.	Recovery.
RER	Replicate Error Ratio.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(T)	Tracer - A radioisotope of known concentration added to a solution of chemically equivalent radioisotopes at a known concentration to assist in monitoring the yield of the chemical separation.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
C1	Tracer recovery limits have been exceeded; values are outside upper control limits.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

RE: Copano GW 2Q19

Dear Kevin Dworsky:

DHL Analytical, Inc. received 11 sample(s) on 6/21/2019 for the analyses presented in the following report.

REVISION#1: This revision consists of adding Dissolved Uranium to the list of test parameters for all samples as per the client. Please replace the original report with this revised report.

There were no problems with the analyses and all data met requirements of NELAP except where noted in the Case Narrative. All non-NELAP methods will be identified accordingly in the case narrative and all estimated uncertainties of test results are within method or EPA specifications.

If you have any questions regarding these tests results, please feel free to call. Thank you for using DHL Analytical.

Sincerely,

John DuPont
General Manager

This report was performed under the accreditation of the State of Texas Laboratory Certification Number: T104704211-19-24

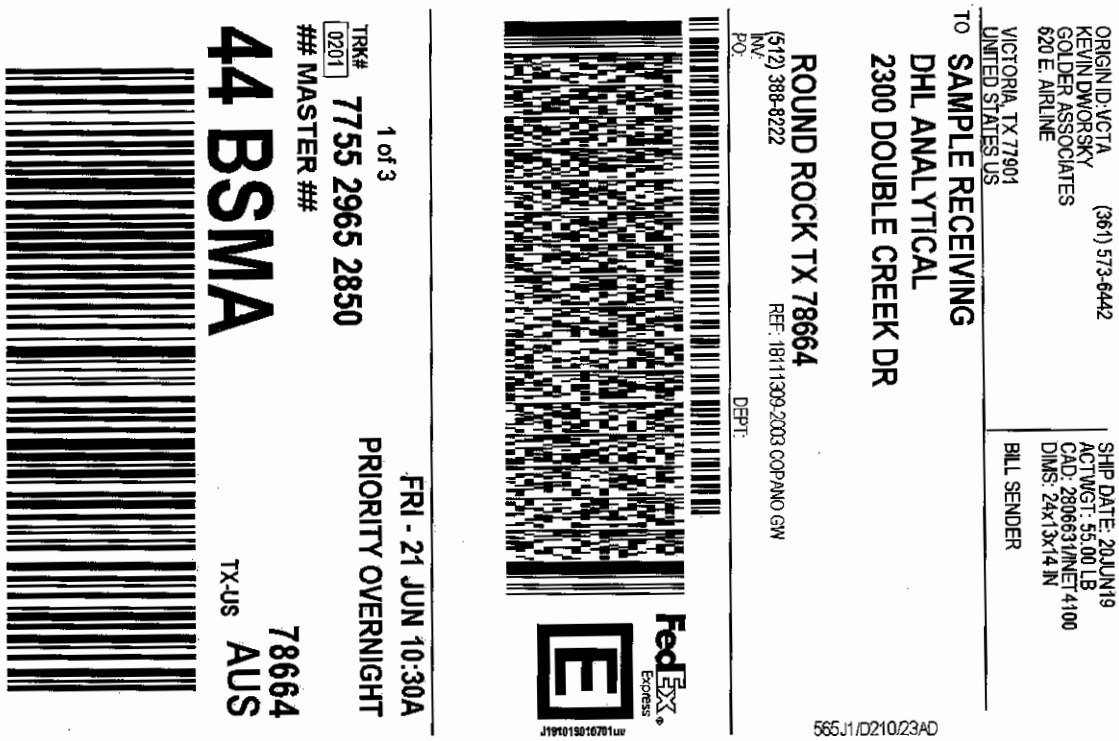
After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.



Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Laboratory Name: DHL Analytical, Inc.

Laboratory Review Checklist: Reportable Data

Project Name: Copano GW 2Q19	**LRC Date:** 7/18/19
Reviewer Name: Carlos Castro	**Laboratory Work Order:** 1906231
Prep Batch Number(s): See Prep Dates Report	**Run Batch:** See Analytical Dates Report

#[1]	A[2]	Description	Yes	No	NA[3]	NR[4]	ER#[5]
		Chain-of-Custody (C-O-C)					
R1	OI	**1)** Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	**X**				**R1-01**
		2) Were all departures from standard conditions described in an exception report?			**X**		
R2	OI	**Sample and Quality Control (QC) Identification**					
		1) Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	**X**				
		2) Are all laboratory ID numbers cross-referenced to the corresponding QC data?	**X**				
R3	OI	**Test Reports**					
		1) Were all samples prepared and analyzed within holding times?	**X**				
		2) Other than those results < MQL, were all other raw values bracketed by calibration standards?	**X**				
		3) Were calculations checked by a peer or supervisor?	**X**				
		4) Were all analyte identifications checked by a peer or supervisor?	**X**				
		5) Were sample detection limits reported for all analytes not detected?	**X**				
		6) Were all results for soil and sediment samples reported on a dry weight basis?			**X**		
		7) Were % moisture (or solids) reported for all soil and sediment samples?			**X**		
		8) Were bulk soils/solids samples for volatile analysis extracted with methanol per EPA Method 5035?			**X**		
		9) If required for the project, TICs reported?			**X**		
R4	O	**Surrogate Recovery Data**					
		1) Were surrogates added prior to extraction?			**X**		
		2) Were surrogate percent recoveries in all samples within the laboratory QC limits?			**X**		
R5	OI	**Test Reports/Summary Forms for Blank Samples**					
		1) Were appropriate type(s) of blanks analyzed?	**X**				
		2) Were blanks analyzed at the appropriate frequency?	**X**				
		3) Where method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	**X**				
		4) Were blank concentrations < MDL?	**X**				
		5) For analyte(s) detected in a blank sample, was the concentration, unadjusted for sample specific factors, in all associated field samples, **greater** than 10 times the concentration in the blank sample?			**X**		
R6	OI	**Laboratory Control Samples (LCS):**					
		1) Were all COCs included in the LCS?	**X**				
		2) Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	**X**				
		3) Were LCSs analyzed at the required frequency?	**X**				
		4) Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	**X**				
		5) Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	**X**				
		6) Was the LCSD RPD within QC limits (if applicable)?	**X**				
R7	OI	**Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Data**					
		1) Were the project/method specified analytes included in the MS and MSD?	**X**				
		2) Were MS/MSD analyzed at the appropriate frequency?	**X**				
		3) Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		**X**			**R7-03**
		4) Were MS/MSD RPDs within laboratory QC limits?	**X**				
R8	OI	**Analytical Duplicate Data**					
		1) Were appropriate analytical duplicates analyzed for each matrix?	**X**				
		2) Were analytical duplicates analyzed at the appropriate frequency?	**X**				
		3) Were RPDs or relative standard deviations within the laboratory QC limits?	**X**				
R9	OI	**Method Quantitation Limits (MQLs):**					
		1) Are the MQLs for each method analyte included in the laboratory data package?	**X**				
		2) Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	**X**				
		3) Are unadjusted MQLs and DCSs included in the laboratory data package?	**X**				
R10	OI	**Other Problems/Anomalies**					
		1) Are all known problems/anomalies/special conditions noted in this LRC and ER?	**X**				**R10-01**
		2) Was applicable and available technology used to lower the SDL to minimize the matrix interference affects on the sample results?	**X**				
		3) Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	**X**				

Laboratory Name: DHL Analytical, Inc.

Laboratory Review Checklist (continued): Supporting Data

Project Name: Copano GW 2Q19	**LRC Date:** 7/18/19
Reviewer Name: Carlos Castro	**Laboratory Work Order:** 1906231
Prep Batch Number(s): See Prep Dates Report	**Run Batch:** See Analytical Dates Report

#[1]	A[2]	Description	Yes	No	NA[3]	NR[4]	ER#[5]
S1	OI	**Initial Calibration (ICAL)**					
		1) Were response factors and/or relative response factors for each analyte within QC limits?	**X**				
		2) Were percent RSDs or correlation coefficient criteria met?	**X**				
		3) Was the number of standards recommended in the method used for all analytes?	**X**				
		4) Were all points generated between the lowest and highest standard used to calculate the curve?	**X**				
		5) Are ICAL data available for all instruments used?	**X**				
		6) Has the initial calibration curve been verified using an appropriate second source standard?	**X**				
S2	OI	**Initial and Continuing calibration Verification (ICCV and CCV) and Continuing Calibration blank (CCB):**					
		1) Was the CCV analyzed at the method-required frequency?	**X**				
		2) Were percent differences for each analyte within the method-required QC limits?		**X**			**S2-02**
		3) Was the ICAL curve verified for each analyte?	**X**				
		4) Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	**X**				
S3	O	**Mass Spectral Tuning:**					
		1) Was the appropriate compound for the method used for tuning?	**X**				
		2) Were ion abundance data within the method-required QC limits?	**X**				
S4	O	**Internal Standards (IS):**					
		1) Were IS area counts and retention times within the method-required QC limits?	**X**				
S5	OI	**Raw Data (NELAC Section 5.5.10)**					
		1) Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	**X**				
		2) Were data associated with manual integrations flagged on the raw data?	**X**				
S6	O	**Dual Column Confirmation**					
		1) Did dual column confirmation results meet the method-required QC?			**X**		
S7	O	**Tentatively Identified Compounds (TICs):**					
		1) If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			**X**		
S8	I	**Interference Check Sample (ICS) Results:**					
		1) Were percent recoveries within method QC limits?	**X**				
S9	I	**Serial Dilutions, Post Digestion Spikes, and Method of Standard Additions**					
		1) Were percent differences, recoveries, and the linearity within the QC limits specified in the method?		**X**			**S9-01**
S10	OI	**Method Detection Limit (MDL) Studies**					
		1) Was a MDL study performed for each reported analyte?	**X**				
		2) Is the MDL either adjusted or supported by the analysis of DCSs?	**X**				
S11	OI	**Proficiency Test Reports:**					
		1) Was the lab's performance acceptable on the applicable proficiency tests or evaluation studies?	**X**				
S12	OI	**Standards Documentation**					
		1) Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	**X**				
S13	OI	**Compound/Analyte Identification Procedures**					
		1) Are the procedures for compound/analyte identification documented?	**X**				
S14	OI	**Demonstration of Analyst Competency (DOC)**					
		1) Was DOC conducted consistent with NELAC Chapter 5 – Appendix C?	**X**				
		2) Is documentation of the analyst's competency up-to-date and on file?	**X**				
S15	OI	**Verification/Validation Documentation for Methods** (NELAC Chapter 5)					
		1) Are all the methods used to generate the data documented, verified, and validated, where applicable?	**X**				
S16	OI	**Laboratory Standard Operating Procedures (SOPs):**					
		1) Are laboratory SOPs current and on file for each method performed?	**X**				

1 Items identified by the letter "R" should be included in the laboratory data package submitted to the TCEQ in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
2 O = organic analyses; I = inorganic analyses (and general chemistry, when applicable).
3 NA = Not applicable.
4 NR = Not Reviewed.
5 ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Data Package Signature Page – RG-366/TRRP-13

This data package consists of:

This signature page, the laboratory review checklist, and the following reportable data:

R1 Field chain-of-custody documentation;
R2 Sample identification cross-reference;
R3 Test reports (analytical data sheets) for each environmental sample that includes:
  a) Items consistent with NELAC Chapter 5,
  b) dilution factors,
  c) preparation methods,
  d) cleanup methods, and
  e) if required for the project, tentatively identified compounds (TICs).
R4 Surrogate recovery data including:
  a) Calculated recovery (%R), and
  b) The laboratory's surrogate QC limits.
R5 Test reports/summary forms for blank samples;
R6 Test reports/summary forms for laboratory control samples (LCSs) including:
  a) LCS spiking amounts,
  b) Calculated %R for each analyte, and
  c) The laboratory's LCS QC limits.
R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
  a) Samples associated with the MS/MSD clearly identified,
  b) MS/MSD spiking amounts,
  c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
  d) Calculated %Rs and relative percent differences (RPDs), and
  e) The laboratory's MS/MSD QC limits
R8 Laboratory analytical duplicate (if applicable) recovery and precision:
  a) The amount of analyte measured in the duplicate,
  b) The calculated RPD, and
  c) The laboratory's QC limits for analytical duplicates.
R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix;
R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in the Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory is not accredited under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge that all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information or data affecting the quality of the data has been knowingly withheld.

This laboratory was last inspected by TCEQ on February 25-28 2019. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Lab Order: 1906231

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Method SW6020A - Metals Analysis (total & dissolved)
Method SW6020A - Uranium in Water Analysis (this parameter is not NELACP certified)
Method SW7470A - Mercury Analysis (total & dissolved)
Method E300 - Anions Analysis
Method M2320 B - Alkalinity Analysis
Method M4500-NH3-D - Ammonia Analysis
Method M2540C - TDS Analysis

Exception Report R1-01

The samples were received and log-in performed on 6/21/19. A total of 11 samples were received. The samples arrived in good condition and were properly packaged.

Exception Report R7-03

For Ammonia analysis performed on 6/28/19 the matrix spike and matrix spike duplicate recoveries were slightly above control limits. This was due to matrix effect. These are flagged accordingly in the QC summary report. The sample selected for the matrix spike and matrix spike duplicate was not from this work order. The LCS was within control limits. No further corrective actions were taken.

For Metals analysis performed on 6/26/19 (batch 91480) the matrix spike and matrix spike duplicate recoveries were out of control limits for three analytes. These are flagged accordingly. The sample selected for the matrix spike and matrix spike duplicate was from this work order. The LCS was within control limits for these analytes. No further corrective actions were taken.

Exception Report R10-01

For Anions analysis nine samples were diluted prior to analysis due to the nature of the samples (concentration of Chloride).

For Uranium analysis the Dissolved Uranium results were slightly higher than the Total Uranium results for samples MW4-3B, MW3-6 and MW-6RB. These are within the acceptable variation limits. No further corrective actions were taken.

Exception Report S2-02

For Metals analysis performed on 6/26/19 LCVL6-190626 was above control limits for Vanadium. This

is flagged accordingly in the QC summary report. The associated ICV6-190626 was within control limits for this analyte. No further corrective actions were taken.

Exception Report S9-01

For Metals analysis performed on 6/26/19 (batch 91506) the PDS recovery was slightly below control limits for Nickel. This is flagged accordingly in the QC summary report. The serial dilution was within control limits for this analyte. No further corrective actions were taken.

For Metals analysis performed on 6/26/19 (batch 91480) the RPD for the serial dilution was slightly above control limits for Lead. This is flagged accordingly. The PDS was within control limits for this analyte. No further corrective actions were taken.

For Mercury analysis performed on 6/24/19 (batch 91459) the PDS recoveries were below control limits. These were due to matrix effect. These are flagged accordingly. The serial dilutions were within control limits. No further corrective actions were taken.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Donna Eidson
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDA	Minimum Detectable Activity.
Rec.	Recovery.
RER	Replicate Error Ratio.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(T)	Tracer - A radioisotope of known concentration added to a solution of chemically equivalent radioisotopes at a known concentration to assist in monitoring the yield of the chemical separation.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description

The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

RE: Copano GW Sampling - 2Q19

Dear Kevin Dworsky:

DHL Analytical, Inc. received 5 sample(s) on 6/26/2019 for the analyses presented in the following report.

REVISION#1: This revision consists of adding Dissolved Uranium to the list of test parameters for all samples as per the client. Please replace the original report with this revised report.

There were no problems with the analyses and all data met requirements of NELAP except where noted in the Case Narrative. All non-NELAP methods will be identified accordingly in the case narrative and all estimated uncertainties of test results are within method or EPA specifications.

If you have any questions regarding these tests results, please feel free to call. Thank you for using DHL Analytical.

Sincerely,

John DuPont
General Manager

This report was performed under the accreditation of the State of Texas Laboratory Certification Number: T104704211-19-24

		2) Were ion abundance data within the method-required QC limits?	**X**				
S4	O	**Internal Standards (IS):**					
		1) Were IS area counts and retention times within the method-required QC limits?		**X**			**S4-01**
S5	OI	**Raw Data (NELAC Section 5.5.10)**					
		1) Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	**X**				
		2) Were data associated with manual integrations flagged on the raw data?	**X**				
S6	O	**Dual Column Confirmation**					
		1) Did dual column confirmation results meet the method-required QC?			**X**		
S7	O	**Tentatively Identified Compounds (TICs):**					
		1) If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			**X**		
S8	I	**Interference Check Sample (ICS) Results:**					
		1) Were percent recoveries within method QC limits?	**X**				
S9	I	**Serial Dilutions, Post Digestion Spikes, and Method of Standard Additions**					
		1) Were percent differences, recoveries, and the linearity within the QC limits specified in the method?	**X**				
S10	OI	**Method Detection Limit (MDL) Studies**					
		1) Was a MDL study performed for each reported analyte?	**X**				
		2) Is the MDL either adjusted or supported by the analysis of DCSs?	**X**				
S11	OI	**Proficiency Test Reports:**					
		1) Was the lab's performance acceptable on the applicable proficiency tests or evaluation studies?	**X**				
S12	OI	**Standards Documentation**					
		1) Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	**X**				
S13	OI	**Compound/Analyte Identification Procedures**					
		1) Are the procedures for compound/analyte identification documented?	**X**				
S14	OI	**Demonstration of Analyst Competency (DOC)**					
		1) Was DOC conducted consistent with NELAC Chapter 5 – Appendix C?	**X**				
		2) Is documentation of the analyst's competency up-to-date and on file?	**X**				
S15	OI	**Verification/Validation Documentation for Methods** (NELAC Chapter 5)					
		1) Are all the methods used to generate the data documented, verified, and validated, where applicable?	**X**				
S16	OI	**Laboratory Standard Operating Procedures (SOPs):**					
		1) Are laboratory SOPs current and on file for each method performed?	**X**				

1 Items identified by the letter "R" should be included in the laboratory data package submitted to the TCEQ in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
2 O = organic analyses; I = inorganic analyses (and general chemistry, when applicable).
3 NA = Not applicable.
4 NR = Not Reviewed.
5 ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Data Package Signature Page – RG-366/TRRP-13

This data package consists of:

This signature page, the laboratory review checklist, and the following reportable data:

R1 Field chain-of-custody documentation;
R2 Sample identification cross-reference;
R3 Test reports (analytical data sheets) for each environmental sample that includes:
  a) Items consistent with NELAC Chapter 5,
  b) dilution factors,
  c) preparation methods,
  d) cleanup methods, and
  e) if required for the project, tentatively identified compounds (TICs).
R4 Surrogate recovery data including:
  a) Calculated recovery (%R), and
  b) The laboratory's surrogate QC limits.
R5 Test reports/summary forms for blank samples;
R6 Test reports/summary forms for laboratory control samples (LCSs) including:
  a) LCS spiking amounts,
  b) Calculated %R for each analyte, and
  c) The laboratory's LCS QC limits.
R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
  a) Samples associated with the MS/MSD clearly identified,
  b) MS/MSD spiking amounts,
  c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
  d) Calculated %Rs and relative percent differences (RPDs), and
  e) The laboratory's MS/MSD QC limits
R8 Laboratory analytical duplicate (if applicable) recovery and precision:
  a) The amount of analyte measured in the duplicate,
  b) The calculated RPD, and
  c) The laboratory's QC limits for analytical duplicates.
R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix;
R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in the Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory is not accredited under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge that all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information or data affecting the quality of the data has been knowingly withheld.

This laboratory was last inspected by TCEQ on February 25-28 2019. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

DHL Analytical, Inc. **Date:** *28-Feb-20*

CLIENT: Golder
Project: Copano GW Sampling - 2Q19
Lab Order: 1906277

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Method SW6020A - Metals Analysis (total & dissolved)
Method SW6020A - Uranium in Water Analysis (this parameter is not NELACP certified)
Method SW7470A - Mercury Analysis (total & dissolved)
Sub-contract - Radium-228 and Radium-226 Analyses by Methods E904 and SM 7500 Ra B M. Analyzed at Pace Analytical.

Exception Report R1-01

The samples were received and log-in performed on 6/26/19. A total of 5 samples were received. The samples arrived in good condition and were properly packaged.

Exception Report R5-04

For Total Metals analysis performed on 7/2/19 Nickel was detected below the reporting limit in the method blank (MB-91562).

Exception Report R5-05

For Total Metals analysis (batch 91562) all samples may be biased high for Nickel. No further corrective actions were taken.

Exception Report R7-03

For Total Metals analysis performed on 7/2/19 (batch 91562) the matrix spike and matrix spike duplicate recoveries were out of control limits for a total of four analytes. These are flagged accordingly in the QC summary report. The sample selected for the matrix spike and matrix spike duplicate was not from this work order. The LCS was within control limits for these analytes. No further corrective actions were taken.

Exception Report R10-01

For Metals analysis the dissolved Aluminum and/or Vanadium results were slightly higher than the total Aluminum and/or Vanadium results for all samples. In addition, the Dissolved Uranium results were slightly higher than the Total Uranium results for samples MW3-7B and MW4-7 . These are within the acceptable variation limits. No further corrective actions were taken.

Exception Report S2-02

CLIENT:	Golder
Project:	Copano GW Sampling - 2Q19
Lab Order:	1906277

CASE NARRATIVE

For Total Metals analysis performed on 7/2/19 LCVL5-190702 was above control limits for Sodium. This is flagged accordingly in the QC summary report. The associated CCV5-190702 was within control limits for this analyte. No further corrective actions were taken.

Exception Report S4-01

For Total Metals analysis samples MW-4 and MW3-7 had low responses for the internal standards Bismuth and Indium. This was due to matrix interference. The associated analytes (Antimony & Lead) may be biased high. No further corrective actions were taken.

For Total Metals analysis samples MW-9, MW3-7B and MW4-7 had low responses for the internal standard Bismuth. This was due to matrix interference. The associated analyte (Lead) may be biased high. No further corrective actions were taken.

For Dissolved Metals analysis all samples had low responses for the internal standard Bismuth. This was due to matrix interference. The associated analyte (Lead) may be biased high. No further corrective actions were taken.

For Uranium in Water analysis all samples had low responses for the internal standard Bismuth. This was due to matrix interference. The associated analyte (Uranium) may be biased high. No further corrective actions were taken.

ANALYTICAL REPORT

July 26, 2019

DHL Analytical, Inc.

Sample Delivery Group:	L1114580
Samples Received:	07/01/2019
Project Number:	1906277
Description:	

Report To: John DuPont
2300 Double Creek Drive
Round Rock, TX 78664

Entire Report Reviewed By:

Donna Eidson
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.
